United States/Open to Relocate | hpatel@tasksemail.com | (210) 201-4648 | [linkedin.com/in/patelhemil077/](https://www.linkedin.com/in/patelhemil077/)

SUMMARY

- Data Analyst with 4+ years of experience delivering data-driven insights through SQL, Python, Tableau, and advanced Excel to optimize business operations and financial processes.
- Skilled in data wrangling, statistical modeling, A/B testing, and predictive analytics, with a strong background in designing scalable dashboards and automation pipelines.
- Experience with ETL pipelines, time series forecasting, and big data (Hadoop, HBase) to enable accurate business decision-making.
- Adept at requirement gathering and stakeholder collaboration, translating business problems into data solutions, and improving operational efficiency by up to 30%.

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, SciPy, Matplotlib, Seaborn), SQL, SAS, C/C++

Machine Learning: Regression, Classification, Clustering, Forecasting (ARIMA, Prophet, LSTM), NLP, Feature Engineering, Model Validation

Data Visualization & BI: Tableau, Power BI, Matplotlib, Seaborn, Excel (Pivot, VBA, Power Query)

Data Engineering & Databases: MySQL, SQL Server, PostgreSQL, Hadoop, Spark, HBase, ETL (SSIS, Informatica)

Business Analysis: Jira, MS Visio, JAD, BRD/FRD/SRS Documentation, Requirement Elicitation, Agile/Scrum, Testing & Validation

Analysis Skills: Cost/Benefit Analysis, Impact Analysis, GAP Analysis, Risk Analysis, SWOT Analysis, Statistical Analysis

Tools: Pre-silicon validation, SOC architecture, Power Controller IP, Bootloader IP, FPGA validation, RTL simulation, UEFI, BIOS, Computer architecture, Git, JTAG, Oscilloscopes, Logic Analyzers

Other Skills: Jira, JAD, UAT, Jupyter Notebook, MS Visio, MS Project, MS SharePoint

PROFESSIONAL EXPERIENCE

METLIFE

United States

Data Analyst

August 2023 – Present

- Engineered optimized SQL queries across 50M+ rows of structured/unstructured financial data, applying advanced indexing, partitioning, and window functions to detect anomalous behavior, improving fraud detection model precision by 15%.
- Automated ETL pipelines with Python (Pandas, NumPy, SQLAlchemy) to validate policy compliance across multiple data sources, reducing audit cycle time by 30% and ensuring 99.9% data integrity.
- Developed dynamic Tableau dashboards integrating predictive KPIs for delinquency, churn, and premium trends, accelerating executive risk decisions by 20% and reducing delinquent account follow-up delays.
- Conducted hypothesis testing (Chi-Square, T-Test) and multivariate A/B experiments on customer engagement strategies, uncovering statistically significant improvements that drove a 12% increase in renewals.
- Built and deployed machine learning models (Logistic Regression, Decision Trees, Random Forest) to predict loan default risk, improving risk classification accuracy by 18% and reducing false positives.
- Partnered with business stakeholders to create requirements traceability matrices (RTM) ensuring data models and dashboards aligned with BRD/FRD specs, improving requirements coverage to 100%.
- Delivered executive-ready insights through statistical storytelling and predictive dashboards, influencing policyholder engagement strategies and driving a measurable 10% uplift in cross-sell opportunities.

INTEL CORPORATION

United States

System Validation Engineer Graduate Intern

June 2022 – May 2023

- Developed and implemented an automation framework using Python and shell scripting to streamline pre-silicon testing workflows, utilizing regular expressions for real-time data extraction and analysis, and integrating an email module for automated reporting.
- Developed and executed functional validation test cases for Intel CPU cores in C++, targeting power management features like C-states, P-states, and clock gating.
- Debugged critical failures and optimized code to ensure test success, contributing to a 5% improvement in overall system stability (based on internal team metrics).
- Automated backend workflows with Git, enabling efficient build and deployment pipelines and improving task completion times by 25%.
- Performed BIOS Boot and Reset simulations on Intel FPGA platforms to validate UEFI booting across multiple operating systems.

- Designed and validated performance test cases for CPU cores using C++, including workload simulations to assess throughput and power efficiency, resolving issues that improved performance by 10%.
- Utilized JTAG, hardware boards, and lab equipment like oscilloscopes for debugging hardware-software integration, identifying and fixing system-level issues during validation.

7FINCORP GROUP

India

Data Analyst

July 2019 – December 2020

- Directed requirement elicitation workshops and converted business needs into structured BRD/FRD/SRS documentation, accelerating development timelines by 15%.
- Conducted SQL-driven exploratory data analysis (EDA) across 10M+ financial transactions, identifying leakage points that recovered \$80K in lost annual revenue.
- Led process mining and GAP analysis using BPMN models, streamlining transaction workflows and cutting processing time by 22%.
- Designed Power BI dashboards with DAX measures to monitor loan performance, acquisition funnels, and risk scores, reducing reporting latency by 40%.
- Executed A/B and multivariate testing of customer promotions with statistical significance validation, increasing campaign ROI by 14%.
- Implemented time-series forecasting models (ARIMA, Random Forest, Prophet) to predict delinquency rates, improving forecast accuracy by 20% and strengthening portfolio risk planning.
- Partnered with UAT teams to validate analytics functionality; documented defects in Jira and resolved 100% of high-priority issues before go-live.

EDUCATION

CALIFORNIA STATE UNIVERSITY

SACRAMENTO, California

Master of Science in Computer Science

January 2021 – December 2023

UKA TARSADIA UNIVERSITY

India

Bachelor of Technology in Computer Engineering

May 2016 – May 2020

PROJECTS

Linux Task Manager and Keyboard Logger

2021

- Developed a Linux Task Manager which display the Linux kernel information with live updates.
- The information was collected from /proc filesystem in Linux kernel and program was written in Python.
- The keyboard logger was able to display the information of different keystrokes.

Time Series Forecasting

2021

- Worked with time series data to predict stock price.
- Models used: fully connected neural network, long short-term memory, CNN.
- LSTM and CNN gave best RMSE score of 2.01 and 0.85 and worked as prominent technique for time series data.

Big data handling

2020

- Reduced the size of the data using Hadoop's MapReduce and handled data manipulation tasks in HBase.
- Learnt HBase queries and filters to manipulate and simplify the data in larger size.
