Summary

As a data analyst with four years of experience, excel in transforming complex datasets into actionable insights. proficiency in SQL, Python, and Tableau allows me to create impactful visualizations and reports that drive strategic decisions that are committed to improving operational efficiency and enhancing customer satisfaction through data-driven recommendations.

Skills

Data Analysis	Data Manipulation, SQL Queries,SQL coding, Python Programming, Data Processing, Data Warehousing, Lean Six Sigma Concepts, Big Data Analytics
Data Integration	SQL Server Integration Services (SSIS), Informatica
Big Data Technologies	Apache Hive, Hadoop, Spark, HDFS
Data Visualization	Tableau, Power BI – DAX, Power Query
Microsoft Access:	Database Design, Query Development, Data Modeling, Relationship Management, Macro Automation
Microsoft Excel	Data Analysis, Pivot Tables, VLOOKUP, Power Query, Data Validation, Macros (VBA), Charts , & Graphs, Statistical Analysis
Programming Language	VBA
Predictive Analytics	Python, knime
Data Manipulation And Recommendations	Alteryx, SQL, Statistical Analysis System (SAS) – A/B Testing, SPSS
Data Management	Data Governance, Data Discovery, Data Integrity, Data Representation
Reporting and KPIs	KPI Monitoring, Return on Investment, QA Processes: Root Cause Analysis, Data Integrity Checks
Salesforce CRM	Report Generation, Dashboard Creation, Workflow Automation, Report Generation, Workflow Automation, Dashboard Creation
Business & Operational Skills	Business Requirements, Business Cases, Business Strategy, Root Cause Analysis, Regulatory Policies, Drafting Business Issues and Customer Requirements
Project Management	Project Implementation, Monitoring Projects, Cross-Functional Collaboration, Time Management, Adaptability to Change, Planning and Problem-Solving
Soft Skills	Planning and Problem-Solving, Compare Outcomes, Schedule Management, Writing Clear Reports, Organized Goal Setting, Detail-Oriented Observation, Operational excellence,Vision
Communication & Teamwork	Collaboration with team members, Customer Interaction, Responsible for effective communication, Detail Orientation, Organizational Skills, Decision Making, Troubleshoot,

Education

Masters in Management Information Systems
Auburn University at Montgomery, Montgomery, AL

May 2023

Bachelor Of Engineering In Computer Science
Sri Chandrasekharendra Saraswathi Viswa Mahavidyalaya

April 2021

Projects

Detection Of Fake Online Reviews Using Semi-supervised and Supervised Learning
Python, Machine Learning, Data Analysis

[Live Link](#)

- Published in the **International Research Journal of Engineering and Technology (IRJET)**, showcasing advanced semi-supervised and supervised learning techniques for detecting fake online reviews.

Work Experience

Fiserv (Remote)

DATA ANALYST

February 2024 - Present

- Analysis of large-scale datasets using SQL, Python program, and PySpark, identifying key trends and patterns that
- led to a 15% increase in operational efficiency across multiple departments.
- Utilized feedback and insights, tracked trends, and identified customer service improvement opportunities, leading to actionable recommendations for enhancing customer experience.
- Applied machine learning models in Python to predict customer churn, achieving an 80% accuracy rate, contributing to retention strategies that reduced churn by 12%.
- Automated data extraction and reporting processes, reducing manual efforts by 40%, and ensuring timely and accurate delivery of business intelligence.
- Proficiently used Excel for data manipulation, SQL for querying relational databases, and Python libraries like Pandas and NumPy for data wrangling and analysis.
- Successfully migrated company data processes to cloud-based platforms, reducing infrastructure costs.
- Automated manual reporting processes using tools like Python, SQL, and Tableau, reducing reporting time by 30% and improving operational efficiency.

Thompson Reuters -Winterpark, Florida

DATA ANALYST

July 2023 - February 2024

- Meet with stakeholders to understand business needs and data gathering requirements.
- Utilized SQL to query and extract data from relational databases, ensuring accurate and efficient reporting of key business metrics related to automated Power BI dashboards to track operational metrics, providing department leaders.
- Applied Excel and Tableau Prep for data cleansing, preprocessing, and transformation, improving data quality and readiness for analysis.
- Develop interactive dashboards and visual reports in Power BI and Tableau.
- Designed and maintained interactive dashboards in Power BI to track key Metrics.
- Built predictive models using Python and KNIME to forecast sales trends.
- Conducted statistical analysis and trend forecasting using SQL and Excel formulas to identify business opportunities and risks.
- Analyze data to identify trends, patterns, and insights that inform administrative decisions.
- Suggest changes in policies, procedures, or software/tools to drive process improvement.
- Validated large datasets against source systems using SQL, ensuring consistency in reporting metrics.
- Collaborated with marketing and sales teams to design and implement a new customer segmentation model, using data analysis to tailor marketing efforts, which resulted in a 15% increase in conversion rates.
- By integrating data-driven approaches, OPEX helped to streamline operations, reduce costs, and enhance overall performance.
- Automated data workflows using Python and Alteryx, reducing data preparation time by 30%.

Works bot

DATA ANALYST INTERN

January 2020 - March 2021

- Designed and maintained data pipelines using an environment like SQL and Python for efficient data extraction, transformation, and loading (ETL) from different sources into a centralized data warehouse. Conducted exploratory data analysis using Python and SQL to support business initiatives and identify key trends.
- Built interactive dashboards using Tableau to visualize company performance, leading to more effective decision-making processes.
- Performed root cause analysis using SQL and Python to identify graphs, trends and resolve data quality issues.
- Analyzed marketing campaigns to calculate ROI and provide recommendations for budget allocation.
- Collaborated with stakeholders to draft business cases and define requirements for data-driven projects, aligning solutions with strategic goals.
- Assisted in automating data pipelines for monthly reporting, reducing data preparation time by 40%.
- Worked collaboratively with cross-functional teams to integrate data from multiple sources, ensuring consistency and reliability.
- Analyzed customer behaviour data, providing actionable insights that increased campaign engagement by 15%.
- Designing and maintaining real-time office dashboards that allow managers and teams to monitor key performance metrics and take timely action.
- Ensured compliance with regulatory policies by implementing data governance practices and documentation standards.

Hischip Software Technologies.

DATA ANALYST INTERN

September 2019 - January 2020

- Analyzing employee's performance data to identify trends, areas for improvement, and creating reports.
- Perform data validation to ensure accuracy, completeness, and consistency across datasets, identifying and rectifying discrepancies or errors.
- Developed predictive models and performed statistical analysis using tools Python's Pandas and NumPy libraries to support hypothesis testing.
- Troubleshoot data integrity issues by cross-referencing multiple data sources and resolving discrepancies.
- Authored a comprehensive research report and presented findings to stakeholders, leading to further exploration and implementation of recommendations.
- Designed experiments and conducted data-driven evaluations, enhancing the reliability of results and ensuring accuracy.
- Implemented data governance policies to ensure accuracy and consistency across organizational dashboards.
- Generated daily, weekly, and monthly reports using Excel and Python, automating data extraction and presentation for management decision-making.
- Conduct data validation to ensure data accuracy, consistency, and completeness across multiple systems and databases.

Certifications

-
- Programming For Everybody (getting started with python)
 - Create Charts and Dashboards Using Microsoft Excel
 - Overview of data visualization

Achievements

-
- Directed the analysis of large-scale datasets leading to a 15% increase in operational efficiency. Automated data extraction and reporting processes, reducing manual efforts by 40%.
 - Increased reporting efficiency by automating over 50 routine reports, reducing report generation time by 50%.
 - Successfully migrated company data processes to cloud-based platforms, reducing infrastructure costs.
 - Automated manual reporting processes using tools like Python, SQL, and Tableau, reducing reporting time by 30% and improving operational efficiency.
