

Professional Summary:

- Over 8 years of hands-on experience as a Full Stack Java Developer, adept at building and managing complex applications. Actively involved throughout the Software Development Life Cycle (SDLC), including design, development, deployment, and testing of enterprise-grade applications using Java technologies.
- Expert in building scalable REST and SOAP services, implementing business workflows with Spring MVC, Spring Web, and Spring Boot, ensuring high availability and performance.
- Hands-on experience designing secure applications using Spring Security, OAuth, JWT, and role-based access control for enterprise-grade systems.
- Proficient in microservices development using Spring Cloud, Eureka, Ribbon, Hystrix, and Zuul, enabling distributed service discovery, routing, and fault tolerance.
- Skilled in front-end development with Angular (2–4), JavaScript, HTML5, CSS3, Bootstrap, and modular component-driven UI design.
- Developed backend services using Node.js and Express.js, integrating APIs and building reusable modules for cross-platform applications.
- Strong command over Core Java including Collections, Generics, Concurrency, Exception Handling, Multithreading, and JVM performance tuning.
- Experienced with modern DevOps practices, using Git, GitLab CI/CD, Jenkins, Docker, and Kubernetes for automated builds, deployments, and container orchestration.
- Proficient in AWS cloud services such as EC2, EKS, S3, Lambda, SQS, and CloudWatch for scalable deployment, automation, and event-driven processing.
- Built message-driven systems using ActiveMQ, Kafka, and AWS SQS to handle asynchronous communication and high-volume data processing.
- Expertise in Hibernate and JPA building ORM-based data layers with HQL, Named Queries, Criteria API, and advanced caching techniques.
- Strong database experience writing SQL, PL/SQL, stored procedures, triggers, and optimizing queries across Oracle, MySQL, and MongoDB.
- Developed SOAP-based web services using XML, WSDL, JAX-WS, and Spring, implementing request validation, security, and service publishing.
- Implemented microservices security standards including TLS, token-based authentication, secrets management, and IAM-based access control.
- Used Spring AOP and Log4j to integrate cross-cutting concerns like logging, auditing, and performance monitoring across multiple application layers.
- Designed UI screens with JSP, JSTL, and Servlets, creating dynamic server-side pages and MVC-driven workflow implementations in early projects.
- Developed scalable batch processing solutions using Spring Batch, PL/SQL scripts, and scheduled tasks on AWS Lambda and CloudWatch Events.
- Participated in full SDLC including requirement gathering, analysis, design, development, testing, deployment, and production support.
- Created UML diagrams including Use Case, Class, and Sequence diagrams for system design using Rational Rose and similar tools.
- Experienced in Test-Driven Development (TDD) writing extensive JUnit test suites and integrating automated testing within Maven build pipelines.
- Worked in Agile/Scrum environments, participating in sprint planning, daily standups, refinements, retrospectives, and continuous delivery cycles.
- Delivered multiple enterprise applications on AWS EKS, implementing ConfigMaps, Secrets, and infrastructure configuration for cloud-native deployments.

- Troubleshot production issues providing 24/7 support during pilot and go-live phases, analyzing logs, resolving critical defects, and improving stability.
- Designed messaging and integration solutions using MQ-Series, JMS, JAXB, REST APIs, and workflow communication for large enterprise ecosystems.
- Strong collaborator with cross-functional teams, effectively communicating with analysts, QA, business users, and stakeholders to deliver high-quality releases.
- Hands-on experience with relational databases like MySQL, Oracle, MS SQL Server, and NoSQL databases including MongoDB and DynamoDB.
- Familiar with AWS cloud services such as EC2, S3, DynamoDB, Lambda, CloudFront, Simple DB, SQS, ELB, and EBS.

Technical Skills:

Programming Languages:	Java, SQL
Java Frameworks and Technologies:	Servlets, Spring JPA, JDBC, JSP, Struts, Hibernate, Spring Batch, Spring AOP, Spring, Core, Spring IOC, Maven.
Web Technologies:	AJAX, Node.js, JavaScript, HTML5, DHTML, XHTML, XML, React, JSON, jQuery, AngularJS, CSS, Bootstrap, Webservices, REST APIs.
Database:	MySQL, SQL Server, Oracle, PostgreSQL, MongoDB, Redshift.
Code Versioning:	Git, GitHub, Subversion, Perforce, SVN, CVS, Bitbucket.
JavaScript Frameworks:	Node.js, jQuery, AngularJS.
Tools & IDE:	Selenium, Eclipse, NetBeans, Spring Tool Suite, Sublime Text, Putty, IntelliJ, Postman.
Cloud & DevOps:	AWS (EC2, S3, Lambda), Jenkins, Docker, Kubernetes.
Big Data & Streaming:	Apache Kafka, Apache Airflow, Tomcat.
Testing & QA:	Junit, Mockito,
Project Management Tools:	Jira, Confluence, Dora Metrics and Space, Microsoft Project.
Software Methodologies:	Agile, Scrum, TDD.
Operating Systems:	Windows XP, Win 10, 11, Linux, OSX.

Professional Experience:

Client: Citizen Bank.

Feb 2025 - Present

Location: Phoenix, Arizona.

Role: Java Full Stack Developer.

Responsibilities:

- Involved in **analysis, design, and delivery** of technical solutions aligned with business strategy and enterprise architecture.
- Developed **Action Classes** and **Action Forms** for business logic implementation using the **Spring Framework** and a multi-tier **presentation layer**.
- Designed and developed **server-side components** using **XML, JSP, JDBC, JNDI, EJB, and DAO** design patterns within **Eclipse IDE**.

- Implemented **SOAP-based Web Services** using **XML**, **WSDL**, and the **Spring Boot Framework**, including **SOAP Security** for both client and server sides.
- Built **front-end web applications** with **Angular 4** and modular web components using **Node.js**; developed **RESTful services** using **Node.js** for API integration.
- Implemented **Spring MVC**, configuring **Controllers**, **Handler Mappings**, **View Resolvers**, and developing **DAO** and **Service Layers** for reusable and decoupled architecture.
- Applied **Core Java** concepts such as **Collections**, **Generics**, **Exception Handling**, **I/O**, and **Concurrency** to build robust backend business logic.
- Designed modules using **Spring MVC**, **Spring Web Flow**, and **Spring Bean Factory**, applying **IOC** and **AOP** for loose coupling and modular design.
- Utilized **Design Patterns** including **Singleton** and **Flyweight** to improve performance and reusability.
- Implemented **logging and debugging** via **Log4j** and **Spring AOP**, adding cross-cutting concerns like logging and session validation.
- Worked extensively with **Hibernate 3**, writing **HQL**, **Named Queries**, and **Criteria** for ORM and database operations.
- Developed and exposed services using **SOA (Service-Oriented Architecture)** principles.
- Created **JUnit** test cases for regression testing and integrated automated tests with **Maven builds**.
- Authored **SQL queries**, **stored procedures**, **views**, **triggers**, and **packages** to enhance **Oracle Database** performance.
- Wrote **PL/SQL procedures** for batch data loading and validation.
- Followed **Agile (Scrum)** methodologies with short sprint cycles to deliver features rapidly in a **deadline-driven environment**.
- Conducted user discussions with **court analysts** to collect and implement feedback in subsequent release iterations.
- Deployed applications on **AWS EKS**, creating **ConfigMaps**, **Secrets**, and infrastructure configurations.
- Developed **AWS SQS** consumers for message notifications and implemented file operations on **AWS S3 buckets**.
- Used **Git** and **GitLab CI/CD** for version control and automated deployments.
- Collaborated using **Putty** and **Linux terminals** for server management and log monitoring.

Environment: Java, Spring, Spring Boot, Hibernate, JavaScript, XML, HTML, CSS, Angular 4, UML, JBoss, Log4j, JUnit, Maven, Eclipse, Subversion (SVN), Web Services, SOAP, REST, SQL, PL/SQL, Oracle, Linux, AWS (EKS, EC2, SQS, S3), RDBMS, Lambda Functions, Rational Application Developer (RAD), Putty.

Client: Prudential.

Aug 2023 - Jan 2025

Location: Newark, New Jersey.

Role: Full Stack Java Developer.

Responsibilities:

- Developed web and enterprise-grade applications using **Java 11**, **Spring Boot**, **Spring REST**, and **Spring Security frameworks**.
- Created and consumed RESTful web services through Spring **MVC** and Spring Boot for robust service communication.
- Designed and deployed microservices using Spring Boot in combination with Netflix OSS tools (**Eureka**, **Ribbon**, **Hystrix**), Spring Cloud, and deployed them on **AWS**.

- Built **RESTful APIs** using **Node.js** and developed backend logic with **Express.js** to support application functionality.
- Implemented REST web services capable of handling both **XML** and **JSON** formats for flexible client communication.
- Leveraged **Spring MVC** framework to apply design patterns such as Singleton and Factory for scalable application design.
- Constructed the Spring Controller layer with effective dependency injection and handled transaction management efficiently.
- Configured and implemented Netflix Zuul API **Gateway** and **Eureka** Service Registry to enable service routing and dynamic discovery.
- Scheduled Python scripts on **AWS Lambda** using CloudWatch events for automated task execution and monitoring.
- Utilized multithreading techniques to create high-performance components such as data collectors, parsers, and distributors to process real-time **JSON** data from Zacks API. Employed Java's concurrency collections for thread-safe operations.
- Provided 24/7 application support during pilot and production phases, including live troubleshooting, bug resolution, and behaviour analysis during conference calls.
- Developed **RESTful** Web APIs with clearly defined **HTTP** methods (GET, PUT, POST, DELETE) for seamless client-server interaction.
- Authored advanced **SQL** queries, **PL/SQL** Stored Procedures, and Functions to efficiently manipulate and retrieve data.
- Implemented container orchestration using **Kubernetes** to manage **Docker** container deployment, scaling, and lifecycle operations.
- Actively participated in **Agile/Scrum** practices, continuously learning and contributing best practices and insights to the development team.

Environment: Java11, Spring Boot, Spring Rest, Spring Security, RESTful Web Services Spring MVC, Netflix OSS, Spring Cloud, AWS Cloud, Node.js, Express.js, XML, JSON, Spring Netflix API Gateway, Eureka, AWS Lambda, SQL, PL/SQL, Multithreading, Docker, Kubernetes, Agile, Scrum.

Client: State of NJ.

Oct 2021 – Jul 2023

Location: Trenton, New jersey.

Role: Java Full stack Developer.

Responsibilities:

- Involved in all the phases of the portal changes - analysis, design, development, testing and deployment.
- Developed User Interface using the **HTML**, **Bootstrap**, **CSS**, **JavaScript** and **Angular2**.
- Build responsive application using **Angular2** & **Node JS**.
- Implemented **Multithreading**, **Concurrency**, **Exception Handling** and **Collections** whenever necessary
- Developing **REST Web Services** using **Spring boot** to make the application more reusable and loosely coupled
- Designed and implemented **MongoDB** based database and created **REST** enabled Web Services on **Jersey framework**.
- Used **Test driven development (TDD)** approach for application development.
- Involved in writing **JSP** and **JSTL** Tag library to create standard dynamic **webpages**.
- Used spring framework features like **Spring IOC**, **Spring AOP**, **Spring Batch** and **Spring configuration** files are created for **Dependency Injection (DI)**.
- Used a **Micro Services architecture** with **Spring Boot** based services interacting through a combination of **REST** and **MQ** or **Apache Kafka message brokers** and leveraging **AWS** to build, test and deploy Identity **Micro Services**.
- Designed and developed **RESTful** Services to retrieving configuration **JSON** documents related to customer Implemented Persistence layer using **Hibernate** to interact with the **Oracle** database, Used **Hibernate Framework** for **object relational mapping** and **persistence**

- Involved in development of **Spring DAO** layer which invoked database queries
- Experienced with **AWS** services to smoothly manage application in the cloud and creating or modifying the instances.
- Selecting the appropriate **AWS service based** on compute, data or **security requirements** and **Integration of Amazon Web Services (AWS)** with other applications infrastructure.
- Used **Active MQ** to communicate with controller and used service layer to implement the business logic
- Implemented Continuous Integration (CI) using **Jenkins** and continuous deployment.
- Experience working with **Docker** to improve our (CD) Continuous Delivery framework to streamline releases
- Deployed and tested the application in **UNIX** on **Web Logic** Application Server.
- Created **Maven** build file to build the application and Used **Log4j** for debugging, testing and maintaining the system state and Maintained project documents and resources using **Subversion**.

Environment: Agile Methodology, Java, HTML5, CSS3, JavaScript, JQuery, Angular2, Spring Framework, Spring Boot, Microservices, Node JS, SASS, AJAX, JSTL, Spring MVC, DAO, IOC, Hibernate, REST, TDD, Eclipse, PL/SQL, Jenkins, Docker, Oracle, JAX-RS, AWS, JMS, Active MQ, SOA, UDDI, WSDL, Web logic, Agile, MAVEN, Log4J, Micro Services, Subversion, Docker, UNIX.

Client: Global Logic Technologies.

Feb 2019 - Sep 2021

Location: Hyderabad, India.

Role: Java Developer.

Responsibilities:

- Involved in **SDLC**– Requirements gathering, Conceptual Design, Analysis, Detail Design, Development, System Testing and User Acceptance Testing
- Implemented **Use Case Diagrams** and **Sequence Diagrams** during the design using Rational Rose.
- Designed and developed the UI using **JSP, HTML, CSS and JavaScript**.
- Developed application with **Servlets and JSP**.
- Responsible in creating Servlets which route submittals to appropriate **Enterprise Java Bean (EJB)** components and render retrieved information.
- Involved in implementing the **DAO pattern** for database connectivity and used the **JDBC API** extensively.
- Also, worked with the PDF and EXCEL format file download of user data on JSP's when user wanted to save his/her personal data on **JSP page tables**.
- Established connection with **JDBC** to persist data to **My SQL** database.
- Monitored the logs using **Log4J** and fixed the problem.
- The Application was deployed on **Apache Tomcat Server**.
- Involved in build and deploying the application using **ANT**.
- Used Configuration Management Tools for version control which is built on **CVS**.

Environment: Java, HTML, CSS, JavaScript, JSP, Servlet, JDBC, MVC Design pattern, PL/SQL, Log4J, Apache Tomcat server, My SQL, Eclipse IDE, CVS, ANT and Log4J.

Red Rock IT Solutions India Pvt. Ltd.,

June 2017 - Jan 2019

Location: Hyderabad, India.

Role: Java Developer.

Responsibilities:

- Software Development is driven by Agile methodology, short sprints in from of iterations and designed Use case diagrams, Class diagrams, and Sequence diagrams using **UML** and developed using **Java JEE** components.
- Developed client software to consume already published web services.

- Designed and developed services using **JAX-WS, JAXB, Spring IOC, Hibernate**.
- Designed and developed the messaging framework for communication between workflow manager and other Enterprise Applications over **XML** and MQ-Series using **JAXB**.
- Tested developed services thoroughly with **Soap-UI, JUnit test cases**.
- **Log4j** framework was used to debug and trace the application.
- Unit test the implemented code through JUnit before deliver the code to different test phase.
- Provide the support During System test, **E2E Test**, and **UAT (User Acceptance Test)**.
- Written the **shell scripts** to automate the tasks.

Environment: J2EE, Java, SVN, Spring Framework, Hibernate, JMS, XSD, JAXB, JUnit, Web services, WSDL, Maven, Oracle 11g, SOAP, Jenkins, AspectJ, Oracle triggers, WebLogic 11g/12c, log4J, SQL developer, Shell Scripting.
