Summary

Full Stack Java Developer with 3+ years of experience architecting scalable full-stack enterprise applications using Spring Boot microservices, React, and MySQL. Expert in performance optimization, secure authentication implementation, and agile feature delivery. Specializes in building robust systems with Redis caching, CI/CD automation, and comprehensive test coverage.

Skills

Methodologies: Agile (Scrum, Kanban), SDLC

Programming Languages: Java, JavaScript, TypeScript, Python, SQL

Frontend Development: React, Redux, HTML5, CSS3, Bootstrap, Jest, React Testing Library

Backend Development: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Microservices Architecture

Database Technologies: MySQL, PostgreSQL, MongoDB, Redis

API Development & Security: RESTful APIs, GraphQL, Swagger/OpenAPI, Postman, OAuth2, JWT

Version Control: Git, GitHub, Bitbucket

Build & Testing Tools: Maven, Gradle, JUnit, Mockito

CI/CD & Containerization: Jenkins, Docker, Kubernetes

Cloud Platforms: AWS (S3, EC2, Lambda, RDS), Microsoft Azure

Development Tools: IntelliJ IDEA, Eclipse, Tomcat, JIRA, Confluence

Soft Skills: Problem-Solving, Team Collaboration, Strong Communication Skills, Attention to Detail, Adaptability

Education

Master of Science in Computer Science

Florida Atlantic University, USA

May 2025

Bachelor of Technology in Computer Science

Kakatiya University, India

June 2022

Work Experience

Full Stack Java Developer | PNC, Florida

August 2024 - Current

- Developed secure customer portal using **React** and **Spring Boot**, implementing **OAuth2/JWT** authentication and **MySQL** database integration, improving user login speed while achieving 99% automated test coverage.
- Delivered 15+ end-to-end features from **React** UI to **Spring Boot** APIs in **Agile** sprints, reducing average feature delivery time from 3 weeks to 10 days through effective collaboration and **JIRA** workflow optimization.
- Led migration of legacy banking platform to **React/Redux** frontend and **Spring Boot** microservices with **MySQL** database and **Redis** caching, reducing transaction processing time by 35% and enabling 24/7 uptime for 50,000+ active users.
- Architected transaction processing system with **React/TypeScript** frontend and **Spring Boot** microservices, implementing **Redis** caching and **MySQL** optimization, successfully handling 10,000+ daily transactions with 99% uptime.
- Optimized **CI/CD pipeline** using **AWS CodePipeline** and **Docker**, automating **React/Spring Boot** deployments to **ECS**, reducing release cycle from 4 hours to 45 minutes and decreasing production incidents by 60% through automated testing.

Full Stack Java Developer | Vivma software Inc, India

August 2021 – July 2023

- Developed patient management system for healthcare clinic using **Core Java** with Object-Oriented Programming concepts, implementing robust data structures and multithreading to handle concurrent patient registration requests efficiently.
- Built responsive patient portal interface using **HTML**, **CSS**, **JavaScript** and **Angular**, enabling patients to seamlessly book appointments, access medical records, and communicate with healthcare providers through user-friendly dashboard.
- Created secure backend services using **Spring Boot** and **JPA** with **MySQL** database, developing **RESTful APIs** to connect **Angular** frontend with patient data.
- Implemented comprehensive testing strategy using **JUnit** and **Mockito** for backend validation, utilized **Maven** for dependency management, and applied design patterns to ensure maintainable code architecture throughout development lifecycle.
- Deployed healthcare application using **Git version control** and traditional server hosting, collaborated closely with medical staff to gather requirements and implement feedback-driven enhancements for improved patient care workflows.

Projects

Smart Sales Forecasting Platform:

- Built a real-time sales prediction dashboard using **Angular** and **Spring Boot**.
- Integrated machine learning models to enhance forecasting accuracy by 20%.
- Implemented **JWT**-based authentication and **OWASP**-compliant security measures.

SQL Injection Defense Module:

- Conducted security testing to identify and patch **SQL injection** vulnerabilities in legacy applications.
- Used parameterized queries and prepared statements, mitigating over 90% of injection threats.
- Documented solutions and trained peers on secure coding practices.
