

Jagadeesh Vadlamudi

JAVA FULL STACK DEVELOPER

Missouri, USA | (609) 531-0321 | jagadeeshvadlamudi1@gmail.com | [LinkedIN](#)

SUMMARY

- Java Full Stack Developer with 4+ years of experience in developing robust, scalable applications for fintech and e-commerce sectors.
- Expertise in Java, Spring Boot, and React/Angular for full-stack development, with a proven track record of optimizing system performance and enhancing user experience.
- Proficient in designing and implementing microservices architectures, resulting in significant improvements in processing times and system scalability.
- Strong experience with AWS services including EC2, S3, and Lambda, for building efficient and cost-effective cloud-based solutions.
- Skilled in database management and optimization, working with MySQL, MongoDB, and implementing ORM technologies like Hibernate to enhance query performance.
- Adept at developing and integrating RESTful APIs, improving system interoperability and facilitating seamless data exchange between components.
- Strong background in data processing and analysis, utilizing technologies like Kafka for real-time data streaming and implementing machine learning models for predictive analytics.
- Experienced in Agile methodologies, CI/CD practices, and DevOps tools such as Jenkins, Docker, and Kubernetes for streamlined development and deployment processes.

TECHNICAL SKILLS

Front-End Technologies:	HTML5, CSS3, Bootstrap, UI Material, JavaScript, Typescript, ES6, React JS, Redux, Angular
Back-End Technologies:	Core Java, Java 8, C++, Spring Boot, Spring MVC, Web Services, RESTful API, Microservices, Hibernate ORM, Streams, Lambda Functions
J2EETechnologies:	Servlets, JSP, JDBC, JMS, Maven, Multi-threading
IDEs:	Visual Studio Code, IntelliJ IDEA, Eclipse, Maven, Gradle, NetBeans
Web Services:	RESTful, SOAP
Databases:	SQL, MongoDB (NoSQL), PostgreSQL, MySQL, Oracle
CI/CD & Tools:	Jenkins, Code Ship
Testing tools:	JUnit, Mockito, React Testing Library, Jest
Cloud & Deployment:	AWS, Docker
Web Server:	Apache Tomcat, WebLogic
Other:	Agile, Jira, SVN, Ant, Git, Scrum, GitHub, Kubernetes, Bitbucket, Swagger Open API, SonarQube, POSTman
Operating System:	Windows, LINUX, Mac OS

EXPERIENCE

Java Full Stack Developer | UMB Financial Corporation, MO, USA

May 2024 – Current

- Developed **secure and scalable RESTful APIs using Spring Boot** to support client document uploads, real-time KYC data validation, and system notifications, enabling seamless integration across distributed financial microservices.
- Designed a **flexible MongoDB schema** for storing customer profiles, account-related documents, and onboarding metadata, supporting dynamic business rule changes without impacting existing workflows.
- Architected **onboarding platform using a microservices-based architecture**, separating core functions such as document processing, identity verification, notification delivery, and user authentication, resulting in improved system modularity and fault tolerance.
- Implemented **OAuth2 and JWT** for robust, role-based access control, securing sensitive client data such as identification documents and financial statements in compliance with **GLBA, OWASP, and internal security protocols**.
- Integrated **AWS S3** for secure, scalable cloud storage of onboarding documents (W-9s, financial disclosures), using **encryption, pre-signed URLs, and lifecycle policies** to optimize performance and reduce archival costs.

- Created **responsive Angular components** with **TypeScript and Angular Material** to facilitate account opening, document uploads, and advisor approvals, increasing front-office operational efficiency by **30%**.
- Applied **Java validation annotations** (@NotNull, @Email) and custom service-layer logic to enforce data integrity across financial form submissions, reducing backend errors and ensuring accurate data persistence in MongoDB.
- Executed **Apache Kafka** for real-time event streaming, enabling immediate propagation of client status changes and document submission events across the onboarding platform.
- Built **SOAP web services** to integrate with legacy credit bureau APIs and external compliance systems for identity verification, enhancing interoperability and reducing processing time by **25%**.
- Configured **Jenkins CI/CD pipelines** to automate build, testing, and deployment processes across environments, reducing manual integration risks and accelerating delivery cycles for onboarding feature releases.

Java Full Stack Developer | HCL Tech, India

Jun 2020 – Aug 2023

- Developed the entire project using **Spring Boot** and **Java**, to manage the customer order lifecycle (order creation, processing, tracking) and ensuring high availability and performance across various user interactions.
- Created interactive forms using **HTML5** form elements (input fields, buttons, date pickers, etc.) to facilitate customer interactions such as placing orders, updating payment details, and tracking orders, while ensuring the forms were user-friendly and intuitive.
- Designed a **microservices architecture** using **Spring Boot** and **Spring Cloud**, dividing the system into smaller, independent services such as **Order Service**, **Payment Service**, and **Inventory Service**, which improved scalability and maintainability.
- Applied **RESTful APIs** with **stateless communication**, ensuring each request contains all the information needed for processing, which improved the scalability and performance of the system by eliminating the need to store session information on the server.
- Used **Hibernate ORM** and **JPA** for effective data mapping and persistence, creating optimized SQL queries that improved data retrieval speed by **15%**, and ensuring consistency and integrity of order data stored in **MySQL**.
- Implemented **Redis** caching to store frequently accessed data, such as order details and status, reducing database load and improving response times by **20%**, ensuring faster order updates and enhanced system performance.
- Integrated third-party **payment gateway APIs** using **Spring Integration**, enabling seamless and secure online payment processing during the order placement process, supporting various payment methods (credit cards, e-wallets).
- Made interactive user interfaces for the Customer Order Management System using **React**, enabling users to efficiently track and manage orders with real-time updates, reducing order management time by **30%** and improving user engagement by **25%** across devices.
- Developed real-time order tracking functionality using **Node.js** and **WebSockets**, allowing users to receive live updates on order status, payment processing, and shipment status without refreshing the page, enhancing user experience and engagement.
- Implemented **parallel streams** to perform concurrent operations such as processing multiple orders, generating reports, or updating the inventory, improving performance when handling large datasets or operations in a multi-core environment.
- Combined **Docker** into the **CI/CD pipeline (GitLab CI)** to automate the building, testing, and deployment of Docker images, ensuring consistent, repeatable deployments and reducing human error in the process.
- Used **Mockito** to create mock objects for unit testing the **service layer** of the **Customer Order Management System**, ensuring that business logic (order creation, payment processing) was functioning correctly in isolation, without dependencies on external services or databases.

EDUCATION

Master of Science in Information Systems – Saint Louis University, Saint Louis, Missouri, USA

Bachelor of Technology in Electrical & Electronics Engineering – Siddharth Institute of Engineering & Technology, India.

CERTIFICATION

AWS Certified Solutions Architect – Associate | Amazon Web Services (AWS) | April 2025
