SUMMARY

Data driven professional with expertise in business analysis, data analytics. Skilled in analyzing large datasets, generating insights, and optimizing business strategies. Experience in building dashboards, automating workflows, and improving data pipelines for efficiency. Adept at collaborating with cross-functional teams, leveraging SQL, Python, and visualization tools to support business goals. Strong foundation in data modeling, ETL processes, and performance optimization for streamlined reporting and infrastructure.

EDUCATION

University of North Texas, Denton, TX

M.S in Computer Science

Aug 2023 - May 2025

- Relevant Courses : Fundamentals of DB, Big Data, Data Visualization, Machine Learning, Data Analytics

Birla Institute of Technology and Science, Hyderabad, India

B.E in Electronics & Communication Engineering

Aug 2018 - May 2022

- Relevant Courses : Web Development, Operating System, OOPS, Probability and Statistics, Signal Processing, Database Management, NLP, AI

TECHNICAL SKILLS & COMPETENCIES

Programming Languages :	SQL, Python (NumPy, Pandas), HTML, CSS, JavaScript
Tools :	Tableau, PowerBI, Excel, Linux ,MacOS, Jupyter Notebook, ETL, AWS
Big Data Ecosystem :	Big Data, Hadoop, MapReduce, Pig, Spark
Database Development :	MySQL, SQL Server, NoSQL
Statistics & Methods :	Linear Regression, Logistic Regression, K-means, NLP, A/B testing, Decision Tree, NLP
Certifications :	Google Data Analytics, Python for Data Analysis & visualization, ML : Python in Data Science, Full Stack Bootcamp

PROFESSIONAL EXPERIENCE

Business Analyst - Meesho, Bengaluru, India

Jun 2022 - May 2023

Demand-Supply Optimization & Business Insights

- Developed SQL-based views and data-driven algorithms to optimize demand and supply forecasting, enhancing decision-making
- Conducted exploratory data analysis (EDA) and trend analysis to generate actionable insights
- Built interactive dashboards (Power BI/Tableau) to visualize KPIs and support strategic planning
- Analyzed key business metrics and identified root causes of defects to improve processes
- Provided data-backed recommendations to optimize resource allocation and efficiency
- Collaborated with cross-functional teams to align objectives and improve customer service levels
- Researched and implemented cost-reduction strategies through data analysis and automation

OC Change RCA Framework (Orders Drop Analysis)

- Conducted root cause analysis (RCA) to identify factors causing a decline in order count across catalogs
- Developed interactive dashboards and SQL-based views to track key metrics (VC, T%, ASP, OC, UPS, UPD)
- Analyzed Amazon & Flipkart scraped data to compare product pricing and optimized Meesho's pricing strategy
- Implemented pricing adjustments, reduced shipping costs, and increased targeted campaigns to boost orders
- Optimized search terms and product displays to improve visibility and conversion rates
- Designed A/B experiments to analyze user behavior and derive data-driven insights for strategy improvements, leading to an 18% increase in OC
- Reduced returns and cancellations by 40% by offering special promotions and removing fraudulent suppliers

Sale Analysis & Optimization

- Conducted sale performance analysis using historical data to identify growth opportunities
- Developed segmentation strategies by categorizing catalogs into high-visibility and hidden items
- Increased high NMV (Net Merchandise Value) products, resulting in a 8% increase in profitability during sales
- Managed inventory forecasting to prevent stockouts of high-demand products, reducing stockout issues to 3%
- Identified common suppliers across e-commerce platforms and ran exclusive ad campaigns for them
- Implemented strategies to reduce returns and cancellations, improving overall platform profitability
- Provided data-driven insights to enhance sales strategies and revenue optimization

Customer Retention & Churn Analysis

- Conducted churn analysis using historical customer data to identify key drop-off reasons and reduced them to 5%
- Developed customer segmentation models based on behavior, purchase patterns, and engagement levels

Web Dev Intern - WILP, Hyderabad, India

Jul 2021 - Dec 2021

Design & Development of User Interface for Remotelab Deployment

- Designed wireframes and UI components for a responsive web interface enabling students to access remote lab experiments
- Developed student, faculty, and admin portals using HTML, CSS, and React.js, ensuring seamless interaction
- Built a Web RDP (Remote Desktop Protocol) interface to allow students to connect to remote lab servers via a web browser
- Collaborated with stakeholders to align UI/UX design with functional requirements for different user roles
- Optimized front-end performance and accessibility, enhancing user experience across devices
- Integrated real-time interaction features to improve remote experiment execution and monitoring

Strategy Execution & Operations in a Medical Startup

- Conducted user behavior analysis by building 3D models in Blender to study user expressions and profiles
- Assisted in product testing and validation, collaborating with engineers to ensure quality assurance
- Supported strategic decision-making by providing data-driven insights on product usability and adoption

PROJECTS

Data Analytics I

Impact of COVID-19 on the Housing Market

- Examined pre-pandemic, pandemic, and post-pandemic price fluctuations in the U.S. housing market
- Provided data-driven insights for real estate investors and homebuyers on market stability and growth
- Utilized statistical analysis and visualization tools to highlight price trends and investment opportunities

Software Engineering

Heuristic Puzzle Forge – UI/UX Learning Game

- Developed an interactive gaming website to help students and developers learn UI/UX design through gameplay
- Implemented React.js and modern UI frameworks to create a responsive and dynamic user experience
- Integrated game mechanics that encourage strategy, creativity, and user engagement
- Deployed the application using Netlify, ensuring seamless accessibility and performance

Campaign Title Extraction from GoFundMe

- Conducted client-side web scraping to extract campaign titles
- Selected campaign title elements based on CSS classes. Extracted and stored text data in an array for further analysis
- Executed JavaScript code in the browser console to automate data extraction

Scientific Data Visualization

E-Commerce Data Analysis & Visualization

- Collected & processed three e-commerce datasets (customers, sales, and demographics) from Kaggle
- Cleaned data using Python (Pandas library) by removing empty cells for accurate analysis
- Identified common attributes across datasets and merged them into a CSV file for structured analysis. Converted data into JSON format to enable advanced visualizations in D3.js
- Developed interactive visualizations using Python, D3.js, and Tableau to uncover key insights
- Analyzed customer behavior, sales trends, and demographic impact to optimize business strategies

Object Oriented Programming

E-Commerce Application Development

- Developed a Flutter-based mobile app to connect wholesale shopkeepers with customers for online grocery ordering and delivery
- Utilized Flutter's cross-platform capabilities to support Android, iOS, Web, and desktop environments from a single codebase
- Integrated Firebase backend for real-time data synchronization and Google Location APIs for geolocation-based services

Machine Learning

Models in Machine Learning

- Processed raw data and performed feature engineering for improved model accuracy
- Conducted comparative analysis of model performance using evaluation metrics (accuracy, precision, recall, F1-score)
- Utilized Python (NumPy, Pandas) for model development and evaluation
