

JATIN MILIND BHANGAONKAR

Power BI | Tableau Developer | Azure MS SQL BI Developer | BI Developer / Data Analyst
Jersey City, NJ, 07307 | jbhangaonkar@gmail.com | (475) 301-8592

PROFESSIONAL SUMMARY

- Results-driven Data Analyst / Business Intelligence Developer with over 5 years of experience delivering enterprise-level data analytics and visualization solutions across healthcare and financial services domains.
- Proven ability to design, build, and deploy Power BI and Tableau dashboards that transform complex datasets into actionable insights for senior leadership and business users.
- Strong expertise in Microsoft Azure ecosystem including Azure Data Factory (ADF), Azure SQL Database, Azure Synapse, and Data Lake for end-to-end data pipeline development and analytics delivery.
- Leveraged Power BI semantic models as a shared dataset source for Paginated Reports to ensure consistency between dashboards and detail reports.
- Skilled in developing and optimizing SQL stored procedures, views, and data models, enabling high-performance query execution and data accuracy across multi-source systems.
- Hands-on experience with Python (Pandas, NumPy, Matplotlib, Seaborn) for statistical modeling, data cleaning, and advanced data analysis to enhance BI insights.
- Designed and implemented data models and star/snowflake schemas supporting large-scale BI reporting and real-time performance metrics.
- Collaborated with business teams to translate static Excel-based reports into dynamic, interactive Paginated Reports with drill-through and filtering functionality.
- Automated data extraction, transformation, and refresh cycles using ADF, SQL Server Integration Services (SSIS), and Power BI Service scheduling.
- Collaborated with stakeholders across business, data engineering, and compliance teams to define KPIs, standardize data definitions, and ensure consistent analytics reporting.
- Implemented role-based access (RLS), data validation frameworks, and governance standards to maintain data integrity and compliance across Power BI environments.
- Delivered measurable improvements in dashboard performance, reporting accuracy, and cross-platform data availability using Python-enhanced automation and Azure-based data pipelines.
- Recognized for combining strong technical expertise with analytical thinking, enabling business units to make data-informed strategic and operational decisions.

TECHNICAL SKILLS

Business Intelligence & Visualization	Power BI (Desktop, Service, Gateway), Tableau (Desktop, Server, Prep), Power Query (M), DAX, KPI Design, Dashboard Performance Optimization, Data Storytelling
Programming & Analytics	Python (Pandas, NumPy, Matplotlib, Seaborn), T-SQL, DAX, Power Query M, Statistical Modeling, Forecasting, Data Wrangling
Cloud Platforms	Microsoft Azure (Data Factory, Synapse Analytics, SQL Database, Data Lake, Blob Storage, Logic Apps, Power Platform), Azure DevOps
Databases & Data Warehousing	SQL Server, Azure SQL Database, Oracle, Snowflake, Data Lake Storage, Dimensional Modeling (Star/Snowflake Schema)
Data Integration & ETL	Azure Data Factory (ADF), SQL Server Integration Services (SSIS), Python ETL Automation, Power Automate, Data Ingestion Pipelines
Reporting & Analytics Domains	Healthcare Analytics, Clinical & Pharmaceutical Data Reporting, Financial BI, Regulatory Compliance Reporting, Client Performance Analytics
Performance Optimization	Query Optimization, Indexing, Partitioning, DAX Calculation Optimization, Incremental Refresh, Report Load Time Reduction
Governance & Compliance	Data Quality Management, HIPAA Compliance, SOX Reporting, Role-Based Access Control (RLS), Metadata Documentation, Data Lineage
Version Control & Collaboration	Git, Azure Repos, JIRA, Confluence, Agile (Scrum), CI/CD Deployment Pipelines
Tools & Utilities	Excel (Power Pivot, Macros, Pivot Tables), SSRS, Power Automate, PowerShell, MS Visio, Advanced Excel Formulas, Tableau Prep

WORK EXPERIENCE

Power BI Developer/Azure MS SQL BI Developer

Broadridge Financial Solutions – Newark, NJ | Jul 2024 - Present

Broadridge launched a data modernization and analytics transformation program to migrate legacy BI systems to the Azure cloud ecosystem. The initiative focused on integrating financial, trading, and client reporting data into a unified data warehouse leveraging Azure Data Factory, Azure Synapse, and Power BI for real-time analytics and strategic insights.

As a Power BI Developer and Azure MS SQL BI Developer, I lead the design and development of scalable BI solutions that deliver high-impact insights across Finance, Operations, and Compliance departments. My role involves building data pipelines, modeling transactional datasets, and delivering Python-enhanced analytics through automated, governed Power BI solutions.

Responsibilities:

- Designed and implemented complex Power BI dashboards visualizing financial performance metrics, client profitability, transaction patterns, and compliance KPIs across business units.
- Designed, developed, and deployed Paginated Reports using Power BI Report Builder for financial, operational, and compliance reporting across multiple business units.
- Built and maintained ETL pipelines in Azure Data Factory (ADF) to orchestrate ingestion and transformation of high-volume data from SQL Server, flat files, APIs, and SAP sources.
- Engineered Azure SQL data models, stored procedures, functions, and views optimized for analytical queries, reducing report latency and improving refresh reliability.
- Developed and scheduled Python-based data preprocessing and validation scripts (Pandas, NumPy, Matplotlib) to cleanse, transform, and enrich financial datasets.
- Integrated Azure Synapse Analytics for high-performance query execution and analytical workloads over large transactional datasets.
- Implemented Role-Based Security (RLS) and row-level permission controls in Power BI Service ensuring strict compliance with data governance policies.
- Designed DAX measures and calculated columns to support financial KPIs such as revenue growth, cost-to-income ratio, and transaction-level profitability.
- Created parameterized SSRS reports for compliance and risk management teams to support SOX and audit documentation.
- Collaborated with Azure administrators to fine-tune pipeline concurrency, trigger configurations, and data refresh schedules within ADF and Synapse environments.
- Utilized Azure Data Lake and Blob Storage for staging and incremental data loads, enabling seamless integration into downstream Power BI reports.
- Partnered with data architects to define star/snowflake schemas, ensuring consistent and scalable BI data models across reporting domains.
- Provided Power BI adoption training and documentation for business users, promoting self-service analytics and dashboard usage.
- Conducted UAT sessions, performance tuning, and DAX optimization, improving dashboard refresh time by up to 40%.
- Collaborated with global stakeholders in Agile sprints to prioritize enhancements, manage releases, and align deliverables with enterprise data strategy.

Environment: *Power BI (Desktop, Service, Gateway), Azure Data Factory (ADF), Azure Synapse Analytics, Azure SQL Database, Azure Data Lake, SSRS, SQL Server 2019, Python (Pandas, NumPy, Matplotlib, Seaborn), DAX, Power Query (M), Git, Excel, Power Automate, Agile (Scrum), CI/CD Pipelines, Data Governance Frameworks*

BI Developer / Data Analyst

IQVIA – Ahmedabad, India | Feb 2019 – Jul 2022

IQVIA initiated a data analytics modernization program to enhance pharmaceutical sales intelligence, patient outcomes analytics, and clinical data reporting for major life science clients. The project focused on migrating analytical workflows to Azure cloud, integrating data from multiple healthcare systems, and building self-service BI dashboards using Power BI and Tableau.

Responsibilities:

- Designed and developed Power BI and Tableau dashboards for pharmaceutical sales analytics, drug utilization trends, and clinical study outcomes.
- Migrated legacy SSRS reports to Power BI Paginated Reports, modernizing report delivery under the Power BI Premium capacity environment.
- Wrote complex SQL queries, stored procedures, and joins to extract, clean, and aggregate large datasets from multiple relational databases.
- Developed ETL pipelines in Azure Data Factory (ADF) for integrating and transforming healthcare data from flat files, APIs, and SQL Server.
- Created data models and star schemas in Azure SQL Database to support efficient BI reporting and visualization layers.
- Used Python (Pandas, NumPy, Matplotlib, Seaborn) for statistical analysis, data wrangling, and building forecasting models for patient adherence and sales trends.
- Partnered with the global data science team to operationalize predictive models by integrating Python outputs into Power BI reports.
- Collaborated with stakeholders to define KPIs and performance metrics for clinical operations and commercial analytics dashboards.
- Performed data validation, QA testing, and reconciliation to ensure consistency across cloud and on-premise data sources.
- Configured role-based access (RLS) and automated data refresh schedules in Power BI Service.
- Documented business rules, data lineage, and technical mappings to support governance and compliance requirements.
- Conducted UAT sessions and stakeholder walkthroughs to validate analytics accuracy and visualization usability.
- Improved dashboard performance by optimizing SQL queries, aggregations, and DAX measures.

Environment: *Power BI, Tableau, Azure Data Factory (ADF), Azure SQL Database, SQL Server, Python (Pandas, NumPy, Matplotlib, Seaborn), DAX, Power Query (M), Excel, SSMS, Git, JIRA, Agile (Scrum), Data Governance & HIPAA Frameworks*

EDUCATION

- Master of Science, Business Analytics, University of New Haven
- Bachelor of Engineering, Computer Engineering, University of Mumbai
