

Jasean Kumar Jayakumar

Business Intelligence Analyst

Grand Prairie, TX, USA | jaseankumar.jayakumar@gmail.com | +1 (945) 266-2088

SUMMARY

- Business Intelligence Analyst with 4+ years of experience delivering data-driven solutions across finance, operations, and logistics domains.
 - Designed and automated end-to-end ETL pipelines using Python and SQL, reducing manual data processing efforts and improving data reliability.
 - Built and maintained executive-level dashboards in Power BI and Tableau, enabling real-time tracking of KPIs and accelerating decision-making processes.
 - Collaborated with cross-functional teams to design scalable data models (Star and Snowflake) and integrate ERP/CRM systems for consolidated reporting.
 - Migrated legacy data infrastructure to AWS (Redshift, S3), improving performance and enabling seamless data access across departments.
 - Applied machine learning models to forecast revenue and churn, driving predictive analytics initiatives for strategic planning.
 - Bridged communication between technical teams and business users, ensuring data governance, compliance, and stakeholder alignment.
-

EXPERIENCE

Client: **State Street**, USA | **Business Intelligence Analyst**

Sep 2024 – Present

- Worked with cross-functional teams to capture business and technical requirements via JAD and RAD sessions.
- Coordinated with data engineering teams in designing dimensional models and ER diagrams specific to financial and operational data sets.
- Designed automated ETL processes utilizing Python and intricate SQL queries to transform EDI files for finance reporting.
- Utilized AWS Redshift as the hub warehouse for compliance reporting, speeding up queries and secure data access.
- Developed Power BI dashboards to combine financial and operational information, delivering actionable insights for the senior leadership.
- Implemented interactive executive dashboards based on DAX and Power Query to enable real-time KPI tracking.
- Validated data pipelines meeting financial rules and audit requirements by collaborating with the finance and compliance departments.
- Implemented automatic repetitive data validation tasks through Python, enhancing data accuracy and minimizing manual review processes.
- Conducted onboarding sessions for business teams on how to leverage Power BI self-service tools in fostering analytics adoption.
- Contributed to weekly sprint reviews and backlog grooming sessions in an Agile development environment.
- Mapped data flows and lineage to enable ongoing BI maintenance and scalability.

Client: **Streebo Inc**, India | **Business Intelligence Analyst**

Feb 2022 – Dec 2022

- Developed Business Requirement Documents (BRD) and Functional Requirement Documents (FRD) to aid Agile development cycles.
- Examined SAP SD module data for identifying inefficiencies in order processing and logistics processes.
- Suggested and implemented process improvements which enhanced the order-to-cash cycle performance.
- Developed star and snowflake schema data models to enable optimal querying and reporting on BI platforms.
- Created Power BI dashboards that integrated CRM and ERP data to track sales funnels and inventory levels.
- Performed data profiling and cleansing to ensure consistent and dependable datasets for reporting.
- Utilized Jira to manage tasks and Visio to diagram business process flows and data pipelines.
- Created data dictionaries and documentation to enhance knowledge across teams and future-proof improvements.
- Coordinated with business and IT users during UAT to validate reports against expectations prior to production deployment.
- Collaborated with QA teams to confirm data transformations and ensure correctness in final dashboards.

Client: **UL Technology Solutions Pvt Ltd**, India | **Data Analyst**

Oct 2019 – Jan 2022

- Wrote advanced SQL queries and stored procedures to pull and consolidate business data for ops and reporting teams.
- Created and managed ETL processes with SSIS and Talend to automate data integration from multiple sources.
- Developed machine learning models to predict business indicators like revenue and customer churn with Python and scikit-learn.
- Developed Tableau dashboards to provide insights to finance, sales, and operations teams to enhance decision-making time.
- Built a data warehouse with SSIS, SSAS, and SQL Server to integrate historical and transactional data.
- Applied R (ggplot2) for sophisticated data visualization in finance trend analysis and reporting.
- Ported legacy reports to the cloud-based architecture on AWS Redshift and S3 for greater accessibility.
- Automated periodic Excel and Tableau reports, reducing manual labor by a significant percentage and report turnaround time.
- Integrated API data feeds and third-party sources into core data repositories for better business analysis.
- Worked closely with stakeholders to establish KPIs and reconcile reporting measures across departments.
- Resolved data inconsistencies by working together with engineering and source system owners.

EDUCATION

Masters in Information Technology and Management Dallas Baptist University, Dallas, USA	Jan 2023-Dec 2024
Bachelors in Mechanical Engineering Bharat Institute of Engineering and Technology, Hyderabad, India	Jun 2015-Aug 2019

SKILLS

BI & Reporting Tools: Power BI, Tableau, Excel (Advanced), DAX, Power Query, SAP Crystal Reports, SSRS, OBIEE **Programming & Data Science:** Python, R, SQL, Numbly, Pandas, Jupiter Notebooks, SciPy, Machine Learning (scikit-learn) **Big Data Technologies:** Hadoop, Spark, Kafka, Hive, HBase, Pig **Cloud Platforms:** AWS (Redshift, S3, EC2), Azure (Azure Data Factory, Azure SQL), Google Cloud Platform (Big Query) **Agile & Development Tools:** Jira, Git, Docker, Jenkins, Confluence, Azure DevOps, CI/CD pipelines **Databases:** Oracle PL/SQL, MS SQL Server, MySQL, DB2, NoSQL (MongoDB) **ETL & Data Warehousing:** SSIS, SSAS, Data Modelling (OLTP, OLAP, Star & Snowflake schemas), Talent, Informatics **Other Technologies:** Visual Basic, ASP, C#.NET, SharePoint, REST APIs, XML, JSON

PROJECTS

Attendance Detection System Using OpenCV

- Designed and implemented a real-time attendance monitoring system using Python and OpenCV, aimed at automating manual roll call processes in classrooms.
- Employed Haar Cascade Classifiers and Local Binary Patterns Histograms (LBPH) for face detection and recognition, improving accuracy and speed in identifying enrolled students.
- Built a user-friendly interface to initiate scans, display real-time camera feeds, and log attendance data automatically into structured records.
- Integrated the system with SQLite to store and retrieve student profiles, attendance logs, and timestamps.
- Reduced manual errors and time spent on attendance tracking by over 90%, providing a scalable solution for educational institutions.

Client: State Street

Regulatory Insights Dashboard Suite

- Led BI efforts to build Power BI dashboards for Basel III compliance, capital adequacy, VaR, and stress testing metrics.
- Designed ETL workflows using Python and SQL to integrate data from SQL Server, Excel, and internal tools into AWS Redshift.
- Created DAX-driven visualizations, including a Risk Heatmap and KPI alerts for VaR breaches and liquidity thresholds.
- Enabled regulatory drill-downs by asset class, region, and department; improved audit readiness and reduced reporting time by 50%.
- Partnered with Compliance to validate metrics and conducted Power BI training for risk analysts to support self-service reporting.
