

HEMA SURESH

ENTRY-LEVEL DATABASE ANALYST

ABOUT ME

An initiative-taking and skilled candidate looking for an entry-level position as a database professional. Solid knowledge in writing well-designed and testable code. Strong ability to execute full SDLC (Software Development Life Cycle).

AREAS OF EXCELLENCE

Computer Programming & Coding	Product & Project Development
Software Development	Object Oriented Design
Gathering & Analysis	Software Testing & Debugging
Development & Enhancement	Problem Analysis & Resolution

ACCOMPLISHMENTS

- Capstone project that implemented the design and development of a rental car database. Features included multiple rental locations, multiple sizes of vehicles, reservation and cancellation, checkout and return of cars, establishment of maintenance cycles after specific mileages, and retirement of cars after max use mileage. It also included standard reports of availability by location, by type and size; and vehicles in maintenance.
- Regression analysis of Tesla stock price to establish correlation between dependent variables like High-Low price differential, Close-Open differential against and trading volume.
- Basics of Salesforce application at Nuvem consulting.
- Designed and implemented a process to compute employee profitability on projects, by computing the percentage of billable and productive work hours for consultants at Nuvem.
- Earlier experience in the banking and finance industries – in trust operations, corporate actions across multiple banks in the USA.
