

HARIKA MANGU Boston, MA manguharika16@gmail.com +1 (508)-452-9444 GitHub LinkedIn Portfolio	
TECHNICAL SKILLS Programming: Python, R, SQL Databases: MySQL, PostgreSQL, Snowflake Visualization: Tableau, Power BI, Looker, Excel (PivotTables, VLOOKUP) Data Engineering: ETL, Airflow, DBT, Docker, Spark, Databricks, AWS, GCP, Azure Machine learning: Regression, Classification, Predictive Analytics, Statistical Analysis, A/B Testing, NLP Other: RESTAPI's, Jira, Git, GitHub Actions, Agentic AI, prompt engineering	
WORK EXPERIENCE AI Developer, Lowtouch.ai, Boston, MA Mar 2025 – Present - Designed scalable no-code Agentic AI workflows using Langchain's ReAct framework and architected LLM-driven workflows leveraging OpenAI's GPT-4o improving data pipeline performance by 40%. - Developed automated financial data ingestion agents using OpenAI API's, LLaMA models reducing manual entry by 60%. - Built AI-based invoice automation tool integrating Odoo API's handling 500+ transactions/week, increasing accuracy by 30%. - Orchestrated data delivery pipelines using Apache Airflow, cutting manual email operations by ~70%. - Partnered with product teams to build POC's and prototypes for customer-facing analytics features. Data Engineer, VINMAR Solutions, New jersey Nov 2024 – Mar 2025 - Built ETL pipelines in Python and Airflow to process structured/unstructured sales data reducing pipeline time from 2hrs to 20 mins. - Optimized complex SQL queries using CTE's, joins and window functions on Snowflake, improving query performance by 50%. - Developed Tableau dashboards for sales KPIs, product performance, and executive reporting. - Collaborated with cross-functional marketing and sales stakeholders to define and deliver business intelligence solutions. Data Analyst &Teaching Assistant, Northeastern University Boston, MA Jan 2023 – May 2023 - Mentored 100+ students on SQL, Python, Tableau, and Power BI for data visualization and dashboard design. - Led lab sessions on automating reporting processes, building KPI dashboards, and transforming raw datasets. - Provided hands-on support for student projects involving real-world datasets and business case analysis. Data Scientist, Triad Software, Hyderabad, India Sep 2021 – May 2022 - Analyzed raw cybersecurity data through Exploratory data analysis (EDA) and statistical techniques, identifying key patterns and trends that informed decisions and improved data quality by 20%. - Queried over 100k records using advanced SQL to extract, transform data, reducing data processing time by 25%. - Created interactive dashboards and KPI's utilizing Tableau, providing actionable insights to derive business decisions improving stakeholder reporting efficiency by 30%. - Developed a machine learning predictive model using Keras, TensorFlow and SVM, SOM algorithms for anomaly detection achieving 95% accuracy.	
RESEARCH Research Assistant, Northeastern University, Boston, MA Aug 2024 – Nov 2024 (Research on Text Summarization ML & NLP) - Preprocessed 100,000 PubMed healthcare articles using NLP (tokenization, lemmatization) with TensorFlow. - Fine-tuned BERT and T5 encoder-decoder models to reduce training time by 25% and enhance summarization accuracy. - Deployed healthcare summarization solution on AWS (EC2, S3, API) to enable real-time access to insights.	
ACADEMIC PROJECTS Black Friday Analysis (A/B Testing, Python, Data analysis) - Link - Performed EDA on heart disease datasets using Python identifying key variable correlations, outliers that influenced diagnosis - Cleaned and transformed 300+ records and Uncovered patterns laying strong 85% insight coverage of key attributes. Breast Cancer Prediction (Python, Data Analysis, Data mining, Classification, principal component analysis) - Link - Analyzed by performing EDA and implemented Machine Learning models for early detection and prevention of breast cancer, resulting in 97% Recall. - Evaluated the performance of logistic regression model on a breast cancer dataset, achieving a high accuracy of 98.2%, precision score of 0.977, and ROC AUC score of 0.977, indicating the model is an effective classifier. - Performed hyper parameter tuning to optimize the performance of logistic regression for better prediction and recall. Telecom Churn Analytics (Power BI, Reporting) - Link - Developed three KPIs in Power BI to monitor call center trends, agent performance, diversity Inclusion and customer metrics in the telecom industry, effectively identifying a 20% decline in telecom business. - Evaluated churn rate using DAX measures, discovering 26% churned customers due to higher subscription rates. Centralized Vaccine Database and Healthcare Analytics (MySQL, Python, Tableau) - Engineered an E-R model to represent relationships between key entities, achieving a 25% reduction in data redundancy. - Designed a centralized vaccine database, integrated with Tableau, to provide actionable insights through real-time visualizations.	
EDUCATION Northeastern University GPA 3.79/4.00 Sep 2022 – May 2024 Master of Science in Data Analytics Engineering Boston, MA Relevant Courses: database systems (SQL), Business Intelligence, Data Mining, Data Visualization, NLP, Machine Learning Academic Positions: Research Assistant (NLP), Graduate Teaching Assistant (IE6600), Graduate Student Office Assistant
