FULL-STACK DEVELOPER

Professional Summary:

Full Stack Developer with 5+ years of experience in building web applications using **Java (Spring Boot, Spring MVC, Hibernate, JPA)** and **React.js/Next.js**. Skilled in designing **RESTful and GraphQL APIs**, implementing **microservices**, and optimizing performance using **Redis, Kafka, and asynchronous processing**. Strong experience deploying cloud-native applications on **AWS (EC2, RDS, S3, Lambda)** and automating workflows with **CI/CD (Jenkins, Docker)**. Proficient in frontend development with **React, TypeScript, Tailwind CSS**, and state management using **Redux Toolkit**. Experienced in testing with **JUnit, Mockito, Jest**, and using tools like **Swagger, Postman, ELK Stack, Prometheus/Grafana**. Adept in **Agile/Scrum**, version control with **Git/GitHub**.

Technical Skills:

- **Languages:** Java, TypeScript, JavaScript(ES6+), SQL.
- **Frontend Technologies:** React.js, Next.js, HTML5, CSS3, Tailwind CSS, Axios, Apollo Client.
- **Backend Technologies:** Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Spring Data JPA, Spring Cloud Config.
- **State Management:** React Hooks, Context API, Redux Toolkit.
- **API Technologies:** RESTful APIs, GraphQL, Postman, Swagger.
- **Authentication & Security:** Spring Security, OAuth 2.0, JWT, HTTPS, Role-Based Access Control (RBAC).
- **Messaging & Streaming:** Apache Kafka.
- **Databases:** PostgreSQL, MySQL, Oracle, MongoDB.
- **Cloud & DevOps:** AWS (EC2, S3, RDS, Lambda, CloudWatch, CloudTrail, IAM), Docker, Terraform, CloudFormation.
- **Monitoring & Logging:** ELK Stack, Prometheus, Grafana, Spring Boot Actuator.
- **CI/CD & Version Control:** Jenkins, Git, GitHub, Maven, Gradle.
- **Testing Tools:** JUnit, Mockito, Jest, React Testing Library, Postman Collections.
- **Agile Tools:** Jira, Agile/Scrum methodologies.

Professional Summary:

Sunrise Bank, Plano, TX.

Jan 2024 – June 2025

Role: Software Developer

- Developed RESTful APIs using **Java, Spring Boot, Spring MVC**, and **Spring Data JPA**, achieving a 25% reduction in response times and improved backend efficiency.
- Designed and implemented scalable microservices with **Spring Boot** and **Hibernate**, using a layered architecture for modular development and integration with a **React.js** frontend.
- Built a Fraud Detection Dashboard using **React.js, HTML5**, and **CSS3**, improving **UI/UX** and reducing task completion time by 30%.
- Built reusable **React components, modular CSS**, and implemented **lazy loading** and **code-splitting**, improving initial load performance and maintainability.
- Built application using **React.js** and **Next.js**, leveraging **SSG/SSR**, dynamic routing, and API routes for performance and scalability.
- Used **Spring Data JPA** with **MySQL** and **Spring Data MongoDB** to manage relational and NoSQL data models.
- Deployed **Spring Boot microservices** on **AWS EC2, RDS, and S3**, setting up **auto-scaling, load balancing**, and IAM for secure deployments.
- Integrated **RESTful and GraphQL APIs** using **Axios** and **Apollo Client**, reducing payload size.
- Built RESTful APIs and microservices using **Express.js**, enabling request routing and middleware integration.
- Implemented data processing and validation logic using **Pandas, NumPy**, and **custom Python scripts** for ETL pipelines.
- Increased test coverage from 40% to 90% by writing unit and integration tests using **JUnit, Mockito**, and **React Testing Library** (frontend), ensuring code reliability.
- Used **Bitbucket** for version control and repository management, maintaining codebase integrity through feature branches.
- Secured APIs using **Spring Security** with **JWT** and **OAuth 2.0**, implementing **role-based access control (RBAC)**.
- Documented and tested APIs using **Swagger** and **Postman**, streamlining developer onboarding and QA testing.
- Containerized services with **Docker**, standardizing environments across dev, test, and production stages.
- Deployed containerized applications using **Kubernetes** for automated scaling and orchestration.
- Built and automated **CI/CD pipelines** using **Jenkins**, reducing deployment time by 40% and improving delivery consistency.
- Used **Maven** and **Gradle** for dependency management, modular builds, and configuration of Spring Boot services. Maintained code quality using SonarQube.
- Integrated **Prometheus** and **Grafana** with Spring Boot Actuator for monitoring and performance metrics visualization.
- Followed **Agile Scrum** methodologies using **Jira** for sprint planning and tracking, and **Git** for version control and collaborative development.
- Centralized logging using **ELK Stack (Elasticsearch, Logstash, Kibana)** to monitor application behavior.
- Managed cron jobs and health checks through custom shell utilities, ensuring application uptime and performance.

CareSource, Dayton, OH.

Aug 2023 – Dec 2023

Role: Full Stack Developer

- Developed and maintained **backend services** using **Java 17** and **Spring Boot**, implementing **RESTful APIs**, authentication mechanisms, and optimizing database queries to reduce response time by 40%.
- Enabled **asynchronous processing** in Spring Boot to support non-blocking service workflows.
- Developed backend logic with **Express.js**, integrating with databases to handle dynamic data operations.
- Developed backend services and automation scripts using **Python**, optimizing data transformation and business workflows.
- Created **data models** and **repositories** using **Spring Data JPA**, using JPQL and Criteria API for efficient PostgreSQL interactions.
- Built **reusable UI components** using **React (TypeScript)** and **Tailwind CSS**, improving UI consistency and modularity for a career exploration platform.
- Created and maintained **Bitbucket Pipelines** to automate testing, linting, and deployment.
- Managed stateful client-side logic using **React Hooks** and **Redux Toolkit**, optimizing data flow and component performance.
- Implemented **Redis caching** with Spring Cache abstraction and RedisTemplate to reduce latency and backend load.
- Integrated **Apache Kafka** for **event-driven architecture**, developing producers/consumers for async messaging across services.
- Built **CI/CD pipelines** using **Jenkins**, automating test, build, and deployment workflows to improve delivery efficiency.
- Developed serverless functions using **AWS Lambda** and integrated with **API Gateway** to handle asynchronous workflow.
- Wrote **unit and integration tests** using **Jest**, **JUnit**, and **Mockito**, increasing code quality and service reliability.
- Streamlined API collaboration and testing using **Swagger** specifications and **Postman** collections.
- Monitored system logs with **Kibana**, visualizing metrics via **ELK Stack** for production diagnostics.
- Implemented granular access control with Spring Security RBAC, integrating token-based authentication via JWT and OAuth2.
- Used **Git** and **GitHub** for version control, and collaborated in **Agile Scrum teams** using **Jira** for sprint planning, issue tracking, and pull requests.
- Optimized **SQL** queries and utilized caching strategies to enhance application responsiveness and system throughput further.

Optirise, Hyderabad

Sep 2019 – Aug 2022

Role: Full Stack Developer

- Developed **RESTful APIs** using **Spring Boot** to manage backend operations, integrating with **MongoDB** via **Spring Data** for data storage and efficient querying.
- Implemented data validation using **Hibernate** Validator annotations & centralized error handling.
- Built cross-browser compatible UIs using **React**, **HTML5**, **CSS3**, and **JavaScript**, improving user experience and accessibility.
- Built reusable **React components**, feature modules, and UI elements with **code-splitting** and **lazy loading**, improving performance and reducing initial load time by 60%.
- Wrote **unit and integration tests** using **Jest** (React) and **JUnit** (Java backend), achieving **85%+ code coverage** and ensuring high test reliability.
- Integrated RESTful and **GraphQL APIs** into the application, handling data fetching and mutation using **axios** and **Apollo Client**.
- Implemented **event-driven microservices** architecture with **Apache Kafka**, enabling asynchronous communication and real-time data processing across services.
- Automated **CI/CD pipelines** using **Jenkins**, reducing deployment time and improving code efficiency across environments.
- Implemented **Docker**-based containerization for **Spring Boot** services, enabling isolated builds and seamless integration into **CI/CD pipelines**.
- Monitored and optimized AWS resources using **CloudWatch** and **CloudTrail**, enabling performance tracking and improved system observability.
- Secured APIs using **Spring Security** with **JWT**, enforced **HTTPS**, and applied **input sanitization** to mitigate security threats.
- Used **Git** and **GitHub** for version control, implementing branching strategies and managing code reviews through pull requests.

EDUCATION

Master of Science in Computer Science, University of Central Missouri, USA, 2023.
