Summary

Data Analyst skilled in SQL, Tableau, and data visualization, with experience analyzing large datasets to uncover trends and deliver actionable insights. Builds dashboards, automates reports, and communicates findings to diverse audiences. Strong background in data quality, statistical analysis, and supporting data-driven decision-making.

Areas of Expertise

- **Programming Skills:** C, Python, HTML5, CSS, XML, SQL, MATLAB
- **Data Analysis and Visualization:** Tableau, Matplotlib, Seaborn
- **Database and Querying:** SQL (data extraction, transformation, and analysis)
- **Statistical Analysis:** Pattern and anomaly detection, Regression, Correlation, Data mining
- **Reporting and Presentation:** Excel, Google Sheets, PowerPoint, Google Slides

Education

University of Nevada, Reno

Master's in Computer Science and Engineering, GPA: 3.92/4

USA

August 2023–May 2025

Birla Vishwakarma Mahavidhyalaya, Anand

Master's in Computer Engineering, GPA: 7.82/10

India

August 2014–June 2016

Government Engineering College, Rajkot

Bachelor's in Computer Engineering, GPA: 8.24/10

India

August 2010–June 2014

Advanced Courses & Professional Certifications

Intro to SQL (Kaggle)

Fundamental AI Concepts (Microsoft)

Introduction to LLM (IBM)

Python for Data Science (Cognitive Class)

Generative AI Explained (NVIDIA)

Academy Accreditation - Generative AI Fundamentals (Databricks)

Projects

SQL Data Analysis on BigQuery Public Datasets: Implemented SQL queries on BigQuery public datasets—including Global air quality, World Bank international education, Hacker News, Bitcoin, Stack Overflow and several others—analyzing trends and data quality, and creating visualizations to deliver actionable insights.

Global Air Quality Insights: Analyzed BigQuery's global air quality dataset to study pollution across cities and countries, using SQL to aggregate measurements, detect anomalies, identify trends, and created visualizations to deliver actionable insights into air quality patterns.

Global Education Trends Analysis: Explored global education indicators using World Bank international Education dataset from BigQuery. Applied SQL for filtering, aggregation, and joins to compare literacy rates, school enrollment, and outcomes across countries, and developed visualizations to highlight trends and disparities.

Hacker News Engagement Analysis: Analyzed the Hacker News dataset from BigQuery public datasets to understand trends, comments, and user engagement. Performed data cleaning, aggregation, and analysis to identify popular topics and posts. Built visualizations to provide insights into content and community behavior over time.

Bitcoin Market Trends Analysis: Analyzed the Bitcoin dataset from BigQuery public datasets to examine historical price movements, trading volumes, and market trends. Applied SQL window functions and aggregations to identify patterns in cryptocurrency trading. Produced summary tables and visualizations to support data-driven insights for market analysis.

Stack Overflow Community Insights: Examined the Stack Overflow dataset from BigQuery public datasets to study trends in questions, answers, and tag usage. Leveraged SQL queries to aggregate data and detect patterns for understanding developer engagement and topic popularity, and created visualizations to present actionable insights.

Experience

Sky Software

Data Analyst

Rajkot, India

October 2019–December 2021

- Utilized SQL to extract and manage data from databases, ensuring precision and reliability for analysis.
- Performed data cleaning and preprocessing to improve accuracy and maintain data quality.
- Ensured data quality by identifying inconsistency and implementing validation processes.
- Developed and maintained test cases for data validation, documenting results and improvement.
- Created impactful data visualizations and detailed reports to support data-driven decision-making processes.

Additional Information

Authorized to work in the United States on H4 EAD. Do not require visa sponsorship now or in the future.
