

Pavan Kumar Vinjamuri

Java Full Stack Developer / AWS Certified

pavankumarvinjamuri584@gmail.com / 7204537665 / [linkedin.com/in/pk-vinja/](https://www.linkedin.com/in/pk-vinja/) / github.com/PavanKumar-sudo

PROFESSIONAL SUMMARY

- Over five years of extensive experience developing scalable enterprise applications using **Core Java, J2EE, Spring Boot, Hibernate**, and **microservices architecture**, deployed on **AWS, Azure**.
- Skilled in front-end technologies including **AngularJS, ReactJS, HTML5, CSS3, JavaScript (ES6+), TypeScript**, and **SASS**, building responsive, user-friendly web applications optimized for multiple devices.
- Proficient in designing and implementing **RESTful APIs, SOAP web services**, and integrating third-party services, ensuring robust, secure communication using **OAuth2, JWT**, and **Spring Security**.
- Expert in database design, development, and optimization using **Oracle, SQL Server, MongoDB, PL/SQL**, and **NoSQL**, ensuring efficient data retrieval and management for high-volume transactional systems.
- Experienced in Agile and Scrum methodologies, collaborating closely with cross-functional teams including product owners, QA, and UX designers to deliver business-critical features efficiently.
- Proficient in unit and integration testing using **JUnit, Mockito, Cucumber**, and end-to-end testing with **Selenium WebDriver** and **Cypress**, ensuring high-quality, bug-free releases.
- Experienced in cloud platform services such as **AWS EC2, S3, RDS, Azure AKS**, and **Google Cloud Storage**, configuring environments for secure and cost-effective deployments.
- Excellent communication and leadership abilities, mentoring junior developers and conducting technical workshops to promote best practices and foster team collaboration.
- Deep understanding of security best practices including data encryption, secure coding, and vulnerability assessments to safeguard applications against threats and compliance violations.

TECHNICAL SKILLS

- **Languages:** Java, J2EE, HTML, CSS, SQL, PL/SQL, TypeScript, JavaScript (ES6+), Shell scripting
- **Operating Systems & Servers:** Windows, UNIX, Linux, Apache Tomcat, JBOSS
- **Frameworks & Java Technologies:** Core Java, Spring Boot, Spring MVC, Spring Security, Hibernate, JSP, Servlets, JMS, Junit
- **Development Tools:** Jenkins, GitHub Action CI, Maven, Docker, Kubernetes, Terraform, Ansible, Eclipse, IntelliJ IDEA, Visual Studio Code, Postman, JIRA, Confluence
- **Web & Frontend:** HTML5, CSS3, Angular, ReactJS, AJAX, jQuery, Bootstrap
- **Databases & Cloud Platforms:** Oracle, SQL Server, NoSQL databases, PostgreSQL, AWS, Azure.
- **Version Control & Build Tool:** SVN, Git, CVS, ClearCase, VSS, Maven, Gradle
- **Testing & Monitoring Tools:** JUnit, Mockito, TestNG, Selenium WebDriver, Cucumber, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

Client: BMO Harris Bank , Denver CO

AUG 2024 to May 2025

Java Full Stack Developer

- Delivered Full-stack banking features by developing secure backend microservices in **Java 17, Spring Boot, Hibernate**, with **JWT** authentication and role-based access control, ensuring compliance with banking security standards.

- Built RESTful APIs with **OAuth 2.0, JWT** for internal and partner integrations, tested via **Postman**, and deployed services to **AWS Kubernetes(EKS)** with High Availability and auto-scaling.
- Designed responsive front-end components in **Angular, HTML5, CSS3**, including dynamic dropdowns, buttons and API integrations, Hosting UI on **AWS S3** for scalable delivery
- Developed **AWS Lambda functions** to handle asynchronous processing and event-driven workflows, reducing backend load and improving response times for banking services.
- Managed daily **JIRA** backlog—analyzing tickets, implementing code changes, performing peer reviews, and updating progress for Agile sprints.
- Managed transactional data using **MySQL on AWS RDS**, optimizing complex queries and indexing strategies to improve performance in high-frequency banking operations.
- Configured CI/CD pipelines with **Jenkins, Maven, Terraform, and Ansible**, automating Kubernetes deployments and reducing **provisioning time by 40%**.
- Conducted unit and integration testing using **JUnit** and **Mockito**, ensuring code coverage and stability before release.
- Implemented application performance monitoring using **Prometheus** and created custom **Grafana** dashboards, reducing **MTTR by 25%**.
- Troubleshoot and resolved complex production issues by analyzing logs, **debugging Java code**, and optimizing infrastructure configurations, improving application stability and customer satisfaction.

Client: Renault Nissan Technology and business center(RNTBCI), Chennai, India

JAN 2021 to DEC 2022

Java Full Stack Developer

- Designed and implemented backend customization in Windchill PLM using **Java 14/J2EE, JSP , Servlets, Apache Struts**, and **Spring** to meet specific automobile business requirements.
- Developed and enhanced UI components with HTML, CSS, ReactJS, and jQuery to improve usability and responsiveness.
- Wrote and optimized **SQL queries, PL/SQL procedures**, and **triggers** in Oracle Database to support data extraction, reporting, and performance tuning.
- Managed deployments on **Apache Tomcat using Ant and Maven**, ensuring smooth integration of new features with minimal downtime.
- Utilized **Git** for version control and **JIRA** for defect tracking, maintaining clear documentation and traceability of changes.
- Secured RESTful APIs with **Spring Security, OAuth 2.0**, and **JWT**, ensuring multi-layered authentication and authorization across distributed systems handling sensitive data.
- Played a key role in migrating Windchill PLM from **on-premises to AWS Cloud**, including **Oracle Database** migration to **Amazon RDS**, Tomcat application server setup, and configuration updates for seamless integration.
- Configured AWS infrastructure for **PLM application hosting**, ensuring performance optimization and scalability in the cloud.
- Monitored **application logs, scheduled background jobs, and queue managers** daily to ensure system stability and resolve runtime issues proactively.
- Assisted in **technical documentation** for new features, configurations, and deployment to support knowledge sharing.
- Participated in stand-ups, **sprint planning**, and code reviews as part of **Agile development**, ensuring continuous delivery.
- Provided **production support** during **critical incidents**, performing analysis and implementing fixes to prevent recurrence.
- Automated build and deployment workflows using **Jenkins** integrated with **GitLab CI/CD**, reducing manual errors and speeding up the release cycles for critical banking features.

- Created comprehensive automated test suites using **JUnit**, **Mockito**, and **Cucumber**, significantly increasing test coverage and catching defects early in the development lifecycle.

Client: CVS Health, Hyderabad, India

JAN 2018 to DEC 2020

Java Full Stack Developer

- Developed secure healthcare **claim-processing APIs in Spring Boot**, integrated with insurance providers, and deployed on **Microsoft Azure** for high availability.
- Designed and implemented secure **RESTful APIs and SOAP** services for integration with legacy systems and external partners, leveraging **Spring MVC**.
- Built and enhanced dynamic UI components using **Angular 5**, **HTML5**, and **CSS3** for prescription claim tracking and workflows.
- Integrated UI with backend APIs for real-time data updates, improving load time **by 15%**.
- Implemented **healthcare compliance standards (HIPAA)** in API design, data storage, and cloud deployments by incorporating data encryption, secure authentication, role-based access control, and logging for audit trails.
- Managed microservices lifecycle with **Docker** containerization and orchestrated deployments on **Kubernetes** clusters, improving system scalability and facilitating continuous delivery pipelines.
- Developed automation scripts using **Shell scripting** and integrated CI/CD pipelines with **Jenkins** and **Git**, ensuring efficient build, test, and deployment cycles across teams.
- Implemented real-time messaging and event-driven communication between microservices using **Apache Kafka** and **RabbitMQ**, enhancing fault tolerance and asynchronous processing capabilities.
- Optimized database schemas and queries in **PostgreSQL**, achieving improved transaction speeds and data integrity.
- Applied comprehensive unit and integration testing strategies using **JUnit**, **Mockito**, and **Selenium WebDriver**, improving code quality and reducing defect rates in critical health applications.
- Followed **Agile Scrum methodology**, actively participating in sprint planning, backlog refinement, and retrospectives, fostering collaborative environments with product owners, QA, and other stakeholders.

EDUCATION

Master of Science in Computer Science

University of Colorado Denver, Denver, USA

CERTIFICATION

- AWS Certified Solution Architect – Associate
- AWS Certified Cloud Practitioner
- IBM Full Stack Software Developer Professional Certificate (V5) – Coursera
- Git and GitHub Essentials – Coursera
