

Harshita Loganathan

Boston, MA, 02130 • (413) 379-3215 • hloganathan@umass.edu • <https://www.linkedin.com/in/harshitaloganathan/>

Aspiring Data Analyst with hands-on experience in data visualization, reporting, and analytical workflows across diverse datasets and tools.

EDUCATION

University of Massachusetts, Amherst, USA	Sep 2023 – May 2025
Master of Science in Computer Science	GPA: 3.6/4
Anna University, Chennai, India	Aug 2019 – Apr 2023
Bachelor of Engineering in Computer Science and Engineering	GPA: 9.1/10

SKILLS

Languages: JavaScript, Python, Java, C++, SQL, R, Kotlin, Solidity, HTML/CSS, TypeScript, Bash, GraphQL
Libraries: React, Node.js, Flask, MongoDB, TensorFlow, Keras, Pandas, NumPy, Next.js, Bootstrap, Tailwind CSS
Tools: Git, Docker, AWS, Firebase, Tableau, Power BI, WordPress, PostgreSQL, Jira, Figma, Vite, Jenkins, Netlify, Vercel
Data & DevOps: CI/CD, Redis, Spark, MapReduce, REST APIs, MySQL, Excel, Web Security (WAF, 2FA), Apache Kafka, Airflow

WORK EXPERIENCE

ASOR(American Society of Overseas Research)	Boston, USA
Full Stack Developer & IT Coordinator (Full-Time)	Jul 2025 – Present
- Built and maintained dashboards and ETL workflows using Python, SQL, Power BI, and Tableau, reducing reporting time by 40% and enabling real-time insights.. - Conducted log analysis and performance monitoring on SQL databases and internal systems to identify bottlenecks and improve reliability for 5,000+ daily users. - Partnered with cross-functional teams to translate business needs into data-driven solutions, ensuring accuracy and usability of reporting pipelines. - Automated backup and recovery workflows for 10GB+ datasets, contributing to 99.9% system uptime and business continuity.	
Full Stack Developer (Internship)	Sep 2024 – May 2025
- Designed and implemented data tracking solutions with SQL and JavaScript to capture user behavior and generate insights for content strategy. - Supported data visualization efforts with Power BI, Tableau, and Excel, improving decision-making for research and administrative teams. Streamlined reporting processes with SQL queries and Python scripts, reducing manual workload by 20%.	
Qriocity Ventures PVT LTD	Chennai, India
Software Developer Intern	Jun 2023 – Aug 2023
- Developed a data retrieval and ranking engine for 500K+ records, improving query latency to under 200ms and increasing search accuracy by 30%. - Collaborated with finance and product teams to extract partner revenue data and develop logic for content performance ranking, introducing data pipelines that evaluated financial viability of partners. - Created geospatial visualizations using Python, Pandas, and Folium, improving emergency response routing efficiency by 15% across 500+ service zones.	
CISCO	Chennai, India
Cisco Cyber Security Intern	May 2021 – Jul 2021
- Built basic network monitoring dashboards in Python to visualize live traffic and identify anomalies. Analyzed and resolved traffic conflicts using Wireshark, contributing to stable network performance across 500+ devices.	

PROJECTS

Financial Risk Dashboard Project Python, Excel, Power BI	
Built a dashboard to track the financial health of startups (pre-seed to Series B). Collected and normalized financial statements (P&L, balance sheet, and cash flow). - Designed a risk scoring model using liquidity ratios, burn rate, and churn metrics. Created compliance tracking logic aligned with funding agreements. Presented findings to a review committee; enabled proactive decisions on funding and credit risk.	
BI Visualization Suite Power BI, Tableau, Excel	
- Built interactive dashboards using Tableau and Power BI, featuring LOD calculations, dynamic filters, and drill-down visualizations that boosted data reliability by 30%. - Streamlined reporting with Power Query and Excel macros, reducing manual workload by 40% and enabling real-time business decisions. - Built interactive dashboards for loan performance, customer retention, and inventory turnover. Applied DAX and calculated fields for drill-down analysis and KPI tracking.	
Textile Demand Forecasting & Categorization PostgreSQL, Python	
- Created an end-to-end ML pipeline using Random Forest and SVM to classify 15+ textile categories, increasing classification accuracy by 35%. - Forecasted textile demand using ARIMA and Prophet, improving inventory planning efficiency by 20%. Optimized data handling workflows using SQL and Pandas, cutting processing time by 40%. - Built reusable data pipelines for preprocessing and cleaning inconsistent records, improving model training quality. - Conducted exploratory data analysis (EDA) to uncover trends in texture-weave-color correlations, supporting actionable insights for procurement teams.	

CERTIFICATIONS

- Google Data Analytics Professional Certificate**
