

Hemasri Polavarapu

Java Developer

G-Mail: hemasripolavarapu67@gmail.com

Contact: [779-246-7547](tel:779-246-7547)

PROFESSIONAL SUMMARY:

- Highly skilled and motivated Java Developer with over 5+ Years of experience specializing in Java 8–17, Spring Boot, and Spring-based frameworks. Extensive experience in developing scalable and secure web applications with RESTful APIs, Spring Security, Hibernate/JPA, and databases such as MySQL, PostgreSQL, and MongoDB. Proficient in using CI/CD tools like Jenkins, GitLab, and version control systems (Git). Experienced in cloud environments such as AWS and Azure. Adept at working in Agile/Scrum teams and following TDD principles to ensure high-quality deliverables.
- Designed, developed, and maintained scalable backend services using **Java (8–17)** and **Spring Boot** frameworks, ensuring high availability and performance for enterprise applications.
- Developed and exposed **RESTful APIs** for various microservices, integrated third-party services, and implemented API security using **Spring Security** and **JWT/OAuth**.
- Worked extensively with relational and NoSQL databases, including **MySQL**, **PostgreSQL**, **Oracle**, and **MongoDB**, optimizing queries and ensuring data consistency and integrity.
- Managed cloud-based infrastructure on **AWS (EC2, S3, RDS)** and **Azure (App Services, Azure SQL)**, ensuring scalable and cost-effective solutions.
- Automated build, testing, and deployment workflows using **Jenkins**, **GitLab CI/CD**, and **Maven/Gradle**, reducing manual intervention and improving deployment efficiency.
- Integrated **Spring Security** for user authentication and authorization, applied best practices for securing web applications, and ensured compliance with data protection standards.
- Wrote unit and integration tests using **JUnit** and **Mockito** frameworks, conducted manual and automated API testing with **Postman**, and improved test coverage to ensure robust, bug-free code.
- Implemented logging and monitoring solutions using **Log4j**, **ELK Stack**, and **Prometheus**, providing real-time insights into application performance and error tracking.
- Worked in **Agile/Scrum** teams, participating in sprint planning, daily stand-ups, and retrospectives, ensuring timely delivery of high-quality software.
- Actively participated in peer code reviews, collaborating with frontend developers, product managers, and quality assurance teams to ensure seamless integration and delivery of features.
- Created comprehensive technical documentation for APIs using **Swagger** and maintained clear, concise code comments to enhance maintainability and facilitate team collaboration.
- Kept up to date with the latest industry trends and Java technologies, mentoring junior developers, and sharing best practices within the team.

TECHNICAL SKILLS:

Languages: Java (8–17), JavaScript, HTML5, CSS3, JSP

Frameworks/Technologies: Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, RESTful APIs, Thymeleaf

Databases: MySQL, PostgreSQL, Oracle, MongoDB, JDBC

Tools: Maven, Gradle, IntelliJ IDEA, Eclipse, VS Code, Jira

Cloud Platforms: AWS (EC2, S3, RDS), Azure (App Services, Azure SQL)

CI/CD Tools: Git, GitHub, GitLab CI/CD, Jenkins

Testing Frameworks: JUnit, Mockito, Postman, Swagger

Logging & Monitoring: Log4j, ELK Stack, Prometheus

Version Control: Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE:

IT Induct / Fed EX, Hyderabad, India || May 2024 to Present

Role: Java Developer

Responsibilities:

- Designed and developed **microservices** using **Spring Boot** and **Spring Security**, ensuring security with JWT and OAuth-based authentication.
- Created **RESTful APIs** and integrated them with **MySQL** and **MongoDB** databases, optimizing SQL queries to reduce latency.
- Built CI/CD pipelines using **Jenkins** and **GitLab CI/CD**, automating build and deployment processes across multiple environments.
- Led the migration of legacy applications to **AWS (EC2, S3, RDS)**, reducing infrastructure costs and improving scalability.
- Wrote unit and integration tests using **JUnit**, **Mockito**, and **Postman**, improving code coverage and reducing defects in production.
- Integrated **Swagger** for API documentation, allowing for improved collaboration and streamlined client development.
- Developed and maintained **Spring Boot** based services that processed and stored large data sets from external systems, using **PostgreSQL** and **Oracle** databases.
- Led the design and implementation of **JSP**-based front-end views and **Thymeleaf** templates, improving the responsiveness and performance of user interfaces.
- Implemented logging and monitoring using **Log4j** and the **ELK Stack**, providing real-time insights into application behavior and reducing downtime.
- Automated build and deployment processes with **Maven** and **Gradle**, streamlining workflows and improving team productivity.
- Participated in **Agile** sprint planning, daily stand-ups, and retrospectives, ensuring alignment with project goals and timelines.
- Built a scalable inventory management system using **Spring Boot** and **AWS RDS**. The system handled over transactions per day and provided an intuitive **JSP**-based front-end.
- Implemented **RESTful APIs** to manage inventory items and track orders in real-time. Used **PostgreSQL** as the database and optimized performance with custom SQL indexing.
- Developed and deployed a cloud-based e-commerce application hosted on **Azure** with **App Services** and **Azure SQL Database**.
- Designed **Spring Boot** microservices for product management, user accounts, and order processing, integrated with **MongoDB** for scalable storage.

Environment: Java, Spring Boot, Spring Security, AWS, Azure, MySQL, MongoDB, PostgreSQL, Oracle, Jenkins, GitLab CI/CD, Maven, Gradle, JUnit, Mockito, Postman, Log4j, ELK Stack, Swagger, Thymeleaf, JSP

TCS/ GE Healthcare , Hyderabad , India || Dec 2021 – Aug 2023

Role: Java Full-Stack Developer

Responsibilities:

- Developed and maintained secure **healthcare** microservices for **insurance claims** lifecycle using **Java 17** and **Spring Boot**, ensuring compliance with HIPAA and data protection norms.
- Designed **RESTful** and **SOAP-based APIs** for end-to-end claims workflows including intake, eligibility validation, adjudication, and reimbursement, enabling seamless integration with provider systems.
- Implemented **HL7** and **FHIR-compliant APIs** to facilitate interoperability between payers, hospitals, and third-party administrators, improving data exchange and reducing manual interventions.

- Applied **Spring Security** with **OAuth2** and **JWT** to enforce **RBAC** across claims processors, underwriters, and support staff, ensuring secure access to member and policy data.
- Enabled **AES-256 encryption**, **audit logging**, and access control policies to meet HIPAA and HITRUST compliance requirements for sensitive healthcare transactions
- Migrated over **20 legacy J2EE modules to Spring Boot microservices**, reducing technical debt and improving system scalability and maintainability by **25%**.
- Optimized backend adjudication engine using **Java Streams**, **Executor Service**, and **Collections API**, resulting in **40% faster** claim throughput under peak load.
- Built fault-tolerant **Spring Batch** jobs for bulk processing of EDI 837/835 claim files with retry logic, skip policies, and audit trail integration.
- Developed **Angular-based dashboards** using **TypeScript** and **Bootstrap** for claims managers and support teams, providing real-time visibility into claim statuses and SLA metrics.
- Integrated **RabbitMQ** for asynchronous messaging across modules such as claim approval, payment notification, and member alerts, improving system responsiveness and decoupling.
- Tuned backend queries, implemented **Redis caching**, and enabled **Angular lazy loading** to improve claims workflow performance by **35%**.
- Designed normalized schemas in **Oracle** and **PostgreSQL** to handle high-volume transactional data for claims, members, and providers with referential integrity and indexing.
- Utilized **MongoDB** for storing unstructured healthcare documents like scanned prescriptions, medical bills, and supporting attachments.
- Maintained backward compatibility with legacy **MySQL** systems during phased migration, ensuring data consistency across multiple databases.
- Configured **Splunk dashboards** and alerts for monitoring **API latency**, error rates, and security violations; integrated with **AWS CloudWatch** for unified observability.
- Automated **CI/CD pipelines** using **Maven**, **Jenkins**, **Docker**, and **GitHub Actions**, reducing deployment time from 2 hours to under **10 minutes** with zero downtime.
- Deployed microservices on **AWS (EC2, S3, RDS, IAM)** with auto-scaling, multi-AZ failover, and disaster recovery strategies to ensure high availability.
- Enforced secure coding practices using **SonarQube** and achieved 85%+ unit and integration test coverage using **JUnit**, **Mockito**, and **TestNG**.
- Documented APIs using **Swagger/OpenAPI** and validated endpoints with **Postman**, enabling smooth QA automation and faster onboarding for new developers.
- Followed **Agile Scrum methodology**, actively participating in sprint planning, daily stand-ups, and retrospectives with **cross-functional teams including UI, backend, QA, and DevOps**.

Environment: Java 17, Spring Boot, RESTful APIs, SOAP, HL7, FHIR, OAuth2, JWT, AES-256, J2EE, Spring Security, Spring Batch, Angular, TypeScript, Bootstrap, RabbitMQ, Redis, Oracle, PostgreSQL, MongoDB, MySQL, Splunk, AWS (EC2, S3, RDS, IAM, CloudWatch), Maven, Jenkins, Docker, GitHub Actions, SonarQube, JUnit, Mockito, TestNG, Swagger, Postman, Agile Scrum

Lince Soft, Hyderabad, INDIA || Jan 2019 to Dec 2021

Role: Java Developer

Responsibilities:

- Developed and maintained **microservices** using **Spring Boot** and **Spring Security** for secure and scalable backend systems.
- Built **RESTful APIs** to manage key application functions like user management, authentication, and data processing.

- Integrated third-party APIs and internal services with **PostgreSQL** and **MongoDB**, optimizing database queries for faster performance.
- Utilized **JUnit** and **Mockito** for writing unit and integration tests, improving test coverage ensuring robust functionality in production.
- Worked with **AWS (EC2, S3, RDS)** for hosting services, and **Azure** for deploying cloud-native applications, improving the application's availability and scalability.
- Implemented **CI/CD pipelines** using **Jenkins** and **GitLab CI/CD**, automating testing, builds, and deployments, reducing release cycle
- Leveraged **Swagger** for API documentation, allowing better collaboration between frontend and backend teams.
- Integrated **Log4j** for logging, and set up **ELK Stack** for centralized logging, improving monitoring and debugging capabilities.
- Developed web applications with **Spring Boot**, implementing features like user authentication, data processing, and reporting.
- Designed and optimized database schemas in **MySQL** and **PostgreSQL** to handle high-traffic loads with minimal latency.
- Used **JSP**, **Thymeleaf**, and **JavaScript** to create responsive and user-friendly front-end templates and dynamic views.
- Automated application builds and deployments using **Maven**, **Gradle**, and **GitLab CI/CD**, leading to faster release cycles and better version control.
- Participated in the full software development lifecycle (SDLC), from requirement analysis to deployment and support.
- Integrated cloud storage using **AWS S3** for file management and **AWS RDS** for database hosting, ensuring a secure and cost-effective infrastructure

Environment: Spring Boot, Spring Security, PostgreSQL, MongoDB, AWS (EC2, S3, RDS), Azure, JUnit, Mockito, Jenkins, GitLab CI/CD, Swagger, Log4j, ELK Stack, JSP, Thymeleaf, JavaScript, Maven, Gradle
