Data Analyst

PROFESSIONAL SUMMARY:

- Over 6+ years of industry experience as a Data Analyst with solid understanding of Data Modeling, Evaluating Data Sources, and strong understanding of Data Warehouse concepts, ETL, BI, Data visualization, Client/Server applications.
- Excellent in Data Analysis, Data Profiling, Data Validation, Data Cleansing, Data Verification, and Data Mismatch Identification.
- Experience in different Project Management Methodologies like Traditional waterfall and Agile.
- Very good experience and knowledge on Amazon Redshift, and AWS.
- Experience in designing Star Schema, Snowflake schema for Data Warehouse, by using tools like Power Designer.
- Comprehensive knowledge and experience in process improvement, normalization/de-normalization, data extraction, data cleansing, data manipulation.
- Extensive experience in development of T-SQL, DML, DDL, DTS, Stored Procedures, Triggers, Sequences, Functions and Packages.
- Experience in extracting, transforming and loading (ETL) data from spreadsheets, database tables and other sources using Microsoft SSIS.
- Experience in Data Transformation and Data Mapping from source to target database schemas and also data cleansing.
- Strong understanding of Data Modeling (Relational, dimensional, Data analysis, implementations of Data warehousing using Windows.
- Expertise in creating different visualizations like Bar charts, Line charts, Pie charts, Donut charts, Maps, Tree Maps, Heat maps, Scatter plots, Area Charts, Gantts, Bubbles, Histograms, Bullets and combination charts.
- Extensive experience in Data Blending in Tableau. Worked on queries related to creating complex visualization and Custom SQL.
- Experience in automating the data extraction and transformation process using Tableau Prep.
- (Batch Processing, Online Processing), ETL, Data warehousing, Data mining, DBMS and Data Modeling
- Published reports-based Power BI services (Pro) and schedule subscription and various sharing options (workspace, content pack, and Apps).
- Good Knowledge in AWS concepts and Amazon Redshift tools.
- Expertise in DAX & MDX Languages which helps in understanding and analyzing the data.
- Excellent knowledge on Informatica platform as a whole and the integration among different Informatica components and services.
- Having Good Knowledge in Azure Cloud
- Used Tableau Desktop Data Visualization tool for reports, integrated tableau with Alteryx for Data & Analytics.
- Extensive experience in Power BI includes importing, shaping, and transforming data, visualizing data, authoring reports, scheduling automated refreshes, and creating and sharing dashboards based on reports in Power BI desktop and embedded Power BI reports into SharePoint Sites and configured.
- Implementing fully managed data warehouse service to analyze large scale data using SQL queries through AWS (Amazon Redshift).
- Extensive experience in Software Development Life Cycle (SDLC) including System Analysis, Reporting, Data Modelling, Data Analysis and Business Analysis.
- Effective communication skills, capable of conveying complex findings to diverse audiences in a clear and understandable manner, making me a collaborative team player.
- Experience in Error handling and debugging coding issues and troubleshooting production problems.
- Ability to quickly grasp any new technologies and concepts.
- Skilled in Python for data manipulation using pandas, numpy; data visualization using matplotlib and seaborn; and automation of ETL workflows.
- Applied Python for building simple machine learning models (classification, clustering) and automating reporting task

- Experienced in R for statistical analysis, data modeling, ANOVA, hypothesis testing, and visualizations using ggplot2 and tidyverse.
- Integrated Python and R scripts into Tableau and Power BI for advanced analytics workflows.

CERTIFICATIONS:

- Certified Tableau Developer
 - Certified Power BI Developer
 - Certified AWS Developer
-

TECHNICAL SKILLS:

BI Reporting Tools: Tableau Desktop (10.x, 20.x), Tableau Prep, Tableau Server, Power BI, MS-Power Point, MS-Excel

Databases: SQL Server, MySQL, Greenplum, Oracle, DB2

Database Languages: MS SQL Server, Oracle, PostgreSQL

Web Technologies: HTML, CSS, jQuery, AJAX, JSON, JavaScript

Cloud Data Systems: AWS, Amazon RedShift, API Gateway, Azure

Programming Languages: C#, Python and R

ETL: Alteryx, Talend, Informatica, Excel

Project Management Tools: JIRA, Version One

Version Control Tools: Git, GitHub, Jira

Software Methodologies: Agile, Scrum

Operating System: Windows

IDE's: Visual Studio

PROFESSIONAL EXPERIENCE:

Client: UPS (United Parcel Services), Atlanta, GA, USA

Role: Data Analyst 2

April 2023 - Present

Project 2: Delivery Exception Monitoring & Outreach Analytics

May 2024 – Present

Client: UPS Co.

Data Analyst

Description: Developed a dashboard to identify and prioritize packages or delivery zones with unresolved delivery exceptions and ensure timely outreach or resolution by operational teams.

- Tracked recurring delivery exceptions (e.g., undelivered, missed scans) occurring consecutively or non-consecutively over the past 12 months.
- Enhanced backend queries to include new exception types and resolution statuses as per business updates. Progress toward contacting these members by PCM (Personal Care Manager).
- Enabled prioritization of delivery zones based on frequency of issues and business impact for proactive outreach..
- Ensure that the dashboard includes both real-time and historical data (e.g., for the last 12 months) to track trends in non-completion and outreach efforts.
- Integrated both historical and real-time data to analyze long-term exception trends and current status.

- Automated the data preparation pipeline with Alteryx to regularly update the dashboard with new member data, ensuring seamless integration of incoming information and reducing the need for manual intervention.
- Combining different sources of data in Tableau Prep and generating the data into excels.
- Sending the excel data to the business users to validate.
- Developed a query to identify the consecutive months of the members who have not reached continuously for last 12 months.
- Manually/Scheduling the Prep flows to monitor the counts of the Assessments/Tasks in the Tableau server and in the Tableau Desktop.
- Built end-to-end ETL workflows using Alteryx to transform and clean shipment and delivery data pulled from multiple AWS S3 sources.
- Creating the jobs in SQL server to run the queries and generating the data into excel.
- Refreshing the dashboard data after every successful run of the Tableau Prep flows and SQL server jobs.
- Wrote advanced SQL queries to analyze millions of package tracking records stored in Amazon Redshift for exception analysis and delay categorization.
- Automated ETL pipeline using Alteryx to pull and clean delivery exception data from multiple systems.
- Created the wiki page and provided the link within the dashboard to guide the users.
- Merged and transformed data in Tableau Prep and output summaries to Excel for operational team validation.
- Built SQL queries to identify recurring exceptions and exceptions aging over SLA thresholds.
- Scheduled Tableau Prep flows and SQL jobs to keep dashboard data up-to-date without manual intervention.
- Created exception heat maps and trend visuals in Tableau using Level of Detail (LOD) calculations and dynamic filters.
- Published dashboards on Tableau Server with scheduled refreshes and user-specific access.
- Created internal wiki documentation and embedded links in dashboards for stakeholder guidance and training.

Environment: Tableau Desktop, Tableau Server, Tableau Prep, Alteryx, SQL Server, PostgreSQL

Project 1: Daily Delivery Exception Tracker

April 2023 – May 2024

Client: UPS Co.

Data Analyst

Description: Developed a real-time dashboard aimed at reducing unresolved delivery exceptions to zero by end-of-month, allowing the operations team to proactively identify and resolve failed or delayed shipments.

- Generated delivery exception data from the start of the current month to present, focusing on undelivered or failed delivery attempts.
- Monitored package counts, exception types (e.g., missed scans, failed deliveries), and current resolution statuses. Tracking the number of outreach attempts per day by PCM and compare it to daily targets. Create visualizations to highlight outreach progress and gaps.
- Tracked daily outreach attempts by operations teams to address exceptions, measuring progress against daily resolution targets.urgent cases, highest risk levels).
- Debugged and optimized queries to resolve issues related to missing or delayed data ingestion.
- Scheduled and monitored Tableau Prep flows to ensure consistent refreshes of key metrics on Tableau Server and Desktop.
- Automated daily and weekly refreshes of dashboards by scheduling Tableau Prep flows integrated with Redshift and SQL Server jobs.
- Employed Alteryx for ETL workflows: extracting scan data, transforming delivery logs, and loading into the data warehouse for reporting.
- Built visual indicators (progress bars, gauges) to show progress toward the monthly goal of zero unresolved exceptions. Addition of new assessments/tasks to the backend query.
- Configured real-time alerts in Tableau to notify teams when delivery backlogs or exception rates exceed thresholds. Combining different sources of data in Tableau Prep and generating the data into excels.
- Manually scheduling the Prep flows to monitor the counts of the Assessments/Tasks in the Tableau server and in the Tableau Desktop.
- Created user documentation and a linked internal wiki page within the dashboard to guide stakeholders on usage and metrics.
- Used ETL (Alteryx) process to Extract, Transform and Load the data into stage area and data warehouse.

Provided insights to logistics managers on outreach efficiency, highlighted bottlenecks, and recommended operational improvements.

Environment: Tableau Desktop, Tableau Server, Tableau Prep, Alteryx, SQL Server, PostgreSQL

Company: Olive idea lab-Hyderabad, INDIA

Duration: Jan 2022 – Jan 2023

Project 2: Star Dashboard

Jan 2022 - Jan 2023

Client: SG Analytics

Data Analyst Description: To develop KPI metrics, assessments, risk factor tracking, and case management dashboards for the banking sector, supporting end clients of SG Analytics across multiple locations.

- Worked with business and risk teams to define and track KPIs around assessments, risk factors, fraud cases, and compliance issues.
- Creating the clear and impactful stories around the bank's risk exposure, case management outcomes, and assessment results, tailored for different stakeholders.
- Supporting the development of dashboards for tracking cases, such as fraud detection, KYC (Know Your Customer) compliance cases, and suspicious transaction alerts.
- Developed scheduled reports for regular assessments, reducing manual work for recurring analysis.
- Followed banking security protocols, ensuring that sensitive data is securely managed within Tableau and SQL.
- Managed user roles and permissions in Tableau to control access to sensitive information, especially for risk and case-related data.
- Monitored and improve dashboard performance to ensure efficient loading times, especially for high-data-volume use cases.

Environment: Tableau Desktop, Tableau Server, CEDAR

Project 1: Engineering Analytics Dashboard Migration

Jan 2021 - Dec 2021

Client: Cyient Ltd.

Data Analyst

Description: Worked on replicating and modernizing legacy IQ4BIS dashboards into Tableau across multiple business domains including Sourcing, Engineering, Finance, Services, and Inventory. Supported performance optimization, data validation, and dashboard automation for Cyient's internal teams and end clients..

- Converted legacy IQ4BIS RDL files into database-specific queries (Oracle/Greenplum) for Tableau compatibility. Working on query part in case of any data issues while doing the unit testing with Oracle data.
- Debugged and enhanced SQL queries to address data mismatches and unit test issues. Passing parameters to the Custom SQL part at Tableau end in live connection, to get data within least possible time when volume of data is huge.
- Improved performance of data by writing SQL queries that involved JOINS, Windows Functions, SQL Aggregate functions, DATE Functions, etc.
- Rebuilt over 50 complex reports in Tableau Desktop using live data connections and custom SQL.
- Experience with writing scripts in SQL Server to extract data for reporting and analysis.
- Improved dashboard performance by optimizing joins, window functions, and date filters. Performed Data mapping between source systems to Target systems, logical data modelling, created class diagrams and ER diagrams and used SQL queries to filter data.
- Managed workbook scheduling and user access control on Tableau Server.
- Integrated parameter-driven filtering and URL-passing to enable drill-through navigation between dashboards.
- Improved dashboard performance by optimizing joins, window functions, and date filters.
- Performed data mapping, created class diagrams, ER models, and logical mappings across systems. Publishing and scheduling the workbooks on server.

- Participated in requirements gathering, business documentation, and stakeholder sign-off.
- Analyzed the historical documentation, supporting documentation, screen prints, e-mail conversations, presented business and wrote the business requirements document and got it electronically signed off from the stake holder.

Environment: Tableau Desktop, Tableau Server, Talend, Greenplum, Oracle.

**Company : KTC Logistics Hyderabad,
INDIA**

Duration : Jan 2021 - Jan 2022

- Analyzed end-to-end business processes across tech, logistics, and customer service functions to identify bottlenecks, reduce redundancy, and improve workflow efficiency.
- Created detailed process maps using Lucidchart/Visio, documenting current-state and designing optimized future-state workflows
- Implemented automation solutions using Power Automate to eliminate manual repetitive tasks, reducing processing time by 25–40%.
- Used Lean and continuous improvement methods to simplify procedures, cut unnecessary steps, and improve team productivity.

Data Analysis & Reporting

- Leveraged Excel (advanced formulas, pivot tables) and Power BI/Tableau to build dashboards that tracked KPIs such as service times, delivery accuracy, and resolution speed.
- Analyzed large datasets using SQL to identify trends, inefficiencies, and performance gaps in operations and customer interactions.
- Provided data-driven recommendations that improved decision-making and operational planning.

Customer Service Process Enhancement

- Reviewed customer service workflows, ticket handling processes, and communication channels to improve response times and customer satisfaction.
 - Standardized support procedures by creating SOPs (Standard Operating Procedures) for handling customer issues, escalations, and workflow coordination.
 - Developed quality-control guidelines to ensure consistency across customer interactions.
-

Logistics & Operations Optimization

- Streamlined logistics workflows by optimizing order handling, shipment scheduling, and inventory movement processes.
 - Identified delays and operational gaps, and implemented corrective steps that increased throughput and reduced processing errors.
 - Coordinated with cross-functional teams to align logistics systems with customer service and technical operations.
-

Project & Change Management

- Collaborated with leadership, tech teams, and operations departments to implement new tools, processes, and systems.
 - Managed small improvement projects from planning to rollout, ensuring smooth adoption and minimal disruption to operations.
 - Trained staff on new workflows, documentation, and operational standards using clear and structured process guides.
-

Technical Tools & Systems

- Experienced in workflow mapping tools (Visio, Lucidchart, Miro)
- Strong Excel, SQL, reporting, and dashboard creation skills
- Knowledge of CRM systems, logistics management systems, helpdesk platforms, and automation tools
- **Ability to translate complex technical processes into clear business solutions**

Environment ; MicrosoftExcel, MicrosoftSheet, DispatchWdf, GoogleDrive, MicfrosoftAccess,

EDUCATION & CERTIFICATIONS:

- Bachelor of Engineering (B.E) from Osmania University (OU) in 2020.
