## EDUCATION

### Indiana University Bloomington

Aug 2023 - May 2025

M.S., Computer Science (GPA: 4.00/4.00)

- **Coursework:** Software Engineering, Computer Networks, Applied Algorithms, Applied Machine Learning

### IIT BHU (Varanasi)

Aug 2019 - May 2023

B.Tech (GPA: 3.80/4.00)

- **Coursework:** Data Structures and Algorithms, Web Development, Network Security, Information Retrieval

## SKILLS

- **Programming Languages:** C, C++, C#, JavaScript, Java, Python, SQL, TypeScript
- **Technologies & Frameworks:** HTML, CSS, Node.js, React.js, Next.js, Express.js, MongoDB, AWS, MS Azure, Git, Docker, Firebase, Selenium, Terraform, CI/CD, MySQL, PostgreSQL, Kubernetes, Pytest, LangChain, LangGraph, OpenAI API, Pinecone

## WORK EXPERIENCE

### Indiana University Bloomington

Jan 2025 - Present

Research Assistant

Bloomington, USA

- Performed comprehensive analysis on fMRI functional connectivity data combined with behavioral assessments (Parenting, Color Vision, SDQ) to explore neural correlates of cognition and mental health using Python and statistical methods.
- Developed, optimized, and fine-tuned machine learning models to predict behavioral outcomes and classify neurological conditions. Applied data preprocessing, feature engineering, and model tuning techniques to improve predictive accuracy and ensure robust performance across diverse datasets.

### Seismic

Jun 2024 - Aug 2024

Software Engineering Intern

Indianapolis, USA

- Designed and implemented an automated end-to-end testing solution for Learning SFTP integration, ensuring accurate data synchronization across systems. This solution led to a 30% reduction in defects by identifying and resolving inconsistencies early in the process.
- Developed and executed over 50 detailed test cases to validate critical functionalities, including user hierarchy, smart groups, dynamic updates, and archiving. This rigorous testing significantly improved the reliability and stability of Seismic's User Management System, minimizing errors and ensuring seamless user data management.

### Persistent Systems

Jun 2022 - Aug 2022

Software Engineering Intern

Pune, India

- Spearheaded the development of a robust DevSecOps pipeline using Azure DevOps, seamlessly integrating Software Composition Analysis (SCA), Static Application Security Testing (SAST), and Dynamic Application Security Testing (DAST) tools to establish end-to-end security coverage across the development lifecycle.
- Enhanced application security by integrating automated scans to detect and mitigate vulnerabilities early, reducing potential security risks by 25%. This proactive approach strengthened system integrity and showcased expertise in implementing robust security measures.

### Harman Connected Services

Oct 2021 - Dec 2021

Software Developer Intern

Gurgaon, India

- Developed an advanced Linux Analyzer Tool to establish secure remote connections with Linux machines, enabling real-time extraction of critical system metrics such as CPU utilization, memory consumption, and active thread details.
- Integrated a configurable time-bound data retention feature, allowing users to selectively store relevant system metrics within a specified timeframe. The extracted data is automatically saved in structured JSON files, enhancing data organization, improving accessibility, and simplifying historical analysis for troubleshooting and performance evaluation.

## PROJECTS

### Custom Chess Game – Real-Time Multiplayer Chess Platform

Apr 2025 - Present

- Developed a full-stack chess platform using Node.js, Express, Socket.io, and chess.js, enabling real-time multiplayer matches with automated role assignment (white/black/spectator) and board state synchronization using FEN notation.
- Implemented drag-and-drop gameplay in the frontend with dynamic board rendering, turn validation, and move broadcasting through WebSocket events, ensuring seamless, interactive gameplay across all connected clients.

### Edemy – Full-Stack Learning Management System

Jan 2025 - Mar 2025

- Built a scalable LMS platform using the MERN stack with Clerk for user authentication and Stripe for secure payments, enabling students to browse, search, and purchase courses; implemented Multer for image uploads and react-youtube for seamless video playback from YouTube.
- Engineered a detailed course architecture with nested models for chapters and lessons, allowing admins to create structured content via a dedicated dashboard; developed student-facing features including dynamic course pages, duration tracking, and a personalized “My Enrollments” section with real-time earnings display for educators.

### MealMate - Food Ordering Application

Aug 2024 - Sep 2024

- Developed a full-stack food ordering application using the MERN stack, incorporating JWT-based authentication for secure user access, a dynamic shopping cart for seamless order management, and Stripe integration for secure online payments.
- Designed an intuitive user experience for effortless browsing and ordering, ensuring smooth navigation across the platform. Implemented an admin panel with real-time order tracking and management capabilities.
