PROFILE

Data Analyst with 4+ years of proven experience delivering scalable data solutions, actionable insights, and business-driven reporting across finance, consulting, and technology domains. Skilled in building robust ETL pipelines, developing automated dashboards, and executing complex analyses to support strategic decisions and operational efficiency. Proficient in SQL, Python, Power BI, Tableau, and Snowflake, with hands-on experience in statistical modeling, A/B testing, and forecasting. Experienced in collaborating with cross-functional teams to define KPIs, translate business objectives into data products, and implement governance frameworks to ensure data integrity and compliance. Adept at working with cloud data platforms (AWS, Azure), modern data stacks, and agile environments to deliver analytics solutions that drive measurable impact. Recognized for bridging the gap between technical data systems and business outcomes through clear communication and data storytelling.

SKILLS

Programming & Query Languages: SQL (MySQL, PostgreSQL, T-SQL), Python (Pandas, NumPy, Matplotlib, Seaborn), R (tidyverse)

Data Analysis & BI Tools: Power BI, Tableau, Excel (Power Query, Pivot Tables, Forecasting), Google Analytics, Looker

Data Management & ETL: Data Cleaning & Wrangling, Data Modeling, Advanced SQL (Joins, CTEs, Window Functions), ETL Development (Alteryx, SSIS, Apache Airflow), Data Validation, Power Query

Cloud Platforms & Warehousing: AWS (Redshift, S3), Azure (Data Factory, Synapse), Snowflake, Google BigQuery, Data Lake Architecture

Big Data & NoSQL (Basic Exposure): Apache Spark, Hive, PySpark, MongoDB (for semi-structured data handling)

Statistical & Predictive Analytics: A/B Testing, Time Series Forecasting (ARIMA), Regression Analysis, Clustering, Descriptive Analytics

Automation & API Integration: Web Scraping (Selenium, BeautifulSoup), REST APIs, Workflow Automation (Airflow), Excel Macros

Version Control & DevOps Tools: Git, GitHub, Bitbucket, CI/CD Basics (Jenkins, Git-based pipelines)

Reporting & Visualization: Executive Dashboards, KPI Monitoring, Financial Reporting, Cross-Departmental Reporting

Agile Project Execution: Agile (Scrum, Kanban), Sprint Planning, JIRA, Confluence, Cross-functional Collaboration

Professional Skills: Business Acumen, Stakeholder Communication, Problem Solving, Data-Driven Decision Making, Strategic Thinking

PROFESSIONAL EXPERIENCE

Edward Jones, Data Analyst

Oct 2023 – Present | Remote, USA

- Developed and optimized **end-to-end ETL pipelines** using **SQL** and **Python**, integrating data from cloud-based sources (Snowflake, Redshift) and legacy systems to support enterprise-wide reporting and analytics workflows.
- Collaborated closely with stakeholders to **gather requirements**, define KPIs, and translate business objectives into scalable data solutions aligned with firm strategy and operational goals.
- Built interactive **Power BI and Tableau dashboards** visualizing advisor performance, client retention trends, product usage, and branch-level metrics—delivering decision-ready insights for leadership.
- Conducted **descriptive and predictive analysis**, including regression, forecasting, scenario planning, and anomaly detection, to inform investment strategies, retention modelling, and product optimizations.
- Implemented **data validation and cleansing procedures**, identifying discrepancies, and executing corrective actions to enhance data reliability and compliance readiness for regulatory reporting.
- Automated recurring analytics workflows using **Apache Airflow**, reducing manual processing and accelerating data delivery to analysts and business users.
- Participated in **cross-functional Agile teams**, contributing to sprint planning, sprint demos, and QA cycles with finance, compliance, and product stakeholders to ensure solution fit and quality.
- Contributed to **data governance initiatives** by creating and maintaining metadata catalogs, standardizing definitions, and improving transparency across analytics assets.

Hexaware Technologies, Data Analyst	Feb 2020 – Jun 2022 Hyderabad, India
• Worked on client-facing analytics projects in retail and banking domains, building automated ETL pipelines using SQL and Python to integrate data from Oracle, MySQL, and flat files. • Designed and published interactive dashboards in Power BI and Tableau, enabling business users to monitor KPIs, customer behavior, and campaign performance in near real-time. • Conducted ad-hoc and exploratory analysis to support client reporting, market segmentation, and ROI optimization for digital initiatives. • Created and maintained complex SQL queries and stored procedures, supporting reporting needs for sales, customer service, and finance teams. • Collaborated with cross-functional teams (onshore and offshore) to translate business requirements into data models, reports, and dashboard solutions aligned with client SLAs. • Contributed to data cleansing and wrangling efforts, improving data accuracy and reducing reporting delays by 30% through automation and validation rules. • Participated in Agile sprint ceremonies, sprint planning, QA cycles, and documentation efforts to ensure delivery of high-quality, scalable analytics products. • Supported project documentation, business rule translation, and metadata cataloging for improved reusability and stakeholder transparency.	

EDUCATION

University of Central Missouri, Master of Science ,computer science	Aug 2022 – May 2024 Missouri, USA
Jawaharlal Nehru Technological University, Bachelor of Technology in Computer Science and Engineering	Jun 2017 – May 2021 Hyderabad, India

PROJECTS

Distributed Multi-Traffic Scene Perception System	Feb 2024 – Jun 2024
• Designed a perception system for autonomous vehicles using supervised learning techniques, improving object recognition in complex traffic environments. • Engineered an 8-dimensional visual feature matrix and trained models for accurate scene classification. • Achieved high adaptability by tuning models for dynamic multi-scene scenarios and real-time responsiveness.	
Credit Card Fraud Detection Using Machine Learning	Apr 2023 – May 2023
• Built a real-time fraud detection system using Python libraries (Keras, Scikit-learn, Pandas), capable of classifying suspicious transactions with high precision. • Trained and evaluated multiple algorithms including Decision Tree, SVM, and Neural Networks for optimized fraud detection. • Tuned models to minimize false positives using imbalanced data handling techniques and validation strategies.	
IMDB Movie Recommender Engine	Jan 2021 – Apr 2021
• Developed a content-based recommendation engine using IMDB metadata including genres, cast, and plot keywords. • Calculated similarity scores using cosine distance and applied IMDB’s weighted average ranking formula for optimized recommendations. • Visualized user preferences and content groupings using Python (Matplotlib, Seaborn, Pandas).	

CERTIFICATES

- Microsoft Azure Data Engineer Certification
- ServiceNow Certified Application Developer (CAD)
- ServiceNow CSA Certification
- Machine Learning with Python (DataCamp)
- C, C++, SQL Server, HTML (Udemy)
