SUMMARY

Full Stack Developer with 4+ years of experience building scalable, consumer-facing web applications using Java, Spring Boot, React.js, and Node.js in cloud native environments. I am proficient in TypeScript, JavaScript, and Java, with expertise in RESTful APIs, microservices, database design using SQL Server, MySQL, and Snowflake, and cloud deployment on AWS with GitHub based CI/CD pipelines. Passionate about end-to-end system design, from UI and UX optimization in React and Angular to backend architecture, performance tuning, and observability. Strong problem solver with a track record of delivering high performance, maintainable code in Agile teams while improving code quality, security, and overall system reliability.

TECHNICAL SKILLS

- Programming Languages: JavaScript, TypeScript, Java, Python, C, C#, SQL, JSON.
- Scripting: Node.js, Express.js, jQuery, Unix Shell Scripting, Bootstrap.
- Web Development: React.js, Redux, Next.js, Angular, PHP, HTML, CSS, Responsive Web Design, Server-Sent Events (SSE)
- Backend: Node.js, Express, RESTful APIs, GraphQL, FastAPI (Python)
- Cloud & DevOps: AWS (EC2, S3, Lambda, SQS, SNS, RDS, CloudWatch), Azure, Vercel, Docker
- Databases: MySQL, PostgreSQL, MongoDB, DynamoDB (Schema Design, Query Optimization)
- Tools: Datadog, Git, GitHub, Cypress, Mocha, Jasmine, Jira, Jenkins, Postman, Apache, Maven
- Methodologies: SSO, SOA, SaaS, Agile/Scrum Development, Test driven development (TDD), SOLID.

WORK EXPERIENCE

*Community Dreams Foundation, Remote
Software Developer*

August 2025 - Present

- Lead full-stack development of consumer-facing web applications using **Java, Spring Boot, React.js, TypeScript**, and Node.js, delivering features that serve thousands of monthly active users with 99%+ uptime.
- Design and implement **RESTful APIs** and **microservices** on **AWS** (API Gateway, Lambda, EC2, S3, RDS), applying **cloud-native patterns** and cost-effective infrastructure strategies that helped reduce monthly cloud spend by **~15%** without impacting performance.
- Build **responsive, accessible UI** flows using **React.js, Next.js, Redux, Context API, HTML5**, and **CSS3**, improving key user journeys and reducing average page load time by **20-25%**.
- Own **technical planning and estimation** for features, breaking down epics into deliverable increments and helping the team consistently hit **sprint commitments in 90%** of iterations.
- Implement and maintain **GitHub-based CI/CD pipelines** with **GitHub Actions**, including automated build, test, lint, security scanning, and multi-environment deployments to **AWS**, cutting average deployment time from hours to **under 15 minutes**.
- Introduce **monitoring and observability** using **CloudWatch** logs and metrics, proactively addressing production issues, scalability bottlenecks, and technical debt and reducing repeated incidents by **~30%**.
- Collaborate daily with **offshore engineers** across time zones, aligning on **technical design, API contracts**, and delivery milestones through clear documentation and communication.

*MetLife, NJ
Software Engineer*

June 2024 - May 2025

- Developed and maintained enterprise-scale, consumer-facing applications using Java, Spring Boot, Angular, and Node.js, supporting high-volume traffic with strict SLAs around response time and availability.
- Built backend **microservices** with **Spring Boot** and **Node.js** that integrated with **Snowflake, Microsoft SQL Server**, and **MySQL**, improving critical API response times by **20-30%** through optimized queries and caching.
- Implemented **search and caching layers** using **Elasticsearch/OpenSearch** and **Redis** to reduce response times and improve throughput for high-traffic endpoints, cutting cacheable read load on the database by **~40%**.
- Developed **Angular single-page applications** using **TypeScript, RxJS, Angular CLI**, and **Angular Material**, implementing **reusable components, reactive forms**, and **route guards** that reduced duplicate frontend code by **~25%** across modules.
- Collaborated with architecture and infrastructure teams to design **cloud-native solutions on AWS**, including containerized services and API gateways, enforcing best practices around **resilience** and **fault tolerance**.
- Enhanced **CI/CD pipelines** in **GitHub (GitHub Actions)** for automated testing, static analysis, and **blue/green deployments**, reducing deployment failures and manual intervention and improving **release frequency** from monthly to bi-weekly.
- Partnered with security and compliance teams to align with **secure coding standards**, participate in **threat modeling**, and remediate vulnerabilities uncovered during audits and penetration testing.

- **Mentored junior engineers** on the team, pair-programming through complex tickets, reviewing designs, and sharing guidance on **system design** and **engineering best practices**, accelerating onboarding time for new engineers by **~30%**.
- Monitored **system performance and reliability** using **AWS CloudWatch**, application logs, and custom health checks, proactively resolving production issues and reducing recurring incidents through **root cause analysis** and targeted refactoring.

Tata Consultancy Services, India
Full Stack Developer

Sep 2020 – June 2023

- Delivered multiple full-stack web applications for enterprise clients using Java, Spring Boot, Node.js, Angular, and React.js, working across the full stack from database schema to frontend components for applications used by hundreds of internal and external users.
- Implemented and consumed **REST APIs** for large-scale systems, standardizing **error handling, logging, and API documentation**, which reduced integration-related defects in QA by **~20%**.
- Built modular, **reusable UI components** using **Angular, React.js, Redux, TypeScript, and CSS3**, enhancing **maintainability** and cutting new screen development time by **~30%**.
- Developed and maintained **Angular-based modules** for internal and customer-facing portals, leveraging **Angular CLI, RxJS, and Angular Material** to implement SPA navigation, **reactive forms**, and **data-driven dashboards**.
- Designed and optimized **database schemas** in **SQL Server** and **MySQL**, including stored procedures, indexes, and **query optimization** for performance and scalability.
- Integrated **Elasticsearch** and **Apache Solr** for **full-text search** experiences and analytics dashboards, improving discoverability and user experience in **consumer-facing** flows.
- Contributed to **AWS deployments** using **GitHub-based CI/CD pipelines**, helping define **branching strategies, code review checklists**, and deployment runbooks.
- Actively participated in **Agile** ceremonies and cross-functional collaboration with product managers, QA, and **offshore teams**, ensuring shared understanding of requirements and timely delivery.
- **Led small feature squads** on key releases, **mentoring junior developers** on **clean code, Git/GitHub workflows**, and **Agile delivery practices**, which improved on-time feature delivery for those squads to **~95%** of planned scope.

ATS Learning Solutions, India
Software Developer Intern

May 2018 – July 2018

- Built internal tools and student-facing features using Java, Spring MVC, and basic React.js components, gaining early exposure to full-stack development and improving internal workflows used daily by staff and students.
- Assisted senior engineers with **debugging, unit testing**, and refactoring legacy code to align with updated **coding standards** and design patterns, helping reduce regression bugs in key modules.
- Created simple dashboards with **HTML5, CSS3, and JavaScript** to surface metrics from a **MySQL** backend, reducing manual reporting effort for the team by **several hours per month**.
- Participated in **Agile ceremonies** (standups, sprint planning), learning how to break requirements into **user stories**, estimate effort, and deliver incremental features that aligned with senior engineers' **architecture** and **coding guidelines**.

EDUCATION

Master of Science Computer Science
New Jersey Institute of Technology

May 2025
Newark, NJ

Bachelor of Engineering in Information Technology
University of Mumbai

May 2020
Mumbai, India

PROJECTS

Predictive Modeling for Disease Classification

- Developed a CBC-based disease classification pipeline, applying feature engineering and model tuning with cross-validation for reliable performance.

AI Powered Resume and Cover Letter Toolkit

- Developed an AI-powered web application for analyzing and reviewing resumes by using Google Gemini AI and Open AI. By leveraging AI and natural language processing, it provides personalized feedback to improve resumes.

RESEARCH AND PUBLICATIONS

Classification of Diseases using CBC | Python, TensorFlow, Pandas, Matplotlib, Scikit-Learn, ANN, Data Mining

- Published in Springer Journal Soft Computing and Signal Processing Advances in Intelligent Systems and Computing, 2020 (DOI: 10.1007/978-981-16-1249-7_12)

CERTIFICATIONS & TRAINING

- Java IOT Developer - Oracle
- Oracle Certified CX Commerce Specialist – Oracle
- Python - Microsoft
