

Harsh Bhanderi

Data Engineer/Analyst

Programming Languages:

Python, SAS, R, SQL, Java, Bash

Analytics:

Data Cleaning & Pre-processing,
Data Mining and Extraction(ETL),
Data Visualization, Statistical
Analysis, Data Warehousing,
Data Governance, Probability

Machine Learning:

Model Selection & Evaluation,
Feature Selection & Engineering,
Model Training & Validation,
Deployment & Monitoring

Data Visualization Tools:

Tableau, Power BI, SAP Business
Intelligence Objects, Qlik

Database:

MS-SQL Server, Oracle, MySQL,
Amazon Redshift, MongoDB,
Cassandra, PostgreSQL

Soft Skills:

Teamwork and Communication,
Problem-solving, Attention to
Detail, Logical Thinking, Time
Management, Adaptability

Cloud Computing:

AWS, GCP, Azure

Education:

Data Science, Master of Professional Studies - 2021

University of Maryland, BC

GPA: 3.8

Coursework:

Data Wrangling and Feature
Engineering, Machine Learning,
Big Data Analytics, Database
Management, NLP, Data Ethics,
Capstone Project in Weather
Forecast using ARIMA model

Bachelor of Engineering in Information Technology

GPA: 3.9

Gujarat Technological University

About Me:

Dedicated and detail-oriented data analyst with a strong analytical mindset and a passion for transforming raw data into meaningful insights. Proficient in data manipulation, statistical analysis, and data visualization techniques, I excel in uncovering trends, identifying opportunities, and supporting evidence-based decision-making. Committed to delivering accurate and impactful results, I thrive on utilizing data to drive business improvements and foster data-driven strategies.

Experience:

Michigan Medicine, University of Michigan, Ann Arbor, Michigan

Database Analyst/Programmer, Dept of Internal Medicine

Oct 2023 - Current

- Building reports, graphs, and dashboards for research with user-friendly data visualizations that are effective in increasing awareness among hospital members and clinicians across Michigan.
- Writing, testing, and implementing programs to clean, merge, analyze, and maintain large, complex datasets. In addition, maintain, clean, and organise datasets for statisticians.
- Work with stakeholders, team members, and end users to identify and understand HMS clinical data collection needs, challenges, and opportunities.
- Prepare and maintain technical documentation of data and analysis files.
- Collaborate with internal teams and external vendors in the design, implementation, testing, and deployment of technical data collection and specifications.

Database Programmer/Manager, Dept of Radiology

July 2022 - Oct 2023

- Manage and supervise the database management operations at a neuro-imaging research laboratory using SQL, Python, and SAS, ensuring accurate and efficient handling of large-scale data sets, including MRI, PET, and fMRI data of Parkinson's disease and Normal Control Patients.
- Regularly monitor and implement data security measures, including access controls, encryption, and data anonymization techniques, to protect sensitive participant information and ensure compliance with privacy regulations, such as IRB, HIPAA, and GDPR.
- Conduct data cleaning, preprocessing, and transformation(ETL) tasks to prepare data for statistical analysis; design and develop reporting tool features using the Django Framework.
- Collaborate with researchers, clinicians, and IT professionals to assess data needs, define data collection strategies, and establish data dictionaries/metadata standards for research studies.

Tata Consulting Services, Client: USAA, Rockville, Maryland

Sept 2021 - July 2022

Data-Service Analyst

- Developed and implemented data-driven models and techniques to assess risk, evaluate market trends, and optimize pricing strategies for insurance and banking products, resulting in improved profitability and customer satisfaction.
- Collaborated with cross-functional teams to define key performance indicators (KPIs) and established data tracking mechanisms to monitor business metrics, enabling the timely identification of trends, anomalies, and areas for improvement.
- Analyzed customer data to uncover insights related to customer behavior, segmentation, and lifetime value, driving targeted marketing campaigns, product recommendations, and personalized customer experiences.

AlgoFund, Dallas, Texas

Jun 2020 - August 2021

Python Developer

- Actively monitored and analyzed market trends, news, and events to identify potential opportunities and risks, providing insights and recommendations to improve trading strategies.
- I integrated third-party APIs and trading platforms into the trading infrastructure, facilitating trade execution, order management, and reconciliation processes, while ensuring accurate trade reporting and regulatory compliance.
- Successfully converted the existing Python code files into object-oriented programming code with MySQL database queries and delivered less space and time complex solutions with flexibility, scalability, and low maintenance cost.
