PROFILE

Data Analyst with experience in SQL, Python, and Tableau, analyzing datasets of 500K+ records to deliver insights that improved decision-making speed by 25%. Skilled in building interactive dashboards, automating reports, and applying statistical analysis to support business and customer analytics.

EDUCATION

University at Buffalo, The State University of New York MS in Data Science	Jan 2024 – May 2025
Coursework: Hadoop, Apache Spark, Machine Learning, Statistical Data Mining, Postgress	GPA: 3.60 / 4.0

WORK EXPERIENCE

- | | |
|--|---------------------|
| MLOps Engineer Intern, Vosyn | Sep 2025 – Present |
| <ul style="list-style-type: none">Orchestrated model training pipelines and preprocessing workflows, increasing efficiency by 20%Implemented CI/CD solutions for build, release, and monitoring, reducing deployment failures by 15%Partnered with a 5-member development team to deploy a scalable voice synthesis platform, handling 1K+ daily API calls and maintaining 99.9% uptime with robust security protocols | |
| Data Analyst, Advids | Jan 2023 – Dec 2023 |
| <ul style="list-style-type: none">Analyzed 500K+ records using SQL and Python, boosting accuracy by 20% and accelerating computation by 30%.Refined 50+ database queries and schema designs, enhancing system performance at scale.Presented 10+ interactive dashboards and reports in Tableau/Power BI, driving data-informed decisions. | |
| Deep Learning Intern, Swabhav Techlabs | Jan 2022 – Jun 2022 |
| <ul style="list-style-type: none">Attained 92% accuracy in object detection and mask classification through transfer learning.Engineered and deployed a number plate recognition system in Flask, processing 100 plates/min at 95% accuracy.Optimized feature extraction techniques, cutting training time by 25% and raising precision by 15%. | |

PROJECTS

- Smart Voting System using Blockchain**
Tools: Python, Flask, Solidity, Web3.py | **Ethereum, Decentralized Applications**
- Engineered **Blockchain-based voting platform** using **Ethereum smart contracts**, enabling **100% verifiable and tamper-proof ballots**.
 - Linked **Flask frontend** with **Web3.py** to process **voter identity, candidate selection, and on-chain ballots**.
 - Simulated 500+ transactions on a local **blockchain (Ganache)** environment as part of testing, guaranteeing zero data tampering and maintaining verifiable auditable records across all transactions.
- Cyberbullying Detection using NLP**
Tools: Python, Scikit-learn, NLTK, Pandas | **NLP, Text Classification**
- Built an **NLP classifier** achieving **90% precision** and **88% recall** on **20K+ social media posts**.
 - Fine-tuned **SVM** models using **TF-IDF** features extracted from over 1M tokens, leading to a 5% reduction in the false positive rate during sentiment analysis of customer reviews.
 - Evaluated the performance of 5+ machine learning models using 5-fold **cross-validation**, achieving a 2% improvement in model accuracy through targeted hyperparameter optimization techniques.
- Plant Disease Detection**
Tools: Keras, Python, OpenCV, Flask | **CNNs, Image Classification**
- Designed an **8-layer CNN** to classify **8 plant diseases** with **95% accuracy** using a dataset of **50K+ leaf images**.
 - Augmented **image data** (flip, zoom, rotate) to improve **robustness** and **generalization** by **15%**.
 - Delivered a **real-time disease detection tool** with a **user-facing interface**, showcasing skills in **model deployment** and **UI integration**.

SKILLS & TOOLS

Programming: SQL, Python (Pandas, NumPy), R, Excel
Visualization: Tableau, Power BI, QuickSight, Matplotlib, Seaborn
Analytics: Exploratory Data Analysis, Hypothesis Testing, A/B Testing, Regression, Classification
Databases: PostgreSQL, MySQL
Cloud/ETL: AWS (Athena, Glue), Data Cleaning, Data Wrangling, Joins & Aggregations
Other: Statistical Modeling, KPI Reporting, Dashboard Development

PUBLICATIONS

Spatiotemporal Forecasting of Meteorological Variables using ConvLSTM Networks
Co-authored a study introducing a **ConvLSTM**-based model for more accurate temperature and humidity prediction by capturing both spatial and temporal patterns in weather data
