EDUCATION

Masters of Science in Computer Science

August 2023 – May 2025

Arizona State University, Tempe, AZ

Current Coursework: Data Visualization, Distributed Database Systems, Data Mining, Software Security, Statistical Machine Learning

Bachelor of Technology in Information & Communication Technology

August 2019 – May 2023

DA-IICT, Gandhinagar, India

Relevant Coursework: Data Structures, Design & analysis of Algorithms, Database Management Systems, Computer Networks, Operating Systems, System Software, Software Engineering

TECHNICAL SKILLS

C, C++, Python, JavaScript, TypeScript, HTML, CSS, React JS, Next JS, Node JS, D3 JS, MongoDB, GraphQL, Refine, SQL, PostgreSQL, MATLAB, Material UI, Git, CI/CD, Vercel, Docker, AWS

PROFESSIONAL EXPERIENCE

Technology Consultant

August 2024 – May 2025

ASU Enterprise Technology, Phoenix, AZ

- Collaborated with a cross-functional team to develop classroom tech monitoring tools and build React components for a real-time dashboard displaying device health reducing incident resolution time by 30% across 150+ rooms and improving technician response time during classes.
- Wrote Python scripts for scheduled device checks using logs and APIs, integrating Slack notifications to alert staff of failures and reduce effort.
- Developed frontend features for a faculty portal using Material UI & TypeScript, simplifying issue reporting and increasing satisfaction by 20%.
- Integrated ServiceNow APIs to display ticket data on the dashboard, helping teams track and escalate classroom tech issues more efficiently.
- Set up CI/CD pipelines with GitHub Actions and Vercel, ensuring fast, zero-downtime deployment of monitoring tools outside class hours.

Software Engineer

May 2022 – May 2025

Pirimid Fintech, Ahmedabad, India

- Developed key modules for a digital lending platform used by NBFCs and banks to process over 5,000+ loan applications/month, reducing manual effort in underwriting.
- Built dynamic React components for the borrower onboarding flow and integrated Experian and CIBIL APIs for automated credit scoring, reducing user drop-off by 22% and loan approval time by 30% through improved UI/UX and real-time validation.
- Engineered backend APIs using Node.js and Express, managing applicant data, status tracking, and secure document upload via AWS S3.
- Created reusable form schemas and implemented business logic to support 6+ loan products, including personal and SME loans.
- Collaborated with a team of 5 in an Agile environment using Jira, contributing to 4 bi-weekly sprints and delivering 12+ features to production.

Research Intern

February 2022 – May 2023

DAIICT Research Lab, DAIICT, Gandhinagar, India

- Designed optimized C++ algorithms for Quantum Cryptosystems and built interactive HTML/JavaScript visualizations, improving computational efficiency and user engagement by 25%, while applying mathematical optimization techniques to enhance scalability in collaboration with research teams.

PROJECTS

Admin CRM Dashboard | Refine, TypeScript, GraphQL, Codegen, Ant Design ([LINK](#))

- Developed a secure CRM app with authentication, and a dynamic homepage with real-time metrics, using distributed systems for scalability.
- Built a Companies Page with CRUD for 100+ companies, advanced search, and detailed profiles, optimizing sales and improving efficiency with fault-tolerant architecture, while ensuring full device responsiveness and increasing accessibility by 30% with easy-to-manage solutions.
- Designed a Kanban Board with drag-and-drop functionality and real-time updates for 20 concurrent users, enhancing collaboration while scaling to handle growing workloads efficiently.

Prompt - Up | Next JS, NextAuth, MongoDB, Tailwind CSS, React JS ([LINK](#))

- Developed a responsive web app with AI prompt sharing and advanced search for 1000+ users, optimizing performance with scalable systems.
- Implemented AI prompt sharing, allowing users to create, edit, & delete prompts with profile pages, ensuring fault-tolerant architecture.
- Integrated Google authentication via NextAuth, ensuring secure login and reducing issues by 30%, delivering a scalable, low-cost solution.
- Refined community engagement with features like tag-based search for 200+ prompts, profile viewing, and "Copy to Clipboard," enhancing user interaction by 40%, improving responsiveness, and optimizing scalability and performance.

Covid-19 Tracker Web App | React JS, Material UI, REST APIs ([LINK](#))

- Built a web app for global COVID-19 data, tracking millions of cases with 97% accuracy, using scalable systems for efficient handling.
- Visualized real-time stats (active, recovered, death cases) with an interactive Material-UI interface, enhancing engagement and performance.
- Enabled informed decision-making by delivering precise, accessible insights, ensuring scalability and fault tolerance for high-traffic usage.

RESEARCH & PUBLICATIONS

- Sourav Deb, Isha Kikani, and Manish K Gupta, "On the Classification of Codes over Non-Unital Ring of Order 4", published by "Discrete Mathematics, Algorithms and Applications (DMAA)" journal (<https://doi.org/10.1142/S1793830923500763>).
