EDUCATION

Master of Science in Information Systems | Arlington, TX
The University of Texas at Arlington

August 2022 - May 2024
GPA: 3.70/4.00

Bachelor of Engineering in Computer Engineering | Pune, India
Savitribai Phule Pune University

August 2016 - May 2020
GPA: 7.23/10.00

SKILLS

Programming Languages: Python, R, SQL, Bash, VBA, Scala

Python Libraries: NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow, Keras, Neural Network

Databases and Data Warehousing: MongoDB, DynamoDB, Snowflake, Redshift

Data Analysis: Excel, Statistical Analysis, Exploratory Data Analysis

Big Data Technologies: Apache Spark, Amazon EMR, Databricks, Apache Airflow, Apache Kafka, Hadoop

Tools/Services: Alteryx, Salesforce, Tableau, Power BI, Linux/Unix, Jira, Confluence, AWS, Azure, Terraform, GitHub

Certifications: Databricks Lakehouse Fundamentals (March 2024), AWS Certified Cloud Practitioner (July 2023)

EXPERIENCE

Data Analyst / Operation Specialist II
Alcon

August 2024 - Present
Fort Worth, TX

- Implemented a medallion architecture in an AWS Glue ETL pipeline to transform and integrate data from Salesforce and SAP via APIs into Amazon S3 and then to Amazon Redshift, boosting data integration efficiency by 25%.
- Transformed stakeholder data accessibility by designing interactive Amazon QuickSight & Tableau dashboards, visualizing sales, and performance KPIs with scheduled refresh cycles, eliminating 80% of ad-hoc requests.
- Designed and optimized SQL queries for efficient data retrieval, processing over 1 million rows across 5 tables, speeding up data delivery by 40%.
- Improved data pipeline reliability by versioning scripts and schema changes using Git and integrating with AWS Code Pipeline for automated CI/CD deployments, resulting in a 68% reduction in release errors.
- Streamlined data lifecycle documentation for 4 major projects by creating architectural documents and visualizations, enabling non-technical staff to understand complex concepts.
- Collaborated in an Agile environment with cross-functional teams and business stakeholders to gather, refine, and implement critical requirements, ensuring faster delivery cycles and improved alignment between engineering and business units.

Graduate Research Assistant – Data Engineer
The University of Texas at Arlington

June 2023 - May 2024
Arlington, TX

- Processed and cleaned enrollment and retention records using Python, achieving a 53% reduction in data errors, and ensuring reliable datasets for institutional research on student success metrics.
- Developed a centralized data warehouse using SQL Server and consolidated data from departmental systems, optimized indexing, and data accessibility for R&D teams, thus, accelerated query performance by 30%.

Data Engineer
Concepo Engineering and Technologies Pvt Ltd

January 2022 - July 2022
Pune, Maharashtra, India

- Built scalable PySpark ETL pipelines on AWS EMR to process over 10 million records, optimizing Spark jobs and improving data processing performance by 40%, resulting in faster and more reliable data delivery.
- Designed and implemented star schema data models in Amazon Redshift, improving query throughput by 35% for analytical teams through reduced join complexity.
- Implemented the provisioning, execution, and termination of Spark jobs on AWS EMR using Apache Airflow (MWAA) and EMR operators, enabling scalable data processing while reducing manual intervention by 80%.

Application Development Associate
Accenture

January 2021 - December 2021
Bangalore, Karnataka, India

- Integrated diverse data from heterogeneous systems, including relational databases and flat files, using Microsoft SSIS into a unified SQL Server data warehouse, enabling robust business intelligence analytics.
- Migrated legacy on-premises SQL databases to an Amazon S3-based data lake using AWS DMS, consolidating over 10 years of historical insurance data into a unified format, reducing on-premises infrastructure maintenance costs by approximately 20% by leveraging cloud storage and eliminating physical server overhead.
- Orchestrated data lineage and metadata tracking, reducing root-cause analysis time for schema changes by 45% and improving audit readiness for compliance checks by 35%.
- Performed automated data validation post-migration from on-premises systems to AWS, achieving 99% accuracy in key metrics used by leadership for strategic planning.
