SUMMARY

Skilled and dedicated Computer Science graduate with experience in Full Stack Development and Data Science. Proven ability to contribute to projects effectively, utilizing various technologies and frameworks. Strong problem-solving skills and a passion for continuous learning.

EDUCATION

Saint Louis University • Master's Degree Graduation: May 2025
Masters in Computer Science • GPA: 3.74/4

Sreenidhi Institute of Science and Technology • Bachelor's Degree Graduation: June 2022
B.Tech in Electronics & Communication Engineering • GPA: 3.41/4

EXPERIENCE

Wipro Limited – Project Engineer July 2022 – July 2023
Hyderabad, India

- Engineered full-stack applications for FedEx Services, designing and deploying systems to efficiently capture, store, and process package data, optimizing route planning and logistics.
- Optimized system performance, enhancing workflow efficiency and reducing processing times by 25% through industry best practices.
- Collaborated with cross-functional teams, including product managers and QA specialists, to align project goals and deliver user-centric software solutions within tight deadlines.
- Orchestrated end-to-end SDLC processes, from requirement analysis and system design to testing and deployment, ensuring high-quality software delivery.
- Strengthened code reliability by developing robust JUnit test suites and leveraging Mockito to simulate real-world scenarios, improving test coverage and CI/CD integration.
- Designed and optimized relational database schemas in MySQL, executing complex SQL queries to maintain transactional integrity and enhance data retrieval performance.
- Implemented Swagger for API documentation and testing, streamlining debugging, improving RESTful endpoint validation, and ensuring seamless backend service integration.

Simplilearn – Full Stack Development Apprentice Mar. 2022 – May 2022

- Designed and built a responsive online food delivery platform from the ground up, allowing users to place and track orders in real time, with clear attention to user experience and functionality.
- Employed SpringBoot, Bootstrap, and AngularJS frameworks to develop a dynamic interface, contributing to high user satisfaction and engagement by refining usability through iterative feedback.
- Developed and integrated RESTful web services using Spring Boot, ensuring seamless communication between the frontend and backend while adhering to HTTP standards for efficient request handling.
- Conducted extensive cross-device and cross-browser testing to ensure platform reliability and maintained organized documentation, achieving a 100% compatibility rate across platforms.

PROJECTS

Haven of Grace - Client and Health Management System Global Grad Project May 2024 – August 2024

- Designed and deployed a live client, maternal, and child management system on a web server (at <https://www.havenofgracedata.org>) with forms for capturing demographic details.
- Added dynamic JavaScript features for managing child detail sections and integrated modals for seamless data editing.
- Leveraged MongoDB for efficient handling of complex data structures and enhanced security with robust authentication and error management.

Dots and Boxes Game Using Java GUI Course Project oct. 2023 – Dec. 2023

- Designed and implemented the Dots and Boxes game using Java Swing, featuring an interactive GUI for real-time gameplay. This was done as part of the course "Object Oriented Software Design(OOSD)" applying several Object-oriented design principles.
- Developed core game logic, including turn-based player mechanics, automatic line drawing, and score tracking.
- Applied Model-View-Controller (MVC) architecture to separate game logic, UI rendering, and user interactions, ensuring scalability and maintainability.
- Followed design pattern principles such as Observer Pattern for UI updates code modularity and reusability.

BWorks - Material Donor Mutual Assist Course Group Project Jan. 2023 – May 2023

- Developed a MERN stack donor engagement system to streamline communication, tracking donations from initiation to end-use and boosting engagement.

- Implemented automated follow-ups via Amazon SES, keeping donors informed and enhancing retention.
- Defined key metrics with stakeholders and built a user-friendly interface for tracking conversion rates and generating donor insights.
- Incorporated security best practices, implementing data encryption for sensitive donor information and using SSL/TLS certificates to ensure secure communication between the frontend and backend.

TECHNICAL SKILLS

- **Languages:** Java, Python, C, JavaScript, TypeScript
- **Web Development:** SpringBoot, Angular, React, Node.js, HTML5, CSS, Bootstrap, Flask
- **Database Management:** SQL, MongoDB
- **Other Tools:** Git, Jenkins, Gradle, Docker, Splunk, Eclipse, Bash, Microsoft Word, Excel, PowerPoint

SOFT SKILLS

- **Communication:** Excellent verbal and written communication abilities that effectively convey information, ensuring a clear understanding of policies and procedures for smooth operations.
- **Customer Service:** Committed to providing exceptional service to ensure positive experiences, fostering loyalty and satisfaction.
- **Organization:** Skilled at handling multiple priorities and meeting deadlines efficiently.
- **Team Work:** Proven ability to collaborate effectively and foster productive relationships.
- **Problem Solving:** Strong analytical skills with a systematic approach to identifying and resolving challenges, improving efficiency and outcomes.

CERTIFICATIONS

- **Simplilearn:** Java Full Stack Development
- **AWS:** Certified Cloud Practitioner
- **Google Cloud:** Introduction to Generative AI
- **Cisco:** CCNA - Introduction to Networks, Introduction to CyberSecurity, CyberSecurity Essentials
- **Internshala:** Introduction to Machine Learning Algorithms
- **HackerRank:** Problem Solving using Python

PUBLICATIONS

- Image Classification of CIFAR10 using CNN** IRJMETS Journal Mar. 2022
- Developed a CNN model in Keras and TensorFlow to classify CIFAR10 images with 90% accuracy.
 - Designed a Sequential Model using convolutional, pooling, and fully connected layers for feature extraction.
 - Applied one-hot encoding and data augmentation to enhance model robustness and reduce overfitting.
 - Published findings in a peer-reviewed journal, contributing to advancements in computer vision.

EXTRA CURRICULARS

- Civil Services Aspirants Club Board Member** SNIST, India May 2021 – Mar. 2022
- Spearheaded and organized events such as Mock Parliament and Historical Quizzes
 - Coordinated with a team of 15 members to plan and execute events, developing leadership and project management skills.
 - Fostered awareness of civic responsibilities among students through interactive sessions, enhancing understanding of governance and public policy.
- National Covid Relief Volunteer** MyGov, India April 2020
- Actively raised awareness about COVID-19 safety measures across social media, reaching an estimated audience of 1,000+ individuals and encouraging adherence to health guidelines.
 - Supported national relief efforts by contributing to the PM Cares relief fund, aiding in providing essential resources for pandemic response.
 - Collaborated with other volunteers to promote public health campaigns, helping reduce misinformation and increase public compliance with preventive protocols.
