

# HARI KRISHNA VANGAPALLY

Java Full Stack Developer

☎ +1 (231) 366-5294 ✉ [harivangapally@gmail.com](mailto:harivangapally@gmail.com) [in](#) [linkedin](#)

## Summary

---

- Experienced **Java Full Stack Developer** with over 4 years of expertise in building scalable, secure, and cloud-native enterprise applications.
- Strong hands-on experience in **Java**, **Spring Boot**, **Microservices**, and **REST API** development across finance, retail, and healthcare domains.
- Proficient in developing responsive UIs using **React.js**, **Angular**, **Bootstrap**, and integrating with backend APIs for seamless user experience.
- Deep expertise in **AWS cloud services** including EC2, Lambda, RDS, S3, ECS, CloudWatch, and IAM for building and managing distributed systems.
- Skilled in **Kafka**, **Redis Streams**, and event-driven architectures to support real-time data processing and service decoupling.
- Applied CI/CD best practices using **Jenkins**, **GitHub Actions**, **Docker**, **Terraform**, and **Kubernetes** for automated builds and deployments.
- Experienced in integrating authentication and security using **OAuth2**, **JWT**, and **Spring Security** for enterprise-grade applications.
- Strong understanding of **SQL/NoSQL databases** including PostgreSQL, MongoDB, Oracle, and Redis for data modeling and optimization.
- Familiar with big data and streaming tools such as **Spark**, **Flink**, **Presto**, **Hive**, and **ClickHouse**.
- Collaborative team player with experience in **Agile/Scrum**, cross-functional teams, and a passion for clean code, automation, and scalable design.

## Education

---

### Central Michigan University

*Masters in Information Technology*

*Michigan, USA*

## Certifications

---

- Oracle Certified: Java SE 11 Developer

## Experience

---

### Ford Motor Company

**Jan 2024 – Present**

*Java Full Stack Developer*

*Dearborn, Michigan, USA*

- Designed and developed scalable microservices using **Java 17**, **Spring Boot**, and **REST APIs** to support vehicle service history, diagnostics, and warranty tracking.
- Integrated **AWS services** such as **EC2**, **Lambda**, **S3**, **CloudWatch**, and **RDS** for cloud-native deployment of backend modules, improving system uptime and reliability.
- Developed user-facing modules using **React.js**, **TypeScript**, and **Bootstrap**, enabling dealers and users to access service records and telematics insights.
- Worked with **Kafka** and **Redis Streams** for asynchronous data flow between microservices in connected car systems, ensuring real-time status updates.
- Configured CI/CD pipelines using **Jenkins**, **Docker**, and **Terraform**, enabling smooth code deployments and infrastructure provisioning across dev and QA environments.
- Built dynamic dashboards using **Grafana** and **CloudWatch Logs** to monitor vehicle connectivity and API performance across multiple geographies.
- Designed and implemented **PostgreSQL** and **MongoDB** schema strategies for optimal storage and querying of vehicle metadata and telemetry events.

- Ensured secure access using **OAuth2.0** and **JWT**, aligning with Ford's enterprise-grade access control standards.
- Applied **Agile methodologies** and collaborated with cross-functional teams to deliver functional increments through bi-weekly sprints.
- Participated in code reviews, technical grooming, and mentoring sessions to maintain high code quality and alignment with industry standards.

## Flipkart

Jan 2022 – Jan 2023

*Java Developer*

*Bengaluru, India*

- Developed and optimized backend services using **Java 11**, **Spring Boot**, and **REST APIs** to handle high-traffic product catalog and order management systems.
- Implemented **Kafka-based** event-driven architecture to decouple services and enable real-time processing of inventory, payments, and user activity streams.
- Built distributed caching solutions with **Redis** and optimized SQL queries in **PostgreSQL** to reduce average response time by 30%.
- Utilized **Docker** and **Kubernetes** for containerization and orchestration of microservices across staging and production clusters.
- Integrated monitoring tools like **Grafana** and **Prometheus** to proactively identify bottlenecks and reduce system downtime.
- Secured APIs with **Spring Security** and **JWT**-based authentication, ensuring compliance with internal data access policies.
- Collaborated with frontend engineers to define and consume API contracts, ensuring smooth integration with Angular-based internal dashboards.
- Wrote **JUnit** and **Mockito** test cases, achieving 90% code coverage and reducing production issues post-deployment.
- Followed **Agile/Scrum** methodology, actively participating in sprint planning, retrospectives, and daily stand-ups.

## ICICI Lombard

Jan 2021 – Dec 2021

*Java Frontend Developer*

*Mumbai, India*

- Developed responsive and modular web interfaces using **Angular**, **JavaScript**, **HTML5**, and **Bootstrap** for policy management and claims processing portals.
- Integrated frontend modules with backend **RESTful APIs** developed in Spring Boot to enable real-time data rendering for customer and agent dashboards.
- Implemented form validations, conditional rendering, and data binding in Angular to enhance usability and reduce customer support queries by 25%.
- Worked closely with UX/UI teams to translate wireframes and prototypes into high-quality production code using **SCSS** and **Material UI**.
- Optimized frontend performance by implementing lazy loading, bundling strategies, and reducing DOM reflows, improving page load time by 40%.
- Used **Jenkins** for continuous integration and integrated automated frontend tests with **Selenium** and **Jasmine**.
- Collaborated with QA and backend teams during Agile sprints to troubleshoot issues and deliver incremental UI features on time.
- Ensured cross-browser compatibility and accessibility standards across Chrome, Firefox, and IE11 for regulatory compliance.

## Technical Skills

**Languages:** Java, Python, JavaScript, TypeScript, SQL, HTML/CSS, Bash, VBScript

**Frameworks/Technologies:** Spring Boot, Spring MVC, Hibernate, JPA, REST APIs, Microservices, Kafka, Spark, Flink, Hive, Redis Streams

**Frontend:** React.js, Angular, Bootstrap, jQuery, Material UI

**Cloud Platforms:** AWS (EC2, S3, Lambda, RDS, CloudWatch, ECS), Azure (App Services, Functions)

**DevOps & CI/CD:** Jenkins, Docker, Kubernetes, OpenShift, Terraform, Git, GitHub Actions, Jules

**Big Data & Streaming:** Hadoop, Hive, Flume, Apache Beam, Airflow, Presto, ClickHouse, Delta Lake, Hudi

**Databases:** PostgreSQL, MongoDB, Oracle, MySQL, Redis

**Automation & RPA:** Power Automate, Selenium, Control-M

**Monitoring & Logging:** Grafana, Splunk, CloudWatch, Prometheus

**Developer Tools:** VS Code, IntelliJ, Eclipse, Postman, Jira, Confluence

**Testing & Security:** JUnit, Mockito, Selenium, OAuth2, JWT, Spring Security
