

BHOGAPATHI JAGAT SAI

Memphis, TN, 38104

jagatbhogapathi@gmail.com | (678) 779 2047 | [LinkedIn](#)

SUMMARY

Motivated and technically skilled fresher with strong foundational knowledge in Cloud Computing and DevOps practices. Familiar with AWS, Azure, Linux, Git, and containerization tools like Docker and Kubernetes. Trained in CI/CD pipelines, version control, and basic scripting using Python and Bash. Hands-on experience with infrastructure automation tools like Terraform and Ansible. Quick learner with a passion for cloud-native technologies, automation, and system optimization. Eager to contribute to a collaborative team and grow as a Cloud and DevOps Engineer.

EDUCATION

University of Memphis - Memphis, TN

August 2023 - May 2025

Master's in Information Technology

REVA University - Bangalore, India

June 2019 - May 2023

Bachelor of Science (Honours) – Cloud Computing and Big Data

RELEVANT SKILLS

Languages: Python | PowerShell | C | MySQL | HTML | CSS | Javascript

Technologies/Frameworks: Kubernetes | Microsoft Azure | Virtual Machines | Infrastructure as a Service (IaaS) | Cloud Platforms | Cloud Infrastructure | Cloud Management | Cloud Storage | Cloud Computing | Windows PowerShell | Microsoft Power Automate/Flow | Cloud Development | Serverless Computing | Application Deployment | CI/CD | Continuous Deployment

Other Concepts / Practices: Cloud Services | Cloud Security | Cloud Architecture | Disaster Recovery | Patch Management | IAM | IaC | System Monitoring | RBAC | Software Development | Development Environment | Event-Driven Programming | Data Security | Data Storage | Data Storage Technologies

CERTIFICATION

Azure Developer(AZ204)

Microsoft Certified: Azure Fundamentals(AZ900)

PrivacyOps Certifications

AI Security

PROFESSIONAL EXPERIENCE

CloudEnabled Pte Ltd – Singapore

Cloud and DevOps intern

March 2022 - July 2022

- Assisted in the deployment, monitoring, and maintenance of cloud infrastructure across Azure, ensuring high availability and scalability. Collaborated with cross-functional teams to automate infrastructure provisioning and configuration management using tools like Terraform and Ansible.
- Supported the implementation and management of CI/CD pipelines. Monitored system performance and helped optimize cloud resources to reduce costs and improve efficiency. Contributed to the development of automated testing frameworks, improving the reliability of deployments and reducing manual intervention.
- Assisted in the creation and management of cloud-based services, including virtual machines, storage, and databases, ensuring compliance with security best practices. Participated in troubleshooting and resolving incidents related to cloud infrastructure, ensuring minimal downtime and rapid recovery. Gained hands-on experience in containerization technologies (Kubernetes) and their integration into cloud environments.

PROJECT EXPERIENCE

Building Highly Available Application On Azure Cloud

July 2022

Deployed a custom HTML-based website using Microsoft Azure App Service, showcasing the simplicity and efficiency of hosting web applications on Azure. Implemented the deployment independently, configuring the platform to support custom code and ensuring a seamless launch process. Integrated Azure Application Insights to monitor the website's performance and track deployment status in real time, enhancing visibility into operational metrics and ensuring optimal uptime and responsiveness.

Deploy an AWS architecture with VPC, EC2, RDS, auto-scaling with Terraform

Jan 2022

Designed a highly available two-tier AWS architecture using Terraform, implementing reusable modules for cost-effective scaling. Automated deployments with dynamic provisioning and managed resources through AWS Service Catalog for consistent, governed cloud environments.

Enabling Cloud CDN on a web application in AWS

October 2021

Designed and implemented a content delivery optimization solution using Amazon CloudFront to reduce latency by caching content at edge locations. Configured CloudFront to fetch from multiple origins like S3, EC2, and custom servers, optimizing static and dynamic content delivery. Fine-tuned caching for real-time updates, improving performance and user experience. Gained hands-on experience with CloudFront settings, cache behaviors, and AWS integrations.
