

GURJASH SINGH CHAWLA

chawlagurjash@gmail.com | (737) 363-5040 | [LinkedIn](#)

SUMMARY

Seasoned data engineer with experience in building nationwide-used big data applications and business intelligence tools. Core expertise in building high volume data pipelines, reporting solutions and distributed processing systems. Skilled in implementing optimized data architectures that drive business impact. Read more about my personal projects on Medium: [here](#)

EDUCATION

The University of Texas at Austin – McCombs School of Business

May 2025

Master of Science, Information Technology & Management | Merit Scholarship Recipient

Vellore Institute of Technology

Bachelor of Technology, Information Technology

Sep 2021

TECHNICAL SKILLS

Programming Languages & Libraries: Python, Scala, Golang, Shell Scripting, SQL, PL/SQL, Pandas

Big Data & Analytics: Spark, Hadoop, Hive, Flink, Airflow, Databricks, Kafka, Glue, Data Factory, QuickSight, Power BI, Informatica

Databases & Warehousing: PostgreSQL, Cassandra, Snowflake, Oracle DB, MySQL, MongoDB, Redshift

Infrastructure & Tools: AWS, Azure, Docker, Kubernetes, Git, Linux, Jira, Jenkins, Cloud Formation, Terraform, MCP

Certifications: AWS Certified Solutions Architect - Associate, Snowflake Hands-On Essentials: Data Warehousing

PROFESSIONAL EXPERIENCE

Dell Technologies (Austin, Texas)

Data Engineer (Capstone Project)

Dec 2024 - Present

- Remodeled Dell's sales quota system with an **Airflow** orchestration pipeline reducing manual data processing time by **50%**
- Engineered SQL-based workflows on Dell Data Lake (Greenplum) to process 10+ million records daily, optimizing query performance by **2x** and ensuring data availability for ML models

Ericsson

Big Data Engineer (Gurugram, India)

May 2022 - May 2024

- Built a custom ELK-based (Elastic Search, Logstash, Kibana) Business Intelligence tool for 5G operations, with **ETL pipelines** processing 50 million records daily, reducing network revenue leakages by **95%**—now a **flagship** Ericsson BI tool across Asia
- Developed a call muting insights generator, parsing ~1TB Parquet files every 5 minutes using **Apache Spark** and generating multiple reports, deployed to 105,000 cell towers via **Kubernetes** operators, accelerating network maintenance by **250%**
- Implemented a countrywide "Deep Sleep" optimization feature leveraging SQL data flows, Pandas & RESTful APIs, reducing power consumption and saving \$60K in monthly energy costs (**awarded at Glotel London and FutureNet Asia Innovation**)
- Led a cross-functional team to develop Ericsson Reporting System, a multi-channel analytics web application with **10+** dashboards monitoring **50+** KPIs, operating in 3 countries, generated **\$350k** revenue
- Optimized Spark Scala code, Spark-submit commands and cluster resource allocation, increasing processing speed by **25%** and reducing memory under-utilization by **98%**
- Mentored 5+ colleagues on multiple big data tools by conducting workshops on Elastic Search, Spark, HDFS and Cassandra

Data Engineer - SME (Kuala Lumpur, Malaysia)

Dec 2021 - Apr 2022

- Collaborated with Govt. of Malaysia's** DNB, gathered stakeholder's requirements and synthesized industry's first-of-its-kind billing and analytics big data application using Spark, handling monthly transactions of \$3 million+
- Modelled **SQL and NoSQL databases** to enable agent-specific data partitioning in a single system while preserving **data confidentiality**, accelerating site rollouts and achieving **20% monthly growth** in cell tower activations
- Upgraded existing health monitoring solution with **Python** automation and **KPI dashboards**, ensuring **100%** SLA compliance

Big Data Engineer (Remote, India)

Jul 2021 - Nov 2021

- Overhauled Oman's international roaming recharge system leveraging **Kafka**, reducing activation time from 5 hours to 13 minutes
- Migrated legacy file-based mediation systems to a **Nifi** and spark data pipeline, processing **2.5 million** subscriber's internet data with increased processing speed of **25%**
- Developed a Python based monitoring tool using Pandas, integrated to Grafana with dashboards, ensured **100%** SLA compliance

RELEVANT EXPERIENCE & TECHNICAL PROJECTS

Commodity Tracking MCP Server ([Project Link](#))

- Built an agentic AI system using Spark NLP, multiple LLMs, and MCP to analyze unstructured Reddit, YouTube, and news data; generated real-time commodity insights through dynamic config generation and contextual orchestration

Event Experience Analytics ([Project Link](#))

- Developed **Flink-based ETL pipelines** to process streaming IoT, social media, and sales data, enhancing attendee experience by delivering real-time insights using **AWS S3** for storage and **QuickSight** for interactive dashboards

Real-Time Financial Insights Platform ([Project Link](#))

- Engineered a real-time financial analytics platform on **Databricks** for instant CDC data transformation using **Debezium** and **Kafka**, delivering audit-ready insights, visualizing actionable metrics to drive customer engagement and personalized offers
