SUMMARY

- Business Intelligence and Data Analyst with over 5+ years of experience driving data-driven decision-making and operational excellence in investment banking, core banking and compliance environments.
- Adept at designing, developing, and automating robust data pipelines using Python, SQL, and cloud-based ETL frameworks (Azure Data Factory), enabling faster and more accurate data processing.
- Proven expertise in building interactive, real-time dashboards using Tableau and Power BI that provide actionable insights to senior leadership, enhance risk monitoring, and improve SLA adherence.
- Collaborative team player experienced in working cross-functionally with stakeholders to optimize business processes, implement A/B testing strategies, and deliver measurable improvements in issue resolution and risk management.

EXPERIENCE

PNC | Data Analyst

Jan 2024 - Current

- Designed and deployed SQL-based automated exception monitoring scripts for 10+ SOX controls, reducing manual review time by 60% each month by streamlining data extraction and validation processes.
- Conducted Root Cause Analysis (RCA) on failed controls using Python (pandas, NumPy), identifying key failure patterns that helped refine policies and reduce repeat anomalies by 25% QoQ.
- Created interactive Tableau dashboards for 10+ KRIs/KPIs, delivering real-time risk visibility to Compliance and Risk teams and improving SLA adherence from 82% to 95%.
- Collaborated with cross-functional teams to run A/B tests on compliance communication strategies, resulting in a 12% uplift in issue resolution rates through data-driven optimizations.
- Developed Azure Data Factory pipelines for automated ETL workflows, ensuring compliance metrics were refreshed with under 15 minutes latency for timely reporting.
- Built a Power BI drill-down dashboard using DAX to monitor risk trends across Lines of Business, enabling early detection of risks by 1.5 months compared to previous processes.

Cognizant | Senior BI Analyst

Nov 2019 - Jul 2022

- Led end-to-end data pipeline development and automation using Python (pandas, SQLAlchemy) and integrated APIs for data extraction, transformation, and load processes on Teradata and cloud data warehouses, improving data processing speed by 40%.
- Developed complex SQL queries and stored procedures for quantifying portfolio risk metrics and generating daily automated reports that supported trading desk decisions and regulatory compliance.
- Designed and deployed interactive, real-time Tableau dashboards visualizing key performance indicators (KPIs), risk exposures, and P&L attribution for senior management, resulting in a 30% faster decision-making process.
- Implemented advanced Alteryx workflows to automate data cleansing, enrichment, and aggregation tasks, reducing manual data prep time by 50%, and enabling deeper quantitative analysis of market trends.

Infinite Infolab | Data Analyst

Sep 2018 - Oct 2019

- Supported the BI team by cleaning and prepping raw financial data in Excel (VLOOKUP, macros), ensuring data quality for reporting.
- Collaborated with stakeholders via Smartsheet and Jira to track deliverables and update project status, improving communication.
- Documented data workflows and processes in MS Visio to help and streamline reporting and ease onboarding for new Interns.
- Conceptualized to automate reconciliation reports, reducing manual effort by 35% and improving accuracy of financial data insights.

TECHNICAL SKILLS

Programming & Databases: Python, SQL, DAX, pandas, NumPy, SQLAlchemy, Scikit-learn, Dask, MySQL, PostgreSQL, Redshift, Teradata, NoSQL Databases, Data Structures, Algorithms, API Development, Scripting, Agile, SDLC

Data Engineering: ETL Pipelines, Data Warehousing, Data Modeling, Schema Design, Data Integration, Data Migration, Data Architecture, Database Optimization, Query Optimization, Performance Tuning, Data Lake Implementation, Real-time Data Processing

Data Analysis: Root Cause Analysis, A/B Testing, Statistical Analysis, Hypothesis Testing, Regression Analysis, Time Series Analysis, Data Mining, Clustering, Classification, Association Rule Mining, Anomaly Detection, Trend Analysis, Forecasting, Data Governance

Cloud Platforms: AWS, Azure, AWS SageMaker, EC2, Azure Data Factory, Azure Databricks, AWS Lambda, Azure Functions, Cloud Storage

CERTIFICATION: The Complete Data Structures and Algorithms Course in Python | Complete Python Bootcamp | Introduction to Machine Learning for Data Science | The Complete SQL Bootcamp 2022

EDUCATION

Binghamton University, Binghamton, New York
Master of Science in **Computer Science**

May - 2024
