SUMMARY

Business Data Analyst with **4+ years of experience** in finance, healthcare, and retail, specializing in SQL, Python, Tableau, Power BI, and cloud platforms (AWS, Azure, Snowflake). Expertise in building executive dashboards, designing ETL workflows, and automating reporting pipelines. Proven success improving forecasting accuracy by 18%, reducing manual reporting 40%, and achieving \$250K annual savings through vendor analysis. Strong background in regulatory compliance (HIPAA, GDPR, CCPA), stakeholder management, and delivering actionable insights that support enterprise decision-making.

TECHNICAL SKILLS

Core Analytical Skills: Data Analysis & Insight Generation, Business Requirements Gathering, KPI Development, Process Improvement, Root Cause & Trend Analysis

Data Visualization & BI: Power BI, Tableau, Excel (Advanced), Google Data Studio, Looker

Databases & SQL: SQL, MySQL, PostgreSQL, Oracle, Snowflake

Programming & Analytics: Python (Pandas, NumPy, Matplotlib, Seaborn), R (basic analytics)

ETL & Data Integration: Alteryx, Talend, Informatica, Apache Airflow

Cloud & Big Data: AWS (Redshift, S3, Glue, QuickSight), Azure (Synapse, Data Factory), Google BigQuery

Business & Domain Knowledge: Business Process Mapping, Financial & Operational Analysis, Risk & Compliance Reporting, Domain: Supply Chain / Healthcare / Finance / Retail

Soft Skills: Business Communication, Storytelling with Data, Stakeholder Management, Agile & Scrum, Problem-Solving & Decision Support

Emerging Skills: Generative AI for Business Insights, ML Basics (Forecasting, Classification), Automation with RPA (UiPath, Power Automate), Data Governance & Privacy (GDPR, HIPAA, CCPA)

PROFESSIONAL EXPERIENCE

Capital One Financial, NY, USA

Jan 2025 - Current

Business Data Analyst

- Built Tableau and Power BI dashboards tracking revenue and credit risk KPIs, reducing manual reporting 35% and enabling executives to make faster, data-driven strategic and compliance decisions.
- Automated recurring compliance reporting pipelines with Python and SQL, reducing turnaround time 40%, ensuring accuracy across monthly submissions, and eliminating human error from regulatory processes completely.
- Engineered Snowflake pipelines using AWS Redshift, S3, and Glue, enabling secure financial data integration, enforcing quality governance, and ensuring compliance with HIPAA, GDPR, and CCPA across sensitive datasets.
- Partnered with compliance, risk, and product stakeholders in Agile sprints, translating requirements into scalable models, reducing delivery delays 20%, and accelerating enterprise-wide analytics adoption significantly.
- Conducted deep-dive variance analysis on credit portfolio performance using SQL and Python, uncovering risk patterns that improved predictive forecasting accuracy by 18% across consumer lending products.
- Implemented automated reconciliation checks using Python, reducing error-prone manual validations by 70%, strengthening audit readiness, and ensuring consistent financial reporting accuracy across enterprise systems.
- Designed executive-level KPI scorecards integrating Snowflake and Tableau, enhancing transparency for board reporting, aligning with regulatory expectations, and improving stakeholder satisfaction ratings by 22%.

Mphasis, India

May 2021 - Aug 2023

Business Data Analyst

- Designed ETL workflows with Alteryx and Airflow, integrating CRM, supply chain, and finance data into Azure Synapse, increasing reporting efficiency 30% and enabling timely business decision-making.
- Developed Power BI and Google Data Studio dashboards monitoring churn, revenue, and SLA performance, providing executives with near real-time insights that improved strategic responsiveness 25%.
- Conducted root cause analysis on vendor operations, identified inefficiencies, and implemented improvements reducing annual procurement costs \$250K while strengthening vendor management frameworks and compliance.
- Automated reconciliation tasks with UiPath and Power Automate, reducing manual workload 60%, eliminating recurring inconsistencies, and improving overall finance team productivity 25%.
- Designed SQL-driven KPI reports for healthcare clients, enabling accurate SLA monitoring, regulatory compliance, and performance tracking across critical patient and operational metrics.
- Collaborated with business stakeholders to document workflows and develop KPI frameworks, aligning reporting outputs with strategic objectives and enhancing cross-departmental decision-making alignment.

CitiusTech, India

Mar 2020 - Apr 2021

Data Analyst

- Built SQL dashboards consolidating financial and operational KPIs, enabling leadership to monitor business trends, identify performance gaps effectively, and implement timely corrective actions across functional departments.

- Analyzed sales and supply chain datasets using Python, Pandas, and Seaborn, uncovering patterns that improved forecasting accuracy 15% and enhanced demand planning reliability across multiple product categories.
- Migrated legacy datasets into Google BigQuery, validating completeness, ensuring accuracy, and delivering uninterrupted reporting processes with zero downtime across enterprise-critical business intelligence platforms.
- Implemented automated governance standards and data quality checks, reducing reporting errors 20%, improving trust in analytics, and ensuring reliable decision-making across multiple financial and operational domains.
- Developed Power BI dashboards monitoring project progress and cost metrics, providing real-time transparency, enabling leadership to track performance effectively, and ensuring projects remained aligned with budgets and deadlines.

EDUCATION

Masters in Business Data Analytics	May 2025
ST. Francis College, NY, USA	
B.COM (Honors)	May 2021
Indian Institute of Management and Commerce, India	

PROJECT

Customer Segmentation for Targeted Marketing Campaigns Brooklyn, NY

- Analyzed CRM, social media, and website interaction data using SQL, R, and Python to segment customers by demographics, purchasing behavior, and engagement, enabling improved personalization and targeted marketing strategies.
- Applied clustering techniques, including k-means, to build predictive models identifying high-value customer segments, improving segmentation accuracy, optimizing targeted campaigns, and enabling effective data-driven marketing decisions that enhanced customer reach.
- Designed and delivered interactive Tableau dashboards showcasing customer profiles, campaign insights, and performance metrics, empowering marketing teams with actionable intelligence to enhance decision-making and align segmentation with business objectives.
- Enhanced campaign ROI by 20% by leveraging advanced statistical modeling, customer segmentation, and personalized offers, aligning marketing initiatives with organizational goals to maximize targeted messaging and boost customer conversion.
