OVERVIEW

Detail-oriented Business Analyst with 5 years of experience in healthcare and insurance domains. Proven expertise in gathering and documenting business requirements, improving user experience, and supporting software development life cycles. Adept in Agile, Waterfall, and RUP methodologies with a strong foundation in claims processing and EDI transactions.

EDUCATION

Bachelor of Technology in Electronics & Communications

JNTU ANANTAPUR, India

CERTIFICATIONS

Professional Scrum Master (PSM), [scrum.org](https://www.scrum.org)

PROFESSIONAL SUMMARY

- Experienced in supporting business solutions and analyzing operations within the healthcare sector.
- Strong knowledge of iterative Software Development Life Cycle (SDLC) methodologies, including feasibility studies, requirements gathering, analysis, design, development, User Acceptance Testing (UAT), implementation, and post-implementation validation.
- Collaborated closely with QA teams and business users to develop and review test plans, test cases, and test scripts, ensuring alignment with business requirements.
- In-depth understanding of health insurance plans such as HMO, POS, and PPO.
- Successfully managed complex business initiatives, balancing functionality, efficiency, and quality requirements.
- Conducted manual and functional testing activities, including UAT, and tracked user-requested enhancements and changes.
- Skilled in creating Business Requirements Documents (BRD), Use Case Specifications, and System Requirement Specifications (SRS).

- Expertise in Agile Scrum methodologies, including writing user stories and managing the development process through user story acceptance.
- Experienced in both Agile and Waterfall methodologies; strong working knowledge of Jira.
- Adept at gathering client requirements through interviews, workshops, documentation review, and facilitating Joint Application Development (JAD) sessions.
- Recognized as an innovative team player with excellent data analysis and business writing skills.

TECHNICAL SKILLS

Business Management Tools:	MS Power Point, MS Excel, Canva
Languages:	SQL, Java, HTML
Methodologies:	Agile/Scrum, Waterfall, Rup
Operating Systems:	Windows 7/8/10/11, UNIX
Databases:	MS Access, MS SQL, Oracle 10g/11i/R12
Testing Tools:	JIRA, TOSCA
Business document Skills:	BRD, FSD, UML diagrams, RTM, Test plan, Test cases, Project Estimate and SRS

PROFESSIONAL EXPERIENCE

North America Med Tech Group Business Analyst

Atlanta, Georgia
Jun 2023 – Present

The project is to implement an automated claim adjudicating system for policy holders, general users and Health care professionals. Members, Health Care Providers are the primary actors, and Bank is the secondary actor in the project. The project had 3 releases which involved the implementation of Claim intake process, Adjudication and Reporting process.

Roles and Responsibilities:

- Analyzed and segregated business requirements into high-level and low-level Use Cases using Microsoft Visio.
- Created and developed Business Requirements Document (BRD) and Functional Requirements Document (FRD)
- Analyzed and managed cross-functional existing/planned business processes impacts.
- Developed feasibility and project risk analysis to ensure requirements can be met.
- Gathered High Level Business Requirements (HILBERs) from client and stakeholders through interview process.
- Defined Use Case descriptions including pre-conditions, assumptions, normal flows, alternative flows, post-conditions, notes and issues.

- Coordinated Virtual Meetings with business clients, stakeholders, end users and various development teams including testers to discuss project progression reports and to gather new requirements.
- Identified and created Use Case diagrams with business process workflow diagrams including Activity and Sequence from the requirements.
- Used detailed knowledge of application features, architectures and functions to assess scope and impact of business needs throughout analysis and through the completion of all enhancement specifications.
- Conducted Joint Application Design (JAD) sessions for communicating with all project sponsors and stakeholders.
- Communicated the project status to clients bi-weekly, highlighted changes made in requirements and gathered new requirements.
- Conducted User Acceptance Testing (UAT) with users and project team members.

Environment: Unified Modeling Language (UML), Microsoft Word, Microsoft Excel, Microsoft PowerPoint, Microsoft Project 2010, Canva, Adobe Reader and Agile scrum

Nov 2021 – May 2023**

The Group Health Administration System, a web-based platform, was developed to address the administrative needs of group health providers, including third-party administrators (TPAs) and self-insured organizations managing their own group health programs. This comprehensive software solution supports a wide range of insurance products, such as traditional indemnity plans, point-of-service (POS) plans, HMOs (including Medicare), Medicaid, PPOs, dental, vision, group life, disability, and prescription drug coverage.

Roles & Responsibilities:

- Conducted client interviews to gather and analyze requirements, translating business needs into detailed IT specifications. Developed and prioritized business and software requirements documentation.
- Collaborated with Subject Matter Experts (SMEs), capturing detailed process descriptions through in-depth questioning and documenting requirements for both business and technical audiences.
- Participated in meetings with development and QA teams to facilitate shared understanding of requirements, data collection, and data analysis.
- Authored software validation plans outlining objectives, scope, approach, resources, schedules, and the extent of validation activities.
- Assisted in the creation of wireframes to visually represent graphical user interface (GUI) designs.

- Reviewed development plans, quality assurance test plans, and user documentation to ensure alignment with original specifications.
- Performed Software Requirement Traceability Analysis to map software requirements to system requirements and risk analysis outcomes.
- Analyzed and documented business requirements and detailed designs, converting business needs into functional specifications.
- Maintained a specification change log, communicating updates and resolutions of open items with business, development, and QA/testing teams.
- Worked alongside Data Analysts to develop Data Flow Diagrams (DFDs), Entity Relationship (ER) Diagrams, and Use Case Diagrams.
- Led peer reviews and walkthroughs with insurance SMEs and key stakeholders.
- Managed client expectations through ongoing communication and involvement throughout the project lifecycle, educating stakeholders on project benefits and risks.

Environment: Unified modeling Language (UML), Microsoft Word, Microsoft Excel, Microsoft PowerPoint, Microsoft Project 2010, Canva, Adobe Reader, Agile Scrum.

North America Med Tech Group Quality Analyst

**Atlanta, Georgia
Jan 2020 – Sep 2021**

Manage My Patient (MMP) is a web-based Healthcare application designed for use in doctors' offices. The application comprises four primary modules: Patient, Admin, Doctor and insurance.

Roles & Responsibilities:

- Designed, developed, and executed comprehensive test plans, test scenarios, and test cases based on Business Requirements Documents (BRD).
- Validated and certified all four modules—Patient Management, Doctor, Admin, and Insurance Claims—to ensure functional and regulatory compliance.
- Ensured adherence to HIPAA regulations through thorough validation processes.
- Verified data integrity and connectivity between Admin web services and Insurance Claims web services.
- Authored and executed SQL queries, including joins, group by, and having clauses, to perform backend data validation.
- Logged and tracked defects using JIRA, ensuring timely resolution and documentation.
- Developed and executed test cases for Enterprise Web Services (EWS), XML, SOAP, and RESTful services utilizing SoapUI.
- Created and managed test data for Quality Assurance (QA) and User Acceptance Testing (UAT) throughout the test cycle. Performed smoke testing, regression testing, and user acceptance testing to validate system stability and functionality.
- Prepared daily and weekly status reports detailing test case execution, defect tracking, and requirements traceability matrix (RTM). Provided test execution metrics for each cycle to support project management and decision-making.
