

Ishaan Chadha

(858) 531-8472 | ichadha@ucsd.edu | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

University of California, San Diego

Sept 2021 - Mar 2025

Bachelor of Science in Mathematics & Computer Science | Minor in Data Science | GPA: 3.7

TECHNICAL SKILLS

Python, JavaScript, TypeScript, SQL, Java, C++, React.js, Zustand, TailwindCSS, ShadCN UI, Node.js, Express.js, Flask, JWT, REST APIs, WebRTC, Mediasoup, Socket.IO, AWS, CI/CD, Docker, Kubernetes, Git, Agile, PostgreSQL, MongoDB

EXPERIENCE

Software Engineer

Nov 2024 – Present

TipTop Technologies (SF-based Startup)

- Lead engineer for **Comm360**, a full-stack AI platform transforming enterprise collaboration, by enabling autonomous meeting participation, real-time multilingual communication, and scalable collaboration workflows.
- Built a self-hosted real-time media stack with WebRTC, mediasoup SFU, and coTURN servers, supporting secure, low-latency video/audio communication for 1000+ concurrent users.
- Developed and deployed a modular architecture with a React.js (Vite), Zustand, and TailwindCSS frontend, and Node.js/Express.js backend secured with JWT authentication and MongoDB for persistent data storage.
- Containerized and deployed microservices using Docker, while driving the entire product lifecycle in an Agile environment, shipping biweekly releases with CI/CD testing pipelines to ensure platform stability and performance.

Software Engineer Intern

May 2024 – Sept 2024

World Salon (NYC-based Startup)

- Designed and engineered an end-to-end AI data pipeline for World Salon's global thought leadership platform, automating the discovery and semantic analysis of 5,000+ speaker profiles from the web and LinkedIn.
- Developed adaptive web scrapers with Selenium, BeautifulSoup, and OpenAI APIs integration to dynamically extract structured data from LinkedIn and 100+ websites, ensuring resilience to frequent layout changes.
- Built backend pipelines to preprocess and persist 10,000+ speaker-topic records in a PostgreSQL database, powering scalable recommendation workflows for high-level discourse events.
- Collaborated in an Agile team to deploy production-ready systems, reducing manual speaker curation effort by 70%.

Software Engineer Intern

May 2022 – Sept 2022

Bajaj Capital Limited

- Enhanced cloud infrastructure by optimizing AWS solutions, including EC2, SES, and ELB, resulting in streamlined operations and improved scalability for high-traffic services.
- Designed and implemented a secure authentication framework leveraging Sequelize, Node.js, and MySQL, reducing unauthorized access attempts by 50% and streamlining the user login processes for 5,000+ users.

Research Assistant

May 2024 – Mar 2025

NeuroML Lab, UCSD

- Published a **Research Paper** accepted into **CCN 2025**, introducing a novel framework for modeling the human visual system by comparing Task-Optimized, Large Language, and Response-Optimized Models.
- Developed the Semantic Spatial Transformer readout mechanism, presented in the paper, which achieved a 30% increase in prediction accuracy across the visual cortex, setting a new standard in the field.

CSE Tutor

Mar 2024 – Dec 2024

UC San Diego Computer Science & Engineering

- Conducted review sessions, and facilitated office hours for over 400+ students, boosting exam performance.
- Collaborated with faculty on curriculum development & addressed 200+ student inquiries.

PROJECTS

Plant Disease Detector | *PyTorch, OpenCV, Agile, Flask, JavaScript*

- Led a group of 4 to develop a custom CNN-based plant disease detection website, implementing an encoder-decoder architecture to accurately identify early signs of plant diseases through advanced image recognition.

LinkedIn AutoConnect | *BeautifulSoup, Selenium, OpenAI API, MongoDB*

- Built a bot to identify, connect, and send personalized messages to recruiters, streamlining networking efforts with BeautifulSoup and Selenium for web scraping and automation, and MongoDB for efficient recruiter data management.
