Hartford, CT | Phone: +1-959-333-9998 | Email: codehk54@gmail.com | LinkedIn: [linkedin.com/in/bollepalli-hritvik-652169171/](https://www.linkedin.com/in/bollepalli-hritvik-652169171/)

Professional Summary

Highly experienced Data Analyst with over 5 years of expertise in the IT and healthcare sectors, specializing in financial underwriting, PBM client support, and cost-assumption forecasting. Expert in leveraging SQL, Python, and Power BI to analyze clinical trends, reconcile rebate payments, and ensure 100% compliance with pricing and performance guarantees. Proven track record of managing complex RFPs and renewals by developing automated pricing models that identify risks and opportunities for prospective clients. A detail-oriented professional with a strong foundation in HIPAA-compliant data management and a commitment to driving continuous process improvement through advanced predictive modeling and stakeholder collaboration. Currently preparing for CFA Level 1 and post completion of CFA, I plan to complete FRM & CAIA certifications to deepen expertise in portfolio analysis and risk modeling.

Experience

Western & Southern Financial Group — Data Analyst (Finance & Insurance)

Ohio, USA | Sept 2023 – Present

- **Built automated SQL pipelines in Snowflake** to reconcile transaction data across 3 regions, reducing fraud detection lag by 28%.
- **Developed a customer outreach close-rate model using Python and AWS SageMaker**, increasing conversion efficiency by 18% through optimized lead engagement strategies.
- **Engineered LLM-based transcript analysis tools using LangChain and FastAPI** to derive actionable insights from service calls, reducing manual review time by 50%.
- **Executed rigorous A/B tests on underwriting models** to validate performance improvements, resulting in a 15% increase in predictive accuracy for risk assessment.
- **Designed real-time payment monitoring dashboards in Tableau** to investigate business questions and analyze ML system health, improving executive decision speed by 35%.
- **Automated operational workflows through production-level Python code**, eliminating manual pain points and saving 20+ hours of team labor per week.
- **Collaborated with senior engineering teams via Git and Jira** to share ownership of production workflows and ensure 100% uptime for AI-driven systems.
- **Maintained high-quality datasets for analysis using dbt to clean and structure data**, ensuring 100% data consistency across the organization.
- **Optimized Snowflake credit usage by refactoring inefficient SQL queries and dbt models**, resulting in a 20% reduction in monthly cloud data warehousing costs while maintaining high-speed reporting delivery.
- **Orchestrated automated file exports and email notification workflows**, ensuring that critical underwriting and compliance alerts were delivered with 99.9% reliability to executive decision-makers.
- Optimized existing data manipulation scripts in Python to automate the reconciliation of financial logs, enhancing reporting speed and usability by 30%.
- Served as the primary liaison between the technical data team and business operations, translating complex database issues into actionable business insights for stakeholders.

L Brands — Data Analyst (Retail)

Columbus, Ohio | Jan 2023 – Aug 2023

- **Fine-tuned product demand forecasting models using Python (Scikit-learn)**, reducing stockout events by 22% through improved consumer behavior analysis.
- **Developed dynamic pricing algorithms in SQL and R** that adjusted SKU prices based on real-time competitor data and consumer purchasing trends, increasing gross margin by 12%.
- **Engineered product performance dashboards in Power BI using DAX** to track 1M+ SKUs, improving executive visibility into underperforming categories by 30%.
- **Conducted customer segmentation analysis using K-means clustering in Python**, boosting personalized campaign ROI by 14% through targeted promotional strategies.
- **Built and automated price elasticity models in Snowflake**, identifying key price thresholds that maximized revenue for high-volume seasonal product lines.
- **Executed A/B tests on various pricing strategies**, validating a 5% uplift in same-store revenue for promoted retail categories.
- **Automated complex ETL workflows using Python and Airflow**, saving approximately 300 analyst-hours annually and improving data reliability for the pricing team.
- **Collaborated with merchandising and supply chain teams to model promotional scenarios**, forecasting margin impact under multiple demand assumptions with 95% accuracy.
- Optimized existing data manipulation scripts to automate the reconciliation of financial logs, enhancing reporting speed and usability by 30%.

- Conducted ad-hoc analysis to assess the revenue impact of operational process changes, presenting measurable metrics to senior management to validate strategy.
- Managed data stewardship tasks, regularly auditing system records to maintain hygiene and support targeted marketing and operational campaigns.

Sanofi — Data Analyst (Data Science & Health Compliance)

Hyderabad, India | Mar 2021 – July 2022

- **Integrated EMR/EHR data using Python and Azure Data Factory**, ensuring HIPAA compliance while enabling 15% faster patient analytics reporting.
- **Automated claims validation in SQL and Power BI**, cutting manual audit time by 40% and improving billing accuracy by 16%.
- **Developed predictive models in R to forecast patient volume**, improving resource allocation and decreasing operational costs by 15%.
- **Designed interactive Tableau dashboards to track treatment adherence and adverse events**, reducing manual reporting time by 45% for medical affairs.
- **Cleaned and integrated pharmacovigilance datasets of 250k+ records** to produce cohort analyses used by clinical research teams.
- **Built risk stratification models for chronic disease management programs**, improving targeted intervention reach for 250,000+ patients by 38%.
- **Optimized SQL queries for healthcare reporting, reducing average runtime by 70%** through advanced indexing and query refactoring.
- **Presented complex data findings to cross-functional clinical teams**, translating technical insights into actionable strategies that improved follow-up compliance by 7%.
- Investigated complex business problems through independent research, delivering insight to action recommendations that saved \$500k in projected costs.
- Spearheaded the migration of legacy SAS analytics workflows to scalable Python and Snowflake environments, enhancing data processing speeds by 35% and retiring an expensive, outdated platform.

Technical Skills

Collaboration: Cross-functional Team Leadership, Project Management, Agile/Scrum, Jira.

Querying & Warehousing: SQL (Advanced - CTEs, Window Functions), Snowflake, Google BigQuery , Azure

Data Integration: Salesforce, Marketo, Snowplow (Event Data), dbt (basic).

Programming & AI: Python (Pandas , Scikit Learn), R , SAS , GenAI Prompting (ChatGPT/CoPilot for SQL optimization).

Cloud Platforms: AWS (S3, Glue, Sage Maker), Azure (ADF), GCP (BigQuery)

Collaboration & Security: Git, GitHub, Jira, Confluence, HIPAA, PCI DSS

Core Competencies: Data Modeling, Requirement Gathering, Stakeholder Management

AI Skills: Prompt Engineering, AI Agents

Professional Development: CFA Level 1 Candidate

Education

Masters Degree in Business Analytics and Project Management, University of Connecticut.

Certifications

- Google Data Analytics
- Tableau Desktop Specialist
- Microsoft Power BI Data Analyst
