

GURRAM NIKHIL KUMAR

Data Analyst

Location: New Haven, CT, USA | Phone: (203) 667-0424 | Email: Nikhilkumar2k25@gmail.com | [LinkedIn](#)

SUMMARY

- 3+ years of experience as a Data Analyst with hands-on expertise in developing data pipelines, performing statistical analysis, and creating dynamic visualizations.
- Proficient in Python, SQL, R, and data visualization tools such as Power BI and Tableau.
- Expertise in cloud platforms including AWS (Redshift, DynamoDB, S3, Athena) for building scalable data solutions.
- Strong background in machine learning techniques, including Decision Trees, Random Forest, and KNN for predictive analytics and fraud detection.
- Skilled in ETL processes using tools like Apache Airflow, Talend, and dbt to automate and streamline data workflows.
- Experience in designing and implementing real-time data pipelines to process large datasets, ensuring data integrity and compliance.
- Proven ability to deliver actionable insights by transforming complex data into intuitive dashboards using Power BI, Tableau, and Excel.
- Strong understanding of financial reporting, healthcare compliance, and risk management systems with a focus on HIPAA, EMR, and fraud detection.
- Collaborative team player with experience working in Agile (Scrum) environments to meet project milestones and business goals.

SKILLS

- **Programming Languages:** Python, SQL, R
- **Databases & Data Warehouses:** PostgreSQL, SQL Server, MySQL, Snowflake, Teradata, BigQuery
- **Data Visualization:** Power BI, Tableau, Advanced Excel
- **Libraries & Frameworks:** NumPy, Pandas, Matplotlib, Plotly, Seaborn, Streamlit, FastAPI, NLTK
- **Data Engineering:** Alteryx, Talend, Informatica, Apache Airflow, dbt
- **Cloud Platforms:** AWS (Redshift, DynamoDB, S3, Athena, Lambda)
- **Methodologies:** SDLC, Agile (Scrum), Waterfall
- **Version Control:** Git, GitHub
- **ML Techniques:** Regression, KNN, Decision Tree, Naive Bayes, Random Forest
- **Healthcare Tools & Technologies:** HIPAA, EMR, HER
- **Analytical Skills:** Data Mining, Data Cleansing, Statistical Analysis, Data Visualization, Text Mining, ETL, Data Wrangling, Data Warehousing, Time Series Analysis, A/B Testing, SAP, SAS

WORK EXPERIENCE

CVS Health

February 2025 to Present

Data Analyst

- Healthcare Compliance and Risk Management System: Currently contributing to the development of a healthcare compliance and risk management system by implementing machine learning models to monitor healthcare operations, ensuring compliance with HIPAA and other healthcare regulations.
- Utilized AWS services like Redshift and DynamoDB for building real-time data pipelines to monitor healthcare data, ensuring data integrity and compliance in operational processes.
- Employed Python, R, and FastAPI to build scalable and efficient APIs for integrating real-time compliance data across multiple systems and enabling immediate response to risk factors.
- Developed interactive dashboards using Tableau and Power BI to visualize compliance and risk metrics, providing actionable insights for healthcare providers to mitigate potential risks and ensure regulatory adherence.

CVS Health

July 2024 to December 2024

Data Analyst Intern

- Healthcare Fraud Detection System: Contributed to the development of a fraud detection system by implementing machine learning models like Decision Trees and Random Forest to analyze healthcare transaction data, identifying suspicious activities and fraudulent claims.
- Assisted in creating real-time data pipelines on AWS using Lambda and DynamoDB to streamline the processing of healthcare transaction data and ensure timely detection of fraudulent patterns.
- Collaborated with the data engineering team to clean, preprocess, and transform large datasets in Snowflake and BigQuery, ensuring the accuracy and completeness of data for analysis.
- Utilized Python and R to perform statistical analysis and time series analysis, identifying anomalies and trends in healthcare transactions that could indicate fraud.
- Developed interactive visualizations in Power BI to provide insights into fraudulent patterns, enabling stakeholders to take immediate action and reduce financial losses.
- Participated in Agile (Scrum) teams, contributing to regular sprints, ensuring that milestones for fraud detection model development and deployment were met on time.

Data Analyst

- Automated Financial Reporting System: Spearheaded the development of an automated financial reporting solution by extracting, transforming, and loading (ETL) financial data using Python, SQL, and Apache Airflow, streamlining the reporting process for enhanced efficiency and accuracy.
- Created robust data pipelines to centralize and process financial data from diverse accounting systems, utilizing PostgreSQL and SQL Server to ensure consistency and reliable data storage.
- Designed and deployed automated financial reports and dashboards using Power BI and Excel, providing real-time insights and enabling executives to make data-driven decisions.
- Conducted detailed statistical analysis and data mining on financial datasets to uncover meaningful trends and irregularities, improving the accuracy of financial forecasts.
- Worked closely with stakeholders to capture reporting requirements and ensure financial reports met organizational standards and business needs.
- Developed and optimized data warehousing solutions to store large volumes of financial data efficiently, enhancing the accessibility and retrieval of key business metrics.
- Regularly performed data quality assessments and ensured the integrity of financial data, addressing inconsistencies and minimizing errors.
- Built dynamic and interactive financial dashboards using Tableau, enabling stakeholders to visualize data and access key metrics independently.
- Adhered to SDLC principles, ensuring the timely and successful delivery of the financial reporting system within the project scope and budget.

PROJECTS**Customer Segmentation & Analysis**

- Built and maintained real-time data pipelines using AWS Lambda and Redshift to process large-scale customer data.
- Utilized KNN and Random Forest machine learning algorithms to segment customers based on their behavior and purchasing patterns.
- Created interactive Power BI dashboards to visualize customer segments, allowing marketing teams to implement targeted campaigns effectively.

Healthcare Data Integration for Predictive Analytics

- Developed automated ETL pipelines using Talend and Apache Airflow to integrate diverse healthcare data sources for predictive analytics.
- Applied time series analysis techniques using Python and Pandas to forecast patient outcomes based on historical medical data.
- Leveraged Tableau to create real-time dashboards that track and predict patient health metrics, supporting decision-making for care management.

Financial Forecasting with Machine Learning

- Used SQL Server and PostgreSQL to aggregate financial data across multiple departments, ensuring the consistency and integrity of data used for forecasting.
- Implemented linear regression and decision tree models in Python to predict future financial trends and provide strategic insights.
- Developed Excel and Power BI reports that automated financial forecasting, improving the speed and accuracy of budgeting processes.

EDUCATION**Master of Science in Business Analytics**

May 2023 – September 2024

Sacred Heart University, CT, USA

Bachelor of Commerce

June 2019 – October 2022

Acharya Nagarjuna University, AP, India
