

Hira Thagunna

 (469) 747-0034

JAVA Developer

 thagunnahira03@gmail.com

 Euless, TX 76040

SUMMARY

- Highly trusted and motivated IT professional with 5+ years of experience in system analysis, design, development, testing, implementation, and support of enterprise applications using Java/J2EE technologies.
- Expertise in designing, developing, and deploying microservices-based applications using Spring Boot, Spring Webflux, Java, Kotlin, Docker, and Kubernetes.
- Proficient in Core Java, J2EE, JSP, Servlets, Java Beans, EJB, JSF, Spring, Spring Boot, Hibernate, and Web Services (REST & SOAP).
- Skilled in developing RESTful APIs with Spring Boot, JAX-RS, Apache CXF, and Jersey, as well as SOAP web services using WSDL, SOAP, JAXB, and JAX-WS.
- Extensive experience in MVC frameworks like Spring MVC and Struts, with a deep understanding of Spring IoC, Spring Security, Spring AOP, Spring JDBC, and Spring Boot with JPA for ORM.
- Hands-on experience in front-end technologies like HTML, XHTML, HTML5, CSS, DHTML, JavaScript, jQuery, AJAX, AngularJS/2/4, Bootstrap, and XSLT.
- Well-versed in configuring and deploying JavaEE applications using web servers like Apache Tomcat (5.x/6.x/7.x/8.x) and application servers like IBM WebSphere, JBoss, and WebLogic 11g.
- Expertise in working with relational databases such as Oracle, PostgreSQL, MySQL, and SQL Server, with strong skills in PL/SQL and database optimization.
- Experience with NoSQL databases like MongoDB and implementing high-performance data access layers.
- Knowledge of SSO (Single Sign-On), OAuth, and Keycloak for authentication and security in enterprise applications.
- Strong experience in Agile development methodologies, running Scrum meetings, and managing sprints for service projects.
- Skilled in CI/CD pipelines using Jenkins, TeamCity, and SonarQube, with expertise in build automation using Maven and Ant.
- Experience in version control systems like Git and SVN, ensuring efficient code collaboration and version management.
- Hands-on experience with AWS cloud services, including EC2, S3, SQS, DynamoDB, RDS, ElastiCache, and Redshift.

TECHNICAL SKILLS

Enterprise Technologies: Java 17, Kotlin, Python, J2EE, EJB, SOAP and RESTful web services

Web Technologies: HTML/HTML5, CSS3, CSS, XML, XSLT, JavaScript, AJAX, JQuery, JSON

Database: Firebase, Oracle, MySQL, SQL server Microservices, Client server model, Service Oriented Architecture (SOA)

IDE & Tools: Eclipse Oxygen, Visual Studio, Notepad++, Sublime, Atom

Software Methodologies: Agile, Waterfall, Test Driven Development, Model Driven Development

Version Control: SVN, GitHub

Operating Systems: Windows XP, Windows 7, Windows 10, Linux

Servers: Apache Tomcat, IIS, WAS 8, WebLogic, Glassfish

Cloud Components: AWS EC2, Microsoft Azure, Google Compute Engine

Other Tools & Technologies: Jira, PowerShell, Unity, Jenkins, Maven, Bamboo

PROFESSIONAL EXPERIENCE

Java Developer | Duration Jan 2024-Current

Liberty Saving Bank - St Cloud, MN.

Responsibilities:

- Expertise in Kotlin, Spring Boot, Spring WebFlux, Microservices, Docker, and Kubernetes, ensuring scalable and efficient backend development.
- Implemented applications using Spring Boot with JPA, Spring Framework, Spring Dependency Injection, and Spring MVC for developing REST APIs, integrating seamlessly with Hibernate.
- Used Hibernate for data persistence, maintaining and configuring all Hibernate POJOs using annotations for database mapping.
- Developed the front-end UI using Angular 4, Bootstrap, JavaScript, jQuery, HTML5, and CSS3, ensuring a responsive and user-friendly experience.
- Designed and created database tables using PostgreSQL, ensuring efficient schema design for optimal performance.
- Experienced with Coding, Testing, Performance tuning, Auditing code and Documentation, Implement and maintenance for Azure DevOps (CI/CD) pipelines.
- Implemented Continuous Integration (CI) pipelines using Jenkins, including Blue Ocean Pipeline for automating project builds and deployments.
- Used Hibernate and HQL to efficiently store and retrieve persistence data from the PostgreSQL database.
- Deployed applications using Docker Containers, ensuring portability and consistency across environments.
- Managed and orchestrated containerized applications using Kubernetes, improving scalability and fault tolerance.
- Executed the automation from commit to deployment directly into Azure VM by implementing a CI/CD pipeline with the help of Azure Devops and Chef. Setting up Chef Infra, bootstrapping nodes, creating and uploading recipes, node convergence in Chef SCM.
- Used Azure Kubernetes service to deploy a managed Kubernetes cluster in Azure and created an AKS cluster in the Azure portal, with the Azure CLI, also used template driven deployment options such as Resource Manager templates and Terraform.
- Developed and maintained event-driven microservices architecture using Spring Boot and Spring WebFlux.
- Performed unit testing and debugging using JUnit, ensuring reliability and robustness of the application.
- Used SVN, Git, and Bitbucket for version control, ensuring seamless collaboration and code management.
- Developed applications using JHipster framework, leveraging its built-in capabilities for rapid development.
- Implemented RESTful web services, enabling seamless communication between distributed services.
- Used Azure Kubernetes service to deploy a managed Kubernetes cluster in Azure and created an AKS cluster in the Azure portal, with the Azure CLI, also used template driven deployment options such as Resource Manager templates and Terraform.
- Used JIRA for tracking user stories, bugs, and sprint progress, ensuring efficient workflow management.
- Successfully implemented and configured JHipster projects, leveraging Spring Boot for backend development.
- Used Atlassian products like JIRA, Bitbucket, and Confluence for issue tracking, release management, code reviews, and documentation.

Environment: Java, Kotlin, Spring Boot, Spring WebFlux, Hibernate, PostgreSQL, Liquibase, Angular 4, Bootstrap, Docker, Kubernetes, JHipster, Jenkins, Ansible, IntelliJ IDEA, Bitbucket, SVN, Git, JUnit, JIRA, Confluence, Tomcat.

Java Developer | Sep 2022 to Dec 2023

Banner HealthCare – Phoenix, AZ

Responsibilities:

- Designed and developed microservices architecture using Spring Boot 3.0, Spring Cloud, and Reactive Java, with Kafka for asynchronous inter-service communication.
- Built and managed Java microservices within Kubernetes, optimizing deployment, scaling, and orchestration.
- Developed RESTful APIs and integrated front-end applications using Angular and React, improving UI responsiveness.
- Worked with AWS services like AWS Lambda, S3, DynamoDB, and RDS, ensuring scalable cloud-based solutions.
- Created test suites for each service using Azure end-points in Ready API to test the services created in Azure APIM.
- Implemented CI/CD pipelines using AWS CodePipeline, CodeBuild, and CodeDeploy, automating deployment processes.
- Utilized Docker and Kubernetes for containerized deployments, ensuring scalability and maintainability.
- Developed and optimized multithreaded Java applications, ensuring concurrency and performance efficiency.
- Integrated and managed databases like PostgreSQL, MySQL, and Oracle, using Hibernate and JPA for persistence.
- Used Azure Cosmos DB database for Create, Read, Update and Delete (CRUD) operations.
- Applied OOP principles to design modular, maintainable, and scalable software solutions.
- Ensured PCI compliance and implemented security best practices in application development.
- Used Atlassian products like Jira, BitBucket and Confluence for issue tracking, release management and code review and Documentation.
- Used Git, GitHub, and Jenkins for version control and CI/CD, enabling efficient collaboration and automated deployments.

Environment: Java, Spring Boot 3.0, Spring Cloud, Kafka, Angular, React, AWS (Lambda, S3, DynamoDB, RDS, CodePipeline, CodeDeploy), Docker, Kubernetes, PostgreSQL, MySQL, Oracle, Hibernate, JPA, Jenkins, Git, GitHub, Bitbucket, Confluence, IntelliJ IDEA.

Jr Java Developer | June 2020 to Aug 2022

Home Depot - Atlanta, GA

Responsibilities:

- Developed and managed the server-side using Java and Spring Web MVC, implementing RESTful APIs with Spring Boot.
- Designed and implemented back-end applications using REST controllers, ensuring efficient data processing and client interactions.
- Followed Test-Driven Development (TDD), testing applications using JUnit, Mockito, and Cucumber for end-to-end (E2E) testing.
- Integrated AWS services for binary file uploads, leveraging HTML5, JavaScript, and REST APIs.
- Persisted data using AWS RDS (MariaDB), following Oracle SQL syntax, and ensured data integrity.
- Protected API endpoints with JSON Web Tokens (JWT) for secure authentication and authorization.
- Implemented CI/CD pipelines using Jenkins, following best DevOps practices for automated deployment.
- Deployed backend services to Tomcat servers on AWS EC2, enabling external API access.
- Used Azure Resource Manager (ARM) to deploy, update, or delete all the resources for your solution in a single, coordinated operation.
- Collaborated with teams using Git and GitLab, ensuring efficient version control and code reviews.
- Hosted front-end applications in AWS S3 for public accessibility and scalability.
- Designed and developed business components, integrating them seamlessly with Spring Framework.
- Managed MVC architecture, implementing J2EE design patterns like Session Facade, Factory, DAO, and DTO.
- Built microservices using Spring Boot and Web Services (SOAP, WSDL, XML) for seamless communication.
- Configured and deployed applications on WebSphere Application Server for reliable hosting and scalability.

Environment: Java, Spring MVC, Spring Boot, JUnit, Mockito, Cucumber, AWS (RDS, EC2, S3), Tomcat, WebSphere, Git, GitLab, Jenkins, HTML5, CSS3, JavaScript, jQuery, Bootstrap, SOAP, REST, Hibernate, Oracle, IntelliJ IDEA.
