

Hari Raj Banchode

Data Analyst

Ohio, USA | (908) 691-2436 | hariraj.9905@gmail.com

SUMMARY

- I am a **Data Analyst** with **4 years** of experience in finance and healthcare sectors, Proficient in analyzing complex datasets using **SQL, Python (Pandas, NumPy, Scikit-Learn), R, and SAS**. Experienced in creating dashboards and visualizations with **Tableau, Power BI, and QlikView** to deliver actionable insights.
- I am skilled in applying statistical methods and predictive modeling using tools like **Python (stats models, TensorFlow, scikit-learn), R, and PySpark** to identify trends and patterns.
- Experienced in implementing ETL processes with **Talend, Informatica, and Apache Spark**. I am proficient in data warehousing and querying databases using **MySQL, PostgreSQL, MongoDB, and Oracle**.
- Knowledgeable in cloud platforms such as **AWS (SageMaker, EMR, Redshift, and KMS)** for data processing and security. Experienced in processing automation using **UiPath** and scripting languages.
- Adept at collaborating with cross-functional teams using **JIRA, Confluence, and Agile methodologies**. Ensures data compliance with **healthcare regulations (HIPAA)** and maintains version control with **Git**.

SKILLS

- Data Management and Databases:** SQL NoSQL (MongoDB, Cassandra), ETL Processes
- Programming Languages:** Python (Pandas, NumPy, Matplotlib, Seaborn), R, SAS
- Data Visualization:** Tableau, Power BI, Excel (Advanced, VBA)
- Data Warehousing** Amazon Redshift, Snowflake, Google BigQuery
- Statistical Analysis & Machine Learning:** Statistical Software (SAS, SPSS), Machine Learning (TensorFlow, Scikit-learn), Data Mining
- Cloud Platforms:** AWS, Azure
- Data Processing and ETL Tools:** ETL Tools (Talend, Informatica, SSIS), Apache Airflow
- Version Control:** Git/GitHub
- Other Skills:** Data Quality Tools (Alation, Talend), Data Warehousing Data Governance, Data Security Practices (Encryption, Masking), Data Privacy Laws (GDPR, HIPAA), Epic, Cerner, Healthcare Data Standards (ICD-10, CPT, HL7), Crystal Reports, SSRS (SQL Server Reporting Services), Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, Process Mapping, Solution Oriented, Ad Hoc Analysis, Project Management, Data Presentation, Requirement Gathering, Root Cause Analysis, Data Storytelling, Communication Skills, Critical Thinking, JIRA, Problem-Solving

EDUCATION

Master of Science in Business Analytics – Kent State University, Ohio, USA

Bachelor of Science in (Maths, Statistics and Computer Science) - Osmania University, Hyderabad, India

WORK EXPERIENCE

Data Analyst | Ohio Health, OH

Jan 2024 – Present

- Architected and maintained ETL pipelines using SQL Server Integration Services (SSIS) and Apache NiFi to automate the ingestion, transformation, and loading of healthcare data from multiple sources, increasing data processing capacity by 40%.
- Created and maintained real-time, interactive PowerBI dashboards for tracking hospital performance metrics such as patient throughput, bed occupancy rates, and emergency room waiting times, reducing manual reporting time by 40%.
- Conducted advanced statistical analysis using Python (pandas, NumPy) to identify key trends inpatient admissions, discharge times, and length of stay, resulting in the identification of bottlenecks that led to a 10% improvement in patient throughput.
- Utilized Amazon Redshift to create a scalable data warehouse, centralizing over 2 million patient records for real-time reporting and analytics. Optimized query performance by 35% through partitioning and indexing strategies.

- Collaborated with data scientists to prepare and pipeline data for predictive analytics models, such as patient readmission forecasts. Optimized feature engineering processes, reducing model training time by 20%.
- Performed extensive query optimization on SQL Server and PostgreSQL databases, reducing average query runtime from 20 seconds to 5 seconds, which significantly improved the speed of analytics reports for healthcare providers.
- Designed performance tracking systems that monitored key performance indicators (KPIs) such as patient satisfaction rates and care team efficiency, resulting in a 20% improvement in patient satisfaction scores over a 6-month period.
- Implemented data encryption and access control mechanisms in line with HIPAA regulations, ensuring secure storage and transmission of sensitive healthcare information. Achieved 100% compliance during annual security audits.
- Developed and automated data quality monitoring frameworks using Talend Data Quality and Python, identifying and resolving data inconsistencies across patient records and improving data accuracy by 25%.
- Integrated PowerBI for exploratory data analysis (EDA) and created detailed visualizations of patient demographics, admission patterns, and treatment outcomes, providing actionable insights for improving operational efficiency and patient care strategies.

Data Analyst | Adon's Softech, India

Aug 2019 – Dec 2022

- Led a comprehensive data analytics project aimed at improving customer satisfaction metrics for a retail client, analyzing over 2 million customer interactions to identify key drivers of satisfaction.
- Utilized SQL to extract data from multiple relational databases, cleaning and preprocessing datasets, which reduced data inconsistencies by 30% and ensured high-quality input for analysis.
- Conducted EDA using Python libraries such as Pandas and Matplotlib, identifying trends and patterns that informed actionable insights, leading to a 15% increase in customer retention rates.
- Integrated data from multiple sources such as CRM systems, e-commerce platforms, and social media channels using Python and SQL, ensuring seamless data flow across systems and reducing data silos by 25%.
- Developed and implemented regression models using Scikit-learn to quantify the impact of various factors on customer satisfaction, achieving an accuracy rate of over 85% in predicting customer feedback scores.
- Created interactive dashboards using Tableau, enabling stakeholders to visualize key performance indicators (KPIs) in real time, which improved reporting efficiency by 40%.
- Designed and executed A/B tests to evaluate the effectiveness of new customer engagement strategies, resulting in a 25% improvement in conversion rates for promotional campaigns.
- Applied clustering algorithms to segment customers based on behavior and preferences, allowing for personalized marketing efforts, and driving a 30% increase in targeted campaign responses.
- Collaborated with cross-functional teams to develop predictive models to forecast customer churn using Python's Scikit-learn, enabling the client to implement proactive retention strategies that reduced churn rates by 20%.
- Automated the data pipeline for customer interaction analysis using Python and Airflow, reducing manual effort by 50% and ensuring timely delivery of insights for decision-making.
- Performed sentiment analysis on customer feedback from social media and review platforms using Natural Language Processing (NLP) techniques, uncovering critical areas for service improvement that contributed to a 10% boost in customer satisfaction scores.
