

# Harshini Puskuri

## Data Analyst

✉ puskuri.harshini@outlook.com ☎ (731) 451-3934 📍 Memphis, TN 🔗 [linkedin.com/in/puskuri-harshini](https://www.linkedin.com/in/puskuri-harshini)

### Summary

Data Analyst with 4+ years delivering data-driven business insights, building modern cloud data pipelines, and developing AI/ML-ready datasets. Expert in SQL, Python, and BI tools with proven success reducing reporting overhead by 60%, improving data accuracy by 30%, and enabling predictive analytics for customer behavior, churn, and operations. Skilled in **multi-cloud environments (AWS, Azure, GCP)**, real-time streaming analytics, and AutoML platforms. Adept at translating business needs into scalable solutions while ensuring **data governance, security compliance (GDPR, CCPA)**, and ethical AI practices.

### Skills

#### Languages & Querying

SQL (Advanced – Window Functions, CTEs, Indexing), Python (Pandas, NumPy, Seaborn), R

#### ETL & Data Engineering

AWS Glue, Azure Data Factory, Apache Airflow, dbt, Data Wrangling, Star/Snowflake Schemas

#### Streaming & Real-Time Processing

Apache Kafka (basic integration), Azure Stream Analytics

#### AI & Prompt Engineering

OpenAI, Claude.ai, prompt optimization for analytics workflows

#### Collaboration & DevOps

Git, Docker, JIRA, Confluence, Azure DevOps, VS Code, Jupyter Notebook

#### Visualization & BI

Power BI (DAX, Real-Time Dashboards), Tableau, Excel (VBA, Macros), Data Storytelling

#### Cloud & Warehousing

Snowflake, Google BigQuery, Amazon Redshift, Databricks, Apache Spark

#### ML & Advanced Analytics

Regression, Classification, Time Series Forecasting (ARIMA, Prophet), Scikit-learn, AutoML (H2O.ai)

#### Governance & Security

GDPR, CCPA, Data Encryption, Data Lineage, Access Control Policies

### Professional Experience

#### Data Analyst

Sep 2024 – Present

*McKinsey & Company*

- Enabled real-time enterprise insights by developing **streaming ETL pipelines** with Python, SQL, AWS Glue, Apache Airflow, and Kafka, integrating SAP, Flexera, and other enterprise sources.
- Improved ML data preparation efficiency by 30% for churn prediction, segmentation, and LTV analysis using Snowflake and Databricks.
- Reduced ad hoc reporting needs by 10+ hours/week with interactive dashboards in **Power BI (real-time) and Tableau** for leadership KPI monitoring.
- Automated 5,000+ REST API workflows with Selenium and PySpark, eliminating manual license usage tracking and improving accuracy.
- Integrated anomaly detection using **Spark + Azure Stream Analytics** with automated threshold alerts.
- Implemented **data governance controls** ensuring GDPR/CCPA compliance across multiple datasets.

#### Data Analyst

Aug 2019 – Dec 2022

*CueTech Systems*

- Consolidated multi-source datasets (SAP, Salesforce, Excel, Snowflake) into **multi-cloud ETL pipelines** using Python, dbt, AWS Glue, and Azure Data Factory.
- Designed 10+ dynamic Power BI/Tableau dashboards for operations, sales, and academic performance with DAX-based KPI tracking.
- Optimized SQL Server and Teradata queries (CTEs, indexing) to reduce execution time by 50%.
- Conducted A/B testing, ANOVA, and time series forecasting for curriculum effectiveness and retention strategies.
- Automated Excel reporting with Python + VBA, reducing manual workload by 60%.
- Performed **data validation and lineage documentation**, improving accuracy and stakeholder trust by 30%.

## Education

### Master's in Data Science

*University of Memphis*

*Relevant Coursework:* Data Mining, Machine Learning, Data Visualization, Statistical Inference, Cloud Computing

## Projects

### Customer Lifetime Value Prediction & Segmentation

*Python, R, Power BI, Scikit-learn, AutoML (H2O.ai)*

- Built regression/classification models to forecast LTV for retail customers, segmented into value tiers, and visualized in Power BI for marketing and retention strategies.
- Achieved a 15% improvement in upsell conversion using predictive segmentation insights.

### Real-Time KPI Dashboard for Operations

*SQL, Power BI, Snowflake, DAX, Kafka*

- Integrated Power BI with Snowflake and Kafka for **live tracking** of logistics and IT performance across four business units.
- Reduced reporting delays from 24 hours to near real-time, enabling faster decision-making.
