## PROFESSIONAL SUMMARY

- Snowflake Data Engineer with 3+ years of experience across industries such as manufacturing, banking, healthcare, and retail.
- Hands-on expertise in Snowflake features including Snow SQL, Snowpipe, Streams, Tasks, Time Travel, Fail Safe, Cluster Keys, Stored Procedures, Views, Copy/Validate commands, and Snowflake APIs.
- Implemented end-to-end migration of on-premise databases to Snowflake cloud, including schema conversion, data migration, and performance tuning.
- Strong experience in designing, building, and automating scalable ETL/ELT pipelines using Snowflake, Python, SQL, Azure Data Factory (ADF), Matillion, and DBT.
- Proficient in data modeling techniques, including dimensional modeling, star/snowflake schemas, normalization, and de-normalization.
- Hands-on experience of data warehousing concepts like data profiling, cleansing, transformation, loading, master data management, and metadata management.
- Designed modular and reusable DBT models with support for incremental loads, seeds, macros, and materializations for Snowflake transformations.
- Developed robust ADF pipelines including linked services, datasets, parameters, and triggers for orchestrating data across Azure and Snowflake environments.
- Created and managed Matillion orchestration and transformation jobs for automated ETL workflows with Snowflake.
- Skilled in performance tuning of SQL and PL/SQL queries using indexing strategies, explain plans, query rewrites, and partitioning.
- Built business-driven views and curated datasets for downstream applications and reporting tools such as Power BI, Tableau.
- Extensive experience using AWS services such as EC2, S3, IAM, and configuring secure data ingestion into Snowflake.
- Designed and managed ETL workflows with SSIS including control flow and complex data flows.
- Developed SSAS cubes with measures, attributes, and partitions for OLAP-style reporting.
- Implemented Python scripts for data ingestion, validation, transformation, and orchestration across hybrid environments.
- Experienced in designing and orchestrating scalable ETL/ELT workflows using Apache Airflow.
- Proficient in building and optimizing DAGs to automate, schedule, and monitor complex data pipelines.
- Skilled in integrating Airflow with Snowflake, SQL, and cloud platforms for enterprise data solutions.
- Proven track record of analyzing and rewriting legacy SQL/Shell scripts into efficient PySpark/SQL workflows.
- Experience with Agile methodologies, including sprint planning, backlog grooming, and using JIRA for task and delivery tracking.
- Excellent communication and interpersonal skills with a consistent track record of successful collaboration across cross-functional teams.

## TECHNICAL SKILLS:

|                           |   |                                |
|---------------------------|---|--------------------------------|
| • Operating System        | : | Windows, Linux, Unix           |
| • Databases               | : | MySQL, SQL Server, Oracle      |
| • Datawarehouse           | : | Snowflake, Teradata, Big Query |
| • Cloud Platforms         | : | Azure, AWS, GCP                |
| • Programming Languages   | : | Python, JavaScript, PySpark    |
| • ETL/ELT                 | : | ADF, Matillion, SSIS, DBT      |
| • Reporting               | : | SSAS, Tableau, PowerBI         |
| • Orchestration           | : | Airflow                        |
| • Messaging Tools         | : | Apache Kafka, Azure Event Hub  |
| • Version Control & CI/CD | : | Git/Azure DevOps               |

## PROFESSIONAL EXPERIENCE

**Client: Albertsons, El Paso, TX**

**Role: Snowflake Data Engineer**

**Oct- 2024- till date**

**Responsibilities:**

- Designed and implemented an end-to-end Snowflake data warehouse architecture for enterprise analytics, aligning database, schema, and warehouse configurations with business domains.
- Developed scalable ELT pipelines to extract data from multiple sources such as AWS S3, APIs, SQL Server, and flat files, and load it into Snowflake using Snowpipe, Streams, and Tasks for near real-time processing.
- Performed data modeling using dimensional and star schema designs to ensure optimal query performance and efficient storage utilization.
- Optimized query performance through clustering keys, result caching, query profiling, and warehouse size tuning, improving response times and reducing compute costs.
- Implemented a robust role-based access control strategy in Snowflake with granular privileges and integrated it with Azure Active Directory for secure and compliant data access.
- Automated data ingestion and transformation workflows using Python, Airflow, and Snowflake Tasks to enable scheduled and event-driven pipeline execution.
- Integrated Snowflake with Power BI to support business reporting and self-service analytics, ensuring optimized query performance and secure data connectivity.
- Developed reusable SQL scripts and stored procedures for data validation, reconciliation, and incremental loads using Streams and Change Tracking.
- Configured Snowflake Resource Monitors and query history tracking to monitor cost and performance metrics, enabling proactive tuning and governance.
- Implemented Snowflake security best practices including data masking, secure views, column-level security, and data encryption for compliance with organizational standards.
- Migrated legacy on-premise SQL Server data warehouse to Snowflake using AWS S3 as a staging layer and automated the migration with COPY INTO commands.
- Built a metadata-driven framework for dynamic table creation, schema validation, and audit logging using Python and Snowflake Information Schema.
- Created detailed documentation and data lineage diagrams to maintain transparency and traceability across ingestion, transformation, and consumption layers.
- Collaborated with data engineers, analysts, and business users to translate analytical requirements into scalable Snowflake data models and optimized query structures.
- Applied DevOps and CI/CD principles for Snowflake deployments using GitHub Actions and Terraform to ensure version-controlled and automated releases.
- Designed and implemented a data retention and archival strategy using Time Travel, Fail-safe, and storage optimization features to manage historical data effectively.

**Hartford Health care, Hartford**

**Jan- 2024-Sep 2024**

**Role: Snowflake Data Engineer**

**Responsibilities:**

- Created data pipeline for several events of ingestion, aggregation and loaded consumer response data from AWS S3 bucket into Hive external tables.
- Used Matillion tool blob storage component and loaded the tables to snowflake Stage layer
- Collaborated with data governance teams to ensure data quality, security, and compliance.
- Implemented a 'server less' architecture using API Gateway, Lambda, and Dynamo DB and deployed AWS Lambda code from Amazon S3 buckets. Created a Lambda Deployment function and configured it to receive events from S3 buckets.
- Created concepts such as symmetry, fractals, or crystalline structures in both astronomy and snowflake formation. Worked extensively on AWS Components such as Airflow Elastic Map Reduce (EMR). Athena, Snowflake.
- Designed and implemented Data Synchronization from Oracle 12c to Snowflake database in Informatica intelligent cloud services (IICS).
- Performed day-to-day integration with the Database Administrators (DBA) DB2, SQL Server, Oracle and AWS Cloud teams to ensure the insertion of database tables, columns and its metadata have been successfully implemented out to the DEV, QUAL and PROD region environments in AWS Cloud - Aurora and Snowflake.
- Create a Lambda function to run the AWS Glue job based on the de need AWS S3 event
- Created monitors, alarms, notifications and logs for Lamia functions, Glue Jobs using CloudWatch
- Worked on scalable distributed data system using Hadoop ecosystem in AWS EMR and MapR (MapR data platform).
- Experience with Data Build Tool (DBT) to perform Schema Tests, Referential integrity Tests, and Custom Tests the data and ensured Data Quality.
- Involved in configuring Azure platform for data pipelines, ADF, Azure Blob Storage and Data Lakes and building workflows to

automate data flow using ADF.

- Very good exposure and rich experienced in ETL tools like Alteryx, Matillion & SSIS
- Set up full CI/CD pipelines so that each commit a developer makes will go through standard process of software lifecycle and gets tested well enough before it can make it to the production.
- Developed and maintained data dictionary to create metadata reports for technical and business purpose.
- Facilitated users to scan their documents on the Shoptalk app instantly through the Python application and proceed with registration without any friction. Thus, increasing better user experience.
- Customer feedback identification and generate metadata of the customer survey using Informatica and DB2 by creating business rules to pull records from ODS sourced from Salesforce
- Migrated the data from SAP, Oracle and created Data mart using Cloud Composer (Aipfl6W) and moving Hadoop jobs to Datapost workflows.
- Contributed to the creation of Pyspark Data Frames in Azure Databricks to read data from Data Lake or Blob storage and manipulate it using Spark SQL context.
- I have experience in Unit testing, integration testing while moving the code from development to production.
- I created sessions, configured Work flows to extract data from various sources, transformed data, and loaded it into the data warehouse.
- I wrote UNIX shell Scripts & PMCMD commands for FTP of files from remote server and backup of repository and folder.
- Design and Develop ETL Processes in AWS Glue to migrate Campaign data from external sources like S3, Parquet/Text Files into AWS Redshift.
- Build a program with Python and Apache beam and execute it in cloud Dataflow to run Data validation between raw source file and big query tables.
- Actively working on Azure, Azure SQL Database, Azure SQL Data Warehouse, ADF v2, Blob Storage, PolyBase and using SSIS in ADF environment on purpose of scripting calling APIs and so on.
- Building a Scala and spark based configurable framework to connect common Data sources like MYSQL, Oracle, Postgres.
- Created several Data bricks Spark jobs wif Pyspark to perform several tables to table operations.
- Developed spark programming code in Python Databricks workbooks.
- Extensive Knowledge and hands-on experience implementing PaaS, Laas, SaaS style delivery models inside the Enterprise (Data center) and in Public Clouds using like AWS, Google Cloud, and Kubernetes etc.

Technologies: End to end data platform with Snowflake, Matillion, Power BI, Qu bole, Data bricks, Tableau, Cloud Platform (GCP), Google Vision APIs, GitHub, JIRA, Apache Spark, HBase, Apache Kafka, Map Reduce, Snowflake, HDFS, Scala, Spark SQL, Python, Tableau.

**Client: Aspirant soft solutions Hyderabad**

**Mar 2022- June 2023**

**Data Engineer**

**Responsibilities:**

- Understanding the scope and operational requirements of the project.
- Responsible for providing leadership, technical direction, and oversight to a team as they deliver technical solutions.
- Developed Informatica IICS mapping and Task to load data into Target tables.
- Experience in converting Informatica Power Center mappings into IICS.
- Analyzing on the As-Is method and prepared the solution and logic for the To-be method in Snowflake.
- Working on Migration of other DB's data and Excel data using SNOW SQL, SNOW LOAD, SNOW PIPE, uploading Data into Snowflake using Python script.
- Working on Data Injection from Teradata to Snowflake.
- Evaluate Snowflake Design considerations for any change in the application.
- Converting Existing ETL Workflows to support Snowflake Functionality.
- Worked with Business Analysts to translate business requirements into design documents and source-to-target mapping documents that served as the blueprint for ETL work.
- Conducted Review sessions with SME's and Business users for better understanding of the requirements.
- Designed ETL process flows for entire applications and developed data mapping spreadsheets to define transformation rules for each stage of ETL process.
- Extensively worked on the stored procedure and Data pipeline using Snowflake, Informatica Mapping.
- Designed and Developed Complex Data Transformation Mapping processes using Informatica Power Center, IICS.
- Used Teradata External loaders like BTEQ, FAST LOAD to load data from source system into target tables in Teradata database.
- Extensively used various Informatica transformations like Filter, Router, Lookups, Update Strategy, Joiner, Source Qualifier, Expression, Sorter, and Aggregator.

- Implemented Performance tuning techniques at Informatica level and Database level for better performance of loading or updating relational tables.
- Responsible to ensure the delivery of the project as per the schedule.
- Responsible for identifying and mitigating risks involved in the project execution.
- Involve in technical discussion and assess the impact in case of design changes.
- Accountable for Unit Testing, Integration testing, Defect analysis and fixing.
- Testing coordination with functional users and business application teams for any issue.
- Involve in preparation of design documents and project support documents.
- Conduct meetings with onsite and offshore team to discuss on project status.

## **EDUCATION:**

- **Bachelor's in computer science 2023**
- **Master's in Information Systems, Saint Louis University 2025**
