## SUMMARY

Experienced Data Engineer transitioning to Data Analyst, skilled in building real-time data pipelines and ETL processes. At Techlogic Solutions, developed data transformation pipelines using AWS and Apache Kafka, enhancing data-driven insights. Proficient in Python and SQL, with a strong foundation in machine learning and big data analytics. Eager to leverage technical expertise to deliver actionable insights and support data-driven decision-making.

## WORK EXPERIENCE

### Techlogic Solutions

Jul 2023 - Present

Software Developer, Data

Charlotte, NC

- Integrated Real-time Data Streams from Pharmacy Systems using Debezium for Change Data Capture (CDC), seamlessly ingesting medication dispensing events into Apache Kafka for immediate processing.
- Designed and Implemented Data Transformation Pipelines in AWS Lambda, focusing on data cleaning, enrichment, and aggregation. Utilized AWS tools and services to enhance raw data, joining with medication master lists and creating structured datasets optimized for analytics.
- Structured and loaded processed data into AWS Redshift by designing a star schema with dimensions like Patients, Medications, and Pharmacists, and a central fact table capturing dispensing events, which facilitated data-driven insights for trend analysis, drug interaction predictions, and inventory forecasting using ML models

### EarthWorks

Jun 2020 - Dec 2021

Data Engineer

Bengaluru, India

- Engineered and implemented complex ETL pipelines for a project that digitized construction operations, improving data accessibility and operational efficiency
- Utilized Python and MongoDB's API to extract diverse data from various interconnected modules: Construction Engineer App, Inventory App, and Procurement App.
- Executed intricate data transformation procedures for BigQuery compatibility, including comprehensive data cleaning, schema alignment, and complex business logic encapsulation.
- Successfully loaded transformed data into BigQuery using batch operations, optimizing performance with scheduling during off-peak hours.
- Validated loaded data against original MongoDB records to ensure data integrity, running meticulous data completeness and accuracy checks.
- Optimized resource allocation and inventory management using Snowflake and MySQL, boosting real-time operational planning.

### EarthWorks

Jun 2020 - Jun 2020

Data Engineer

Bengaluru, India

- Used Apache Spark for large-scale data preprocessing of tweets and applied Spark MLlib for feature extraction and sentiment classification using Naive Bayes, improving the accuracy of sentiment analysis

### Bash Scripting

Mar 2019 - May 2019

Data Engineer

- Developed a robust data model for a high-traffic video dictionary app, capturing user interactions and implementing denormalization for improved query performance.

## EDUCATION

### University Of North Carolina At Charlotte

MS, Computer Science, Data Science

- **GPA:** 3.6
- **Coursework:** Big data analytics for computational advantage, Information Visualization, Computer Vision, knowledge Disc in databases, computer communication and network, Algorithm and data Structures, Database Systems, Software System Design and Implementation, Illustrative visualization, Intelligent Systems

## SKILLS & INTERESTS

- **Operating Systems:** Linux (Ubuntu), Windows & Mac, Android, iOS
- **Programming Languages:** C, C++, Java, Python 3.6/3.8, Scala, Bash Scripting
- **Database Query Language:** SQL, MySQL
- **Web Development:** HTML, CSS, JavaScript
- **Data preprocessing | Cloud:** Pandas, NumPy, Snowflake, AWS
- **Machine Learning:** Machine Learning algorithms, Python (Scikit-learn), Classification, Regression, Data Analysis
- **Testing and Development Tools:** Pytest, PyCharm, GitHub, JUnit, Mockito
- **Agile tools and Methodologies:** Jira, Agile, Scrum, Sprint Planning
