

Summary

- Detail- Versatile QA Engineer with 3+ years of experience in software testing and quality assurance across diverse development projects.
- Expert in designing comprehensive test strategies, creating and executing automated and manual test scripts, and ensuring optimal test coverage.
- Proficient in all stages of STLC and experienced with CI/CD pipelines, defect management tools (JIRA, ServiceNow, TFS), and mobile testing.
- Demonstrated success in system, regression, performance, and security testing with a strong focus on business continuity.
- Proven ability to collaborate with cross-functional teams to validate product quality throughout the development lifecycle while maintaining meticulous requirement traceability.

TECHNICAL SKILLS

- **Testing Methodologies:** System Testing, Integration Testing, Regression Testing, Security Testing, Performance/Load Testing, Mobile Device Testing, Business Continuity/Disaster Recovery Testing, QA Testing
- **Automation Tools:** Selenium WebDriver, TestNG, JUnit, Cucumber, Appium, Cypress
- **Test Management:** Test Strategy Development, Test Case Creation, RTM Documentation, Test Coverage Analysis, UAT Preparation
- **Defect Management:** JIRA, ServiceNow, TFS, GitHub, Confluence
- **CI/CD & DevOps:** Jenkins, GitLab CI, GitHub Actions, Docker, Kubernetes
- **Programming Languages:** Java, Python, SQL, JavaScript, TypeScript
- **Other Skills:** STLC & SDLC Concepts, Agile Methodology, Technical Documentation, BDD, Troubleshooting, Problem-solving

CERTIFICATIONS

- International Software Testing Qualifications Board (ISTQB) - In Progress
- Certified Associate in Software Testing (CAST) - In Progress

PROFESSIONAL EXPERIENCE

Test Automation Engineer | Narvee Tech Inc | Dallas, TX |

Jan 2024 - Present

- Developed and maintained automated test frameworks using Selenium WebDriver and TestNG, achieving 90% test coverage across core business functionalities and reducing manual testing efforts by 60%
- Created comprehensive test strategies and test plans aligning with business requirements and design documents
- Implemented robust requirement traceability matrices (RTM) to ensure all business requirements were tested and validated before UAT
- Formulated comprehensive API testing strategies utilizing REST Assured and Postman, creating test suites that identified 25+ critical defects pre-release
- Established Jenkins CI/CD pipelines, integrating automated tests with GitHub for seamless deployments
- Collaborated with cross-functional teams to validate product quality throughout the development lifecycle, resulting in 35% fewer post-release defects
- Performed troubleshooting and root cause analysis, reducing issue resolution time by 40%

Programmer Analyst Trainee | Cognizant Technology Solutions | India |

Feb 2022 - Dec 2022

- Architected test automation frameworks for ServiceNow and Salesforce applications, reducing test execution time by 40%
- Conducted thorough system testing and parallel testing for SaaS platforms, ensuring proper integration with existing systems
- Implemented performance and load testing using JMeter, identifying and resolving 12 critical bottlenecks before production
- Enhanced CI/CD pipeline in GitLab with automated regression test suites, achieving 95% test coverage
- Created detailed test documentation including test cases, test results, and defect reports using standardized templates
- Prepared sample test data sets for various testing scenarios, ensuring comprehensive coverage of business requirements
- Improved defect management processes using JIRA, reducing resolution time by 30%

Quality Assurance Engineer | Pencap Technologies | India |

Jan 2021 - Jan 2022

- Led manual and automated testing initiatives using Selenium WebDriver, executing over 500 test cases across multiple releases
- Developed comprehensive test plans that reduced post-release issues by 15% and optimized system reliability
- Identified missing test cases and created new ones to improve test coverage by 25%
- Performed detailed error analysis and corrective actions to optimize software performance
- Collaborated with development teams to validate application security and conduct disaster recovery testing
- Tracked and managed defects using JIRA, ensuring timely resolution and quality improvement
- Participated in mobile device testing for cross-platform applications, validating functionality across different operating systems

PROJECTS

Aspect Based Summarization for Product Reviews |

Jan 2024 - May 2024

- Engineered an NLP-driven system for product review analysis with comprehensive quality verification framework
- Implemented automated testing protocols that validated data processing accuracy with 98% reliability
- Created test scripts to verify system performance across varied data inputs and user scenarios

Smart Attendance System using Face Recognition |

Aug 2023 - Dec 2023

- Designed a high-accuracy real-time facial recognition system with extensive test coverage for different lighting conditions
- Developed and executed test cases for various environment scenarios, achieving 95% recognition accuracy
- Implemented quality engineering principles to ensure system reliability and performance under stress conditions

EDUCATION

- Master's in Information Systems | University of North Texas |

Jan 2023 - Dec 2024

- Bachelor's in Electronics & Instrumentation Engineering | KITSW |

Aug 2018 - May 2022
