EDUCATION

University of California- San Diego *B.S. Data Science*

Expected Graduation: March 2026

Cumulative GPA: 3.8 | Honors Program

Coursework: Linear Algebra, Data Analysis Methods, Statistical Modeling, Data Management, Machine Learning (Linear Regression, K-means Clustering, Decision Trees, Random Forest Classifiers), Business Analytics

Leadership: Marketing Committee at Data Science Student Society; PR Chair and high school mentor at EDGE UCSD; Web and Design Committee for Envision

SKILLS & CERTIFICATIONS

- **Programming / Libraries:** Python (Pandas, Numpy, Scikit-learn, Matplotlib, Seaborn, JSON Parsing), SQL, PostgreSQL, R, C++, Flask, RESTful APIs, HTML/CSS/JavaScript, React
- **Tools & Platforms:** Tableau, Jupyter Notebook, Git, Microsoft Excel/PowerPoint/Outlook, Canva, Mailchimp, Cursor, Prompt Engineering (ChatGPT)
- **Focus Areas:** Hypothesis Testing, ETL Pipelines, Data Warehousing, Data Visualization, Predictive Modeling, Natural Language Processing, Intelligent Automation
- **Certifications:** Google Data Analytics Certification | Udemy Python Bootcamp Certification

WORK EXPERIENCE

Lexim AI - Data Science Intern

June 2025 - Present

- Leveraged APIs and NLP tools (Google Gemini, PyPDF2) to extract, summarize, and analyze large volumes of public regulatory feedback, supporting real-world decision-making insights
- Built a full-stack billing dashboard (Flask, React, PostgreSQL) for real-time payment tracking and reporting.
- Automated data-to-report workflows, converting structured and unstructured data into human-readable insights, improving scalability of analytics

AMD - Software Engineering Intern

June 2024 - Sept 2024

- Benchmarked AMD CPU performance across multiple AI models, producing insights on latency and throughput
- Analyzed large-scale experiment results to optimize configurations, presenting findings to executive leadership.
- Demonstrated an 11x improvement in performance metrics with clear implications for AI-driven workloads.

Montecito Preschool - Substitute Preschool Teacher

July 2022 - May 2024

- Led and supervised classrooms of 20+ children, fostering engagement, safety, and learning.
- Strengthened communication and adaptability skills through managing dynamic classroom environments.

DATA SCIENCE PROJECTS

Predicting Recipe Ratings ([link](#))

- Developed a prediction model to analyze how recipe length and ingredient count affect ratings, to help cooking content creators optimize their recipes; achieved a 0.91 F1-score
- Cleaned raw dataset of 100k+ recipes from food.com using python pandas
- Ran exploratory analysis and created visualizations to better understand variables in dataset
- Used Grid Search to determine the optimal parameters for a Random Forest Classifier model

Will the Driver Accept the Coupon? ([link](#))

- Created a prediction model to determine success of an ad (promotional coupon) targeting a driver given a variety of variables such as features of the driver, passengers in the car, etc.
- Performed exploratory data analysis and created graphs to highlight trends in the data
- Applied feature engineering to create K Nearest Neighbor model, and achieved 67% accuracy

Disney Plus Dashboard ([link](#))

- Created Tableau dashboards to showcase trends such as the top 10 movie directors and distribution of ratings
- Preprocessed data containing information about Disney Plus streaming service by removing/replacing NaNs using Python Pandas in order to prepare it for visualizations
