

Ian Dalrymple

Objective: Obtain a full-time position as a software engineer (remote or warm climate).

Certifications:

ASQ's Certified Six Sigma Black Belt (Certification: 11123)
ASQ's Certified Quality Engineer (Certification: 59820)
ASQ's Certified Reliability Engineer (Certification: 8127)

Experience:

	Rockwell Automation	Remote
Jun. 23-Present	Software Engineer • Backend C# development using Visual Studio (.NET6, .NET7 and .NET8). • Limited C++ 20 development within mature code base. • Limited Javascript front end development. • GitLab CI/CD pipeline creation for DOTNET applications. • gRPC client and server development for microservice application communication. • GraphQL client development. • Interaction/ invocation of unmanaged DLL's via C# managed code. • Library creation in C# with XUNIT testing suite. • Obfuscation of desktop and console DOTNET applications. • Containerization of C# AOT applications with Docker and Podman. • Created WinForms application automating configuration of Docker and Podman containers by interacting with container execution engine API. Downloaded associated images using Azure Container registry API.	
	Stryker Instruments	Kalamazoo, MI
Nov. 17-May 23	R&D Embedded SW Engineer • Acted as software lead on launch of next generation heavy-duty power tools suite. The heavy-duty power tools are a cornerstone product line for the company. • Developed time-sliced NFC solution to reduce electromagnetic emissions. Without this implementation the product line would have failed emissions testing and could not have been released. • Medical device embedded SW development in C/C++ on STM chipsets (bare metal and RTOS). • Create testing tools automating measurement system(s) and DUT(s) (Visual Studio / C# / WPF / Caliburn Micro / DRY). • Multiple actor communication protocol architecture and implementation among embedded devices and PC applications (UART and / or I²C). • Core clock, auxiliary timer, ADC, DAC, UART, I²C and RTC initial configuration. • Bug tracking and sprint task tracking using Jira. • Revision control with Git using SourceTree UI front end.	
	Stryker Instruments	Kalamazoo, MI
Sept. 16-Nov. 17	Advanced Service Engineer • Surgical cutting device testing system development for repair center (VB.NET) utilizing SOLID design principles. • Partial repairs manual pressing strategy development and deployment. • Full box build test system development for repair center (VB.NET). System communicates with UUT, DMM's, power supplies, electronic loads and other ancillary equipment to drive test sequence. Equipment prevented spend of \$10+ million on full production test systems.	

Ian Dalrymple

	Stryker Instruments	Kalamazoo, MI
Jun. 09-Aug. 16	Advanced Manufacturing Engineer • Interference press fit process development. • Development and qualification of air eliminating grease dispensing system. • Determination of manufacturing line layout and procurement of associated equipment. • Architecture of SCADA implementation project - the system forces the prescribed sequencing of standard work operations, archives all process data and creates an electronic device history record. • Statistical process development. • Assist with SQL database development, architecture / schema.	
	Mattang	Remote
Dec.21-Apr. 22	Integration Engineer • Integrate various business systems with master data management platform using APIs with various forms of authentication (OAUTH, basic, keys). • All integrations created in C#. • Deployment of integrations to Docker container running inside a Kubernetes cluster.	
	Erma's Original Frozen Custard	Remote
Jan. 05-Present	Owner / Data Scientist / Data Engineer / IT Application Developer • Developed sales forecast models with SciKit-Learn (GBR, RFR, Neural Network, Linear Regression, SVR) and serves up resulting predictions in .NET CORE web application. The user inputs date and store on web UI and back-end Python engine acquires necessary data from SQL server, unpickles pipeline / model and sends prediction back to the web application. ○ Developed C# tool to automatically acquire sales data from POS vendor API's with results stored in normalized MSSQL server database. ○ Developed C# tool to automatically acquire weather data from Open Weather Map with results stored in normalized MSSQL server database. ○ Built full ETL pipeline resulting in final ML models for consumption by prediction tool. • Implemented Azure Functions for POS and weather API data collection and storage in Azure cloud SQL database. • Data visualizations using Qlik and PowerBI supplied by fully automated pipeline. • General data mining using Jupyter Notebooks in Visual Studio Code. • Developed VB.NET register reconciliation web site with backend MSSQL server storage.	

Education:

Eastern University Master of Science, Data Science Cumulative GPA: 4.0/4.0	Online
Oregon State University Bachelor of Science, Computer Science Cumulative GPA: 4.0/4.0	Online
Pennsylvania State University Master of Applied Statistics Cumulative GPA: 4.0/4.0	World Campus
University of Michigan Bachelor of Science and Engineering, ChE Cumulative GPA: 3.76/4.0	Ann Arbor, MI
