Education

Bachelor of Science in Cyber Security

University of Tulsa • 2021–2025 • GPA: 3.0

Certifications and Skills

CompTIA Security+ (Active)

Wireshark, Linux, Python, Java, C/C++, WordPress, Log Analysis, Incident Response, Docker, VPN Configuration, Git, Web Security(JWT, Flask),

Experience

Centific, Data Annotator

San Antonio, TX 08/2025 - Present

Labeled, categorized, and validated large volumes of data to support machine learning model development. Identified patterns and inconsistencies across datasets, improving annotation accuracy and reducing error rates. Adapted quickly to new tools and workflows while maintaining high-quality deliverables under strict standards. Collaborated with project leads to clarify ambiguous cases and ensure alignment with model-training requirements.

Texas Public Radio, Intern

San Antonio, TX 06/2025 - 08/2025

Supported Digital Operations maintaining website content and CMS functionality. Provided technical assistance during live events, including equipment setup and troubleshooting. Managed media assets and coordinated with staff to ensure reliable digital workflows.

Quillify, Technical Intern

Tulsa, OK 05/2024 - 08/2024

Developed and updated WordPress pages to support platform expansion. Built Python-based data wranglers and web scrapers, increasing SQL database volume by 10%+. Assisted in technical demonstrations and onboarding for prospective customers.

University of Tulsa, Esport Technical Attendant

Tulsa, OK 01/2022 – 04/2022

Provided event-floor technical support for competitive gaming systems and peripherals. Troubleshoot network, hardware, and software issues to maintain reliable operations.

Home Lab and Projects

OCII Website Spoofing: Flask-based phishing simulation for training and spoof detection.

Multithreaded Web Server (C): Concurrent POSIX-threaded server with request buffering and scheduling.

JWT Authorization System: Python-built JWT authentication with secure session control.

Custom Memory Allocator (C): Manual heap manager using sbrk() with block splitting/coalescing.

WireGuard VPN Deployment: Encrypted remote access environment using Docker + WireGuard.

Cyber Competitions

Dragos CTF 2025: Investigated ICS-focused attack simulations and performed forensic log analysis.

HiveStorm Blue Team: Detected red-team activity through log review and applied mitigation under time pressure.
