Ishwarya Linga

Java Full Stack Developer

OBJECTIVE: Experienced Full Stack Developer with 5+ years of expertise in Java, Microservices, front-end frameworks (Angular/React), and cloud technologies, aiming to join a forward-thinking organization to design high-performance applications and drive end-to-end development.

PROFILE SUMMARY:

- Over **5+ years** of expertise in full-stack development, delivering scalable, secure, and high-performance web applications and enterprise solutions and extensive knowledge of **Java, Spring Boot, Hibernate, JPA, and microservices architecture** for developing robust backend solutions.
- Skilled in **Angular, React.js, JavaScript, TypeScript, HTML5, CSS3, and Bootstrap** for crafting dynamic and responsive user interfaces and strong experience in designing and implementing **RESTful and SOAP APIs**, ensuring seamless integration between systems and proficient in **MySQL, PostgreSQL, MongoDB, and Oracle**, with expertise in writing complex queries and optimizing database performance.
- Experienced in **CI/CD pipeline** setup using **Jenkins, Docker, and Kubernetes** for continuous integration and deployment.
- Expertise in **Git, GitHub, and Bitbucket** for source code management and collaboration.
- Proficient in writing unit and integration tests using **JUnit, Mockito, and Selenium** for ensuring code quality and reliability and hands-on experience with **AWS, Azure, and GCP** for deploying and managing applications in cloud environments and adept at working in **Agile and Scrum** environments, with a strong focus on delivering iterative and incremental improvements, skilled in analysing and optimizing application performance using tools like **JProfiler** and **New Relic**.
- Proficient in building highly responsive **Progressive Web Applications (PWAs)** using modern frontend frameworks.
- Expertise in configuring and managing **APIs** with tools like **Postman, Swagger, and Open API specifications**.
- Skilled in **message-oriented middleware** using **Apache Kafka, RabbitMQ, and ActiveMQ** for asynchronous communication, Adept at using **NoSQL databases** such as **Cassandra and Redis** for high-performance data management.
- Skilled in troubleshooting and debugging complex issues using tools like **ELK stack (Elasticsearch, Logstash, Kibana)** and **Splunk** and knowledgeable in **data security and encryption techniques**, ensuring compliance with standards like **OWASP and GDPR** and experienced in implementing **serverless architectures** using **AWS Lambda and Azure Functions** for cost-effective solutions and Skilled in **Apache Kafka** for building real-time data pipelines and event-driven architectures, enabling seamless communication between distributed systems.
- Expertise in using **Maven and Gradle** for build automation and dependency management and experienced in containerization and orchestration for deploying applications at scale in hybrid cloud environments.
- Familiar with **GraphQL** for designing flexible and efficient data-fetching APIs and Strong background in code refactoring and legacy application modernization to improve performance and maintainability.
- Proficient in implementing continuous monitoring and logging solutions using **Prometheus, Grafana, and CloudWatch** to ensure application reliability and uptime and Skilled in deploying **machine learning** models with **TensorFlow and Scikit-learn** to predict and analyse data trends in real-time applications.
- Experienced in integrating third-party authentication and authorization frameworks, including **OAuth 2.0, JWT, and LDAP**, to enhance security and user management and experienced in developing and deploying **Microservices** using **Spring Boot and Docker** for scalable and modular application architectures.
- Developed and maintained enterprise-level applications using **EJB, J2EE, JSP, JSTL, Custom Tag Libraries, JAX-RS, JDBC, Servlets, JNDI, JMS, and JAXB**, ensuring seamless integration between front-end and back-end systems while optimizing performance and scalability for large-scale projects.
- Hands-on experience with **Terraform and CloudFormation** for automating infrastructure provisioning in **AWS and Azure**.
- Proficient in creating and managing **GraphQL APIs** for efficient and flexible data fetching, improving front-end performance and user experience.

EDUCATION:

University of North Texas, Masters Computer and Information Science, USA from 2023 - 2025

TECHNICAL SKILLS:

- **Programming Languages:** Java, JavaScript, TypeScript, HTML/HTML5, CSS/CSS3, SQL
 - **Web Technologies:** JSP, Servlets, JAX-RS, JSTL, Custom Tag Libraries, AJAX, XML, JSON, RESTful APIs
 - **Frameworks:** Spring MVC, Spring Boot, Spring Security, Spring Data JPA, Spring Data REST, Spring JDBC, Hibernate,
 - **Front-End Libraries/Frameworks:** ReactJS, Angular, NodeJS, Express, jQuery, Bootstrap, TypeScript
 - **Databases:** Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB
 - **Version Control:** Git, GitHub, Bitbucket
 - **Build Tools:** Maven, Gradle
 - **Cloud Technologies:** AWS (AWS Lambda, EC2, S3, RDS, DynamoDB, API Gateway, CloudFormation), Azure
 - **Testing Tools:** JUnit, Mockito, Selenium
 - **CI/CD Tools:** Jenkins, Docker, Kubernetes
 - **Messaging:** JMS, ActiveMQ
 - **Containerization:** Docker, Kubernetes
 - **Web Servers:** Apache Tomcat, JBoss
 - **IDE:** Eclipse, IntelliJ IDEA, VS Code
 - **Logging and Monitoring:** Log4j, SLF4J
 - **Other Technologies:** AWS Lambda, JAX-RS, JDBC, JNDI, JAXB, JMS
-

WORK EXPERIENCE:

Synechron

Aug 2024 - Present

Java Full Stack Developer, Irving, Texas, USA

Description: Synechron is a global digital consulting firm focused on accelerating digital initiatives for financial services and technology firms. Involved in building intuitive and responsive user interfaces using modern web technologies such as HTML5, CSS3, and JavaScript frameworks like Angular or React.

Responsibilities:

- Implemented high availability with **Azure** Classic and **Azure** Resource Manager deployment models.
- Designed and implemented an application using **Spring** Boot, **Spring** IOC, **Spring** transactions, Dependency Injection, **Spring** Annotations, **Spring** AOP, **Spring** Actuator, **Spring** Container managed transactions, **Hibernate**.
- Successfully implemented microservices using **Spring** Batch and configured them within the **Spring Security** framework for efficient and isolated processing of specific functionalities.
- Working on creating batch jobs using **Autosys** as the job scheduler and technologies like **SQL** invoker, **UNIX shell scripting** and **core java**.
- Used **Node.js**, **React**, and **Backbone.JS** MVC framework for developing the Single Page Application (**SPA**).
- Experience in working on version controller tools like **Git**, **GitHub**, **CVS**, **Bitbucket**, Subversion (**SVN**) etc.
- Implementing a Continuous Delivery (**CI/CD**) framework using **Jenkins**, Maven in multiple environments.
- Apache Maven tool has been used for the build and deployment of the application.
- Created Low Level Design Documents for services and web application.
- Developed application using Frameworks **Spring** MVC, **Spring** IOC, **Spring** AOP and **Hibernate**.
- Good Experience in **React** for creating interactive UIs using one-way data flow, Virtual dom, JSX.
- Developed test cases using **JUnit** to validate several business rules in the application.
- Designed and coded application components in an **Agile** environment.
- Contributed to the design and maintenance of centralized **Kubernetes** clusters for internal application teams, ensuring high reliability and scalability.
- Used UI components, **Angular** JS directives, controllers, view and routing, service modules, validations using **HTML5**, applying styles using **CSS**, used JQuery to make Ajax calls. Responsible for writing **J2EE** compliant **Java** code for application development effort which involved working with **JSP**, **Servlets**, **JDBC**, **XML**, **EJB**, etc.
- Responsible for the implementation of **JMS/Rabbit MQ** to enhance the application's web service.
- Converted a monolithic app to **Microservices** architecture using **Spring** Boot using 12-factor app methodology. Deployed, Scaled, Configured, wrote manifest file for various **Microservices** in **PCF**.
- Responsible for setting up **Angular** framework to achieve binding data between **HTML** and **JavaScript** objects.
- Create **Docker** containers for managing the life cycle of an application.
- Designed and developed functionality to get **JSON** document from **MongoDB** document store and send it to the client using **RESTful** web service.
- Worked on **Ion API** for working **ION** data, such as creating and manipulation Ion values, performing encoding and decoding, converting Ion data to other formats.

Environment: Agile, Angular, AOP, Autosys, Azure, Bitbucket, CI/CD, core java, CSS, CVS, Docker, EJB, Git, GitHub, Hibernate, HTML, HTML5, J2EE, Java, JavaScript, JDBC, Jenkins, JMS, JSON, JSP, JUnit, Microservices, MongoDB, MVC, Node.js, PCF, React, RESTful, Servlets, Spring, Spring Boot, Spring IOC, Spring MVC, Spring Security, SQL, SVN, XML

GM Financials

Dec 2023 – Jul 2024

Java Full Stack Developer, Fort Worth, Texas, USA

Description: GM Financial is a financial services company, providing auto finance solutions globally to support vehicle sales and customer needs. Created the user interfaces using technologies like HTML, CSS, JavaScript, and frameworks like React or Angular and building server-side logic, APIs, and databases using Java, Spring Boot, and related technologies and working with SQL and NoSQL databases to store and manage financial data.

Responsibilities:

- Developed responsive and dynamic user interfaces using **HTML5**, **CSS3**, **JavaScript**, and **React.js** to enhance the digital experience for GM Financial customers accessing auto loan and lease services.
- Engineered backend services with **Java**, **Spring Boot**, and **JPA** to manage loan processing workflows, customer account data, and vehicle financing transactions efficiently and built **RESTful APIs** using **Spring MVC** and **Spring Boot** for secure data exchange between GM Financial platforms, dealers, and third-party automotive partners.
- Designed and maintained relational database schemas with **MySQL**, **PostgreSQL**, and **Oracle**, optimizing access to lease agreements, credit applications, and payment histories, secured financial applications by integrating **Spring Security**, **OAuth 2.0**, and **JWT** to ensure authorized access to vehicle finance data across web and mobile platforms.
- Enabled real-time transaction monitoring and fraud detection using **Apache Kafka** and **Apache Spark**, improving response time for suspicious activity within auto financing systems and automated deployment pipelines using **Jenkins**, **GitLab CI**, and **CircleCI**, accelerating release cycles for new features and compliance updates across global environments.
- Facilitated frontend and backend validation with **Java Bean Validation** and **React Forms**, ensuring accuracy in financial data input during auto loan application processing.
- Used **Terraform** and **AWS CloudFormation** to automate infrastructure provisioning and updates across multi-cloud deployments.
- Developed auto-generated customer documentation using **iText** and **Apache POI** to create downloadable **PDF** and **Excel** reports for payment history, lease agreements, and billing statements.
- Conducted performance and load testing using **JMeter** to ensure GM financial loan servicing platforms could handle peak loads during month-end processing and dealer promotions and maintained source control and collaborated across distributed teams using **Git**, **Bitbucket**, and **GitHub**, improving workflow transparency and code integration.
- Wrote comprehensive unit and integration tests using **JUnit**, **Mockito**, **Jasmine**, and **Karma** to validate business logic and frontend features, reducing regression and ensuring code quality.

Environment: HTML5, CSS3, JavaScript, Angular, React.js, Java, Spring Boot, Spring MVC, MySQL, PostgreSQL, Oracle, HL7, FHIR, **DICOM**, OAuth, LDAP, JWT, Git, GitHub, Bitbucket, Junit, CI/CD, Jenkins, GitLab CI, CircleCI, Apache Kafka, Apache Spark, Swagger, Postman, WebSocket's, JMeter

Abbott Laboratories (Virtusa)

Jan 2022 – July 2023

Java Developer, Hyderabad, India

Description: Abbott Laboratories is a global healthcare company focuses on a wide range of innovative healthcare solutions, primarily in the areas of medical devices, diagnostics, branded generic medicines, and nutrition. Designing, coding, testing, and debugging Java applications, including both front-end and back-end components and includes writing clean, efficient, and well-documented code, often using frameworks like Spring and Hibernate.

Responsibilities:

- Developed and deployed scalable microservices using **Spring Boot** and managed them through **Kubernetes**, ensuring high availability and performance across Abbott's diagnostic and branded medicine platforms.
- Designed dynamic, responsive front-end interfaces using React.js, Angular, and **TypeScript** to support real-time patient monitoring dashboards and internal diagnostic tools and integrated backend services with **RESTful APIs** developed using **Spring MVC**, and secured them with **JWT** and **OAuth 2.0**, ensuring HIPAA-compliant access and secure communications and managed and optimized clinical and nutritional data using **Oracle** and **MySQL**, with **JPA** and **Hibernate** for ORM, ensuring data accuracy and audit trail compliance in line with FDA requirements.
- Built and deployed containerized applications using **Docker** and hosted them on **AWS ECS**, utilizing **AWS RDS**, **S3**, and **CloudWatch**. Automated deployments via **Jenkins**, **GitLab CI**, and **AWS DevOps**, ensuring streamlined CI/CD workflows.
- Designed and maintained real-time data pipelines using **Apache Kafka** for ingesting and distributing biometric and diagnostic data from connected Abbott medical devices to cloud-based systems.
- Implemented caching strategies using **Redis** to enhance application performance and scalability for product tracking systems and supply chain analytics in the nutrition domain and secured and managed internal APIs with **Spring Cloud Gateway** and **Kong API Gateway**, implementing rate limiting, traffic routing, and service discovery to system stability.

- Leveraged **GitLab** for version control, code review, and integration with CI/CD pipelines, ensuring consistent and traceable software releases across multiple business units and developed intelligent chatbot solutions using **Dialog flow**, integrated with web and mobile platforms to provide real-time support and automate customer inquiries on Abbott's health and nutrition products and built data-driven dashboards using **Power BI** and **Tableau**, integrating with backend APIs to visualize diagnostic trends, supply chain metrics, and nutritional product performance across global markets.
- Wrote automation scripts in **Python** for monitoring, health checks, and infrastructure validations.
- Automated test suites and regression testing using **Selenium**, **JUnit**, and **Mockito**, enhancing application reliability and reducing manual testing effort for regulated software modules.

Environment: microservices, Spring Boot, Kubernetes, React.js, Angular, TypeScript, Oracle, MySQL, Docker, AWS, Jenkins, Apache Kafka, API Gateway, Hadoop, CI/CD, GitLab CI, Spring MVC, RESTful APIs, JWT, Hibernate, Dialog flow, Power BI, Tableau, Selenium, JUnit, Mockito.

Shriram Life Insurance

Mar 2020 – Dec 2021

Java Developer, Bangalore, India

Description: Shriram Life Insurance is a prominent life insurance company in India, known for providing a wide range of life insurance products designed to meet the financial needs of individuals and families. Designing and implementing RESTful APIs and microservices for communication between different systems and Conduct unit, integration, and system testing to ensure application quality and functionality, and troubleshoot and resolve issues.

Responsibilities:

- Implemented robust and scalable solutions using **Spring Boot**, **Hibernate**, and **JPA** for secure policy data handling and efficient **API** development supporting Shriram Life's digital transformation initiatives.
- Developed responsive and user-friendly front-end interfaces using **Angular**, **ReactJS**, **JavaScript**, and **CSS3**, improving user engagement for policyholders, agents, and branch users and managed data operations and transactional consistency using **SQL Server**, **Oracle**, and **MySQL**, integrated with **Spring Data** for seamless backend connectivity.
- Worked closely with **SREs**, platform teams, and developers to scale internal tools and support rapid deployment cycles.
- Designed and deployed containerized microservices with **Docker** and **Kubernetes**, while enabling inter-service communication using **Spring Cloud**, facilitating scalability and modular deployments on cloud platforms.
- Automated build and deployment pipelines using **Jenkins** and **GitLab CI**, enabling continuous integration and delivery with version control and artifact management and ensured system quality with automated unit and integration testing using **JUnit**, **TestNG**, and **Mockito**, supporting reliable deployments in line with life insurance compliance.
- Conducted API integration testing and validation using **Postman** and **Rest Assured**, ensuring the reliability of RESTful services across underwriting, claims, and policy management modules, Improved observability and accelerated debugging by implementing logging with **Log4j**, **SLF4J**, and monitoring tools like the **ELK Stack**, supporting faster resolution.
- Designed microservices architecture using **Spring Cloud**, enabling distributed transaction management and seamless data flow across customer onboarding and policy lifecycle services and integrated **OAuth2** and **JWT** for secure authentication and authorization across microservices, protecting sensitive policyholder and agent data. Built custom dashboards and analytics reports using **Grafana** and **Prometheus**, enabling real-time monitoring of application performance.
- Explored **Go** for performance-critical microservices; familiar with core patterns and tooling.

Environment: Spring Boot, Hibernate, JPA, Angular, ReactJS, JavaScript, CSS3, SQL Server, Oracle, MySQL, Spring Data, Docker, Kubernetes, Spring Cloud, Jenkins, GitLab CI, JUnit, TestNG, Mockito, Postman, Rest Assured, Log4j, SLF4J, ELK Stack, OAuth2, JWT, Grafana, Prometheus.
