Professional Summary

Innovative Full Stack Developer with 4.5 years of experience developing and maintaining secure payment solutions and complex workflows. Have experience in all phases of SDLC following Agile/Scrum development methodologies. Expert in building Single Page Applications (SPAs) with Angular and .NET. Implemented industry standards using Java in several real-time projects. Have worked with complex large-scale datasets in multiple business environments using SQL and DynamoDB. Hands on experience in implementing SOLID Principles and also rewarded as a quick learner and as an efficient team player.

Technical Skills

Languages: C++, C#, Java, Python.

Web Technologies: Angular (7+) and React.

API Communication: JAX-RPC, JAX-RS, Apache HttpClient, ASP.NET Web API, ASP.NET Core, Flask, Express.js and NestJS.

Design & Scripting: HTML, CSS, Bootstrap, JavaScript, TypeScript, MVC, Node.js, JSX, JSON, JWT and jQuery.

Databases: DynamoDB, SQL Server, MySQL, PostgreSQL, Oracle Database, Google Spanner and MongoDB.

Testing Frameworks: JUnit, Mockito, TestNG, Cucumber, AssertJ, NUnit, MSTest, Moq, Selenium, pytest, Jasmine and Karma.

Cloud Technologies: AWS (CDK, SDK, EC2, Lambda, ECS, Fargate, S3, EFS, ELB, SNS, SQS, CloudFormation, IAM, VPC, QuickSight, CloudWatch, CloudTrail), Microsoft Azure (Virtual Machines, Codespaces, DevOps, Load Balancer, Blob Storage), Docker and Kubernetes.

Source Control: Git, GitHub, Bitbucket, SourceTree and IDE Managements (IntelliJ, Visual Studio, Eclipse).

Operating Systems: Windows, Mac and Ubuntu.

Design Patterns: Repository, Factory Method, Abstract Factory, Singleton, Observer and Strategy.

Development Practices: Agile, Scrum and Kanban.

Professional Experience

Software Development Engineer

Amazon, Seattle, WA (June 2022 – Sept 2024)

PayStationExtensionsService:

- **Payment Method Development:** Designed and developed a new payment method using java and JAX-RS. Implemented new pilot features for all payment methods that significantly boosted client onboarding efficiency in key regions.
- **Plugin Integration and Optimization:** Created connectors for various plugins across North America, Europe and Far East, which improved system compatibility and decreased integration time.
- **Exception Handling:** Added custom exceptions to increase error handling and system reliability, which decreased downtime incidents and helped in decrease of ticket count to team in service maintenance and helped in better client experience.
- **Automation with SegmentAlarmMaster:** Automated monitor creation and management using AWS ECS, IAM roles and CloudWatch logs for reducing the need of manual monitoring.
- **Performance Improvement:** Upgraded PayPal Plugin by moving to the LUMOS Connector, which reduced delays and increased processing time.
- **Service Migration:** Shifted PrivOps calls to a new service using java and added new IAM roles for gateway access, which reduced throttling and improved response times for clients.
- **Service Migration and Support:** Successfully transitioned 12 services and 35 plugins to CloudAuth which increased both security and operational efficiency with 0% service downtime.
- **Code Optimization:** Regularly cleaned up code and removed unused features in several services to help in building applications faster and boosting performance and lowering maintenance efforts.

Connector Fleet Separation:

- **API Design and Implementation:** Designed AWS Fargate service and built InitiateUploadQuery API and FileUpload logic using Java and AWS Lambda, which boosted request processing time.
- **AWS Infrastructure Enhancement:** Implemented AWS Fargate services and optimized Lambda functions, resulting in improved processing speed and more efficient resource utilization.
- **Caching and Configuration:** Introduced ConnectorConfigurationCache to the service to reduce the processing time and updated the AWS ECS with SuperStar to enhance monitoring and maintainability.
- **CI/CD Pipeline Development:** Created a robust CI/CD pipeline with Hydra workflows and integrated with AWS CDK, helped faster deployment process.
- **Data Handling:** Implemented a safe rollout feature All the requests by capturing all processed data in service database using DynamoDB which helps in redrive request with faster process time.
- **Multithreading:** Used SQS to distribute tasks to multiple worker threads running as separate Lambda functions helped in processing messages in parallel and increased time by 500 milliseconds.
- **Integration Testing:** Added integration tests for existing and new services using cucumber and Hydra tests, which improved test coverage by 20% and the reliability of deployments.

PSXTOpsReport:

- **Report Automation:** Designed OncallHandoff report interface and automated tracking of incoming tickets and SLA breaches using Python to reducing the manual efforts and increase accuracy.
- **Enhanced Reporting Features:** Introduced new sections for risk management, ticket analysis, and oncall responsibilities using XWiki to improve team's ability to manage the operational issues.
- **Code Refactoring:** Updated the report generation code to reduce dependencies using python and AWS S3 to store the data, allowing easy report creation and increasing overall system flexibility.
- **Performance Validation:** Scheduled meetings to understand the unwanted developer efforts spent and updated automation to help the team to reduce the manual efforts by 50%.

- **Operations and Excellence in Engineering**
 - **Issue Resolution:** Proactively addressed RDE problems in the connector fleet service, assisting remote teams during testing and increasing practical RDE and AWS CLI usage in team.
 - **Security Certification:** By concentrating on recognizing and resolving security threats, we were able to obtain Anvil certification and greatly improve the security of the new designs provided.
 - **Upgrades and Client Support:** Helped clients upgrade to new WeblaballocationProvider versions, handled conflicts, and made sure the transfer went smoothly. Provided continues support to clients by updating wikis and SOP's after upgrade for quick guidance.
 - **Hackathon Success:** Gained a deeper understanding of several architectural concepts like AWS CloudFormation, Elastic Load Balancing, SQS, EventBridge and SNS and also won the Hackathon.
 - **Leadership:** Demonstrated excellent leadership by handling deployments, resolving customer concerns, and assisting team members in accomplishing project objectives.

Part-Time Graduate Assistant

Texas Tech University, TX (August 2021 – March 2022)

- **University Website Management:**
 - **Technical Support:** Assisted with installing, updating, and troubleshooting computer hardware and software for MAC, windows and Linux Systems, leading to improved system performance.
 - **Web Development:** Developed and maintained web pages for issue tracking using Angular and C#, which increased the functionality of the university's website tools and better user experience.
 - **Database Management:** Performed regular maintenance on databases, optimized queries, and ensured data integrity, to increasing the reliability of university's data management systems.

Full-Stack Engineer

Mindtree, Bangalore, India (October 2019 – January 2021)

- **Unilever UNIFY:**
 - **SIM Management Interface Development:** Designed and built a SIM management interface for GULF region using C# with repository design pattern, making administrative tasks easier.
 - **Quality Management Interface:** Created quality management interfaces for multiple regions using Angular, leading to optimized data processing and faster page load times.
 - **Database Management:** Created robust stored procedures having custom error handling for all transactions, rollbacks to recent commits and save points using SQL Server.
 - **Component Reusability:** Developed reusable TypeScript components and services, which improved code maintainability and the development of several features.
- **Trip Advisor Web Application:**
 - **UI Development:** Developed fast and responsive Web Application in ASP.NET MVC for master layout page, customer registration/login webpage and processed data with SQL server.
 - **Authentication:** Managed authentication for all requests from Angular to ASP.NET Core with token-based authentication features using JWT.
 - **Data Processing:** Used LINQ and ORM tools like Entity Framework Code First Migrations to exchange data between web applications and database objects in a relatively easy way.
 - **Discount Automation:** Designed an automated system to apply discount coupons for region specific modules using C# and Typescript, boosting customer engagement and increasing sales.

Software Engineer

Elite Career Hub, Tirupati, India (May 2019 – September 2019)

- **PeopleSoft HRIS Application:**
 - **UI and Backend Development:** Developed user interfaces and backend features for employee registration with Angular and ASP.NET Web API, making HR processes efficient and accurate.
 - **Code Quality and Standards:** Improved the overall quality of code by implementing unit tests using MSTest and regular code reviews, leading to more reliable and easier-to-maintain software.

Projects

Ecommerce Website

- **Comprehensive Development:** Designed and implemented user interfaces for admin, customer, and seller pages using Angular, and handled server-side actions with ASP.NET Core.
- **Game Integration:** Added interactive games to the website using Typescript and C#, which helped boost user engagement and extended the time users spent on the site by 30%.
- **Cross-Device Optimization:** Made sure the website functioned smoothly across different devices and browsers using bootstrap, ensuring a consistent user experience in all devices.

Certifications

- **Cloud Computing & Virtualization Specialist:** Expertise in Open Stack Private Cloud configuration and administration, cloud security and management, cloud backup, and disaster recovery procedures. Deep understanding of virtualization and cloud computing technologies.
- **Anvil Certification:** Expertise in identifying and mitigating security threats and factors and completed within 25days.

Education

Master of Science in Computer and Information Sciences
Texas Tech University, Lubbock, TX
 (January 2021 – May 2022)
 GPA - 3.5

Bachelor of Technology in Computer Science and Engineering
Hindustan University, Chennai, Tamil Nadu, India
 (July 2015 – April 2019)
 CGPA - 8.58
