Work Experiences

General Services Administration

Washington D.C

Program Analyst (Data Analyst)

May 2024 – Present

- Validated, cleaned, and exported large datasets in Google Sheets, enabling the data team to deliver 100+ accurate reports that informed the MVP of the GSA Fleet Modernization Project.
- Developed 40+ SQL scripts in MySQL Workbench and DBeaver, uncovering key insights that influenced decisions impacting a fleet of 200,000+ government vehicles.
- Built and optimized data pipelines, integrating data from 19 legacy applications into a unified system within the GSA Fleet Software Modernization cycle, accelerating reporting efficiency in an Agile Jira environment.
- Designed and deployed BI dashboards in JasperSoft and MicroStrategy, empowering 20+ stakeholders to make data-driven decisions and improving reporting efficiency by 25%.
- Authored and executed test scripts and validation procedures, identifying defects and ensuring 100% system readiness prior to MVP deployment.
- Led User Acceptance Testing (UAT) with 20+ end users, capturing feedback that enhanced UX design and achieved a 100% user satisfaction rate.
- Monitored and maintained GSA Fleet website data, resolving technical issues for 1,000+ employees and customers, ensuring uninterrupted operations.

Velera

St. Petersburg, FL

Business Development Analyst

May 2025 - August 2025

- Conducted root cause analysis of Velera's case handling system and workflows, identifying process inefficiencies and implementing solutions that streamlined cross-departmental collaboration by 15%.
- Developed interactive automated BI dashboards in Salesforce and Power BI, enabling 20+ internal stakeholders to monitor 15+ KPIs and Scorecards in real time and supporting a 12% improvement in operational efficiency.
- Created and maintained 50+ custom and several automated reports in Excel and Salesforce, providing actionable insights that increased sales pipeline visibility by 25% and contributed to a 10% lift in qualified leads.
- Developed financial models in Excel to forecast revenue growth, optimize budgeting, and support strategic decision-making.
- Managed 100+ ad-hoc data requests as the primary liaison for Credit Union Representatives, translating complex data into clear findings for technical and non-technical audiences, uncovering insights that drove a 15% increase in partnership opportunities.
- Led comprehensive analysis of Gen Z financial trends, shaping targeted strategies for credit unions that improved outreach effectiveness and positioned the organization to capture a larger share of the next-generation client base.

EDUCATION

University of Maryland College Park, B.S. in Information Science

Aug 2021 - May 2025

GPA: 3.9, Deans List Honors

Minor: Risk Management

Concentration: Data Science

Relevant Coursework: Systems Design & Analysis, Advanced Data Science, Statistics, Applied Calculus, , Advanced Python Programming, Database Design & Modeling, User Centered Design, Info Needs & Assessment, Tech Infrastructure & Architecture

TECHNICAL SKILLS

Programming Languages: C++, Python, Java, SQL, R Programming, XML, KML, HTML, CSS

Frameworks & Tools: Salesforce, Jira, TensorFlow, PyTorch, MySQL Workbench, R Studio, SQL Oracle Database, Visual Studio, Github, Tableau, JasperSoft, DBeaver, Microstrategy, Power BI, MS SQL Server, Excel, Google Sheets, Qlik, Databricks

Other Notable Skills: Machine Learning, Data Querying, Data Analytics, Root Cause Analysis, Data Modeling, Data Visualization, Predictive Analytics, Business Intelligence, Process Improvement, Workflow Optimization, Requirements Gathering, Data Migration/Integration, ETL, Statistical Analysis, Data Reporting, Financial Analytics, Systems Testing, UAT, Lean Six Sigma, Agile, Financial Analysis, Business Cases, Process Mapping, Data Governance, VLOOKUP, Pivot Tables, Macros, Supply Chain Analysis, Change Management, Outlook, Forecasting, Credit Union Principles, Risk Analysis

PROJECTS

Interactive Covid-19 Vaccination Dashboard [Dashboard](#) | Tableau, Excel

- Analyzed and synthesized a vast dataset comprising over 120,000 global vaccination entries, transforming it into a dynamic and interactive dashboard for comprehensive insights into the global COVID-19 vaccination landscape.

Credit Risk Machine Learning Modeling & Analysis [Repository](#) | Python, Visual Studio, Github

- Used python, seaborn, matplotlib, scikit-learn to create visualizations and train several machine learning models to predict credit risk with an improvement of 95% accuracy, precision and F1 score.
- Performed statistical analysis on a credit risk dataset and made multiple explanatory visualizations.
