SUMMARY

Data Engineer with 3+ years of experience architecting robust ETL pipelines and optimizing cloud-based data ecosystems. Expert in Python, SQL, and distributed processing frameworks to transform complex datasets into actionable intelligence. Proficient in implementing data governance protocols, automating monitoring solutions, and reducing processing times through performance optimization. Skilled in CI/CD integration and cross-functional collaboration to deliver business-critical analytics infrastructure.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Programming Languages: Python, SQL, R

Libraries: TensorFlow, PyTorch, Scikit-learn, Keras, Pandas, NumPy, SciPy

Big Data and ETL Tools: PySpark, Apache Kafka, Hadoop (HDFS, Hive), Apache Airflow, dbt

Databases & Warehousing: MySQL, PostgreSQL, SQL Server, Snowflake, MongoDB

Data Visualization: Tableau, Power BI, Advanced Excel, Matplotlib

Cloud Platforms: AWS (S3, Glue, Redshift), Azure (Data Factory, Databricks, Blob Storage)

Version Control and CI/CD: Git, GitHub, Bitbucket, Azure DevOps, Jenkins

Infrastructure as Code and Containerization Tools: Terraform, Docker, Kubernetes

Soft Skills: Problem-Solving, Effective Communication, Cross-Functional Collaboration, Attention to Detail, Stakeholder Management

EDUCATION

Master of Science in Business Analytics

February 2025

Saint Peter's University, New Jersey

Bachelor of Science in Computer Science and Commerce

April 2022

Acharya Nagarjuna University, India

PROFESSIONAL EXPERIENCE

Data Engineer | PNC, New Jersey

August 2024 - Current

- Developed and maintained **ETL pipelines** using **Python**, **SQL**, and Apache Airflow, achieving 99.8% uptime for critical financial data workflows. Automated data processing tasks using **AWS Glue** to reduce manual intervention and ensure reliability.
- Collaborated across teams within **Agile** framework to deliver structured datasets for fraud detection, using **dbt** for **SQL** based transformations in **Snowflake** while implementing data quality checks with **Python** testing frameworks
- Implemented data security protocols for sensitive information using role-based access controls and encryption standards, maintaining compliance with financial regulations and documenting security processes using **Git version control**.
- Optimized **SQL Server** and **PostgreSQL** databases, reducing query execution times and improving cloud infrastructure costs through performance tuning and **AWS Redshift** partition strategies
- Architected serverless data processing workflows using **AWS Lambda** for event-driven transformations and **S3** for cost-effective data lake storage, implementing automated data lifecycle policies and cross-region replication for disaster recovery.
- Built real-time financial market data pipeline utilizing **Apache Kafka** for ingestion and **PySpark** for distributed processing, enabling near-instantaneous analytics visualized through **Tableau** dashboards
- Automated data quality monitoring with **Python** and **Airflow**, implementing CI/CD pipelines via **GitHub** for version control and deployment, reducing data incidents by 60%.

Data Engineer | Vivma Software Inc, India

May 2021 - August 2023

- Engineered **ETL/ELT pipelines** using **Apache Airflow** and **SQL**, reducing data processing time while leveraging **Python** scripts for data transformation tasks and ensuring consistent delivery for critical reporting systems.
- Migrated legacy **Oracle** databases to **Azure Synapse Analytics** with zero downtime, implementing optimized schema design and **SQL** performance tuning that improved query response time by 45%.
- Built scalable data ingestion pipelines with **Python** and **Azure Data Factory**, automating integration of structured and unstructured data from 10+ sources into centralized warehouses, boosting downstream data availability.
- Established data quality validation frameworks using **dbt** tests and custom **Python** scripts, reducing data inconsistencies by 70% while implementing **Git** for version control of all validation code.
- Collaborated within **Agile** environment to translate business requirements into technical specifications, creating **PostgreSQL** data models and documentation that reduced development cycles.
- Implemented scalable data architectures using **Azure Blob Storage** for storage and **PySpark** for processing, enabling efficient handling of growing datasets while using **GitHub Actions** for CI/CD automation of pipeline deployments.

CERTIFICATIONS

AWS Certified Data Engineer Associate
