SUMMARY

- Around 3 years of experience in all phases of Software Development Life Cycle (SDLC) which includes Design, Development, Integration, Business Analysis/Modeling, Documentation, and Testing of all software applications.
- Developed and maintained web applications using Java, Angular, and Spring Boot.
- Implemented RESTful APIs and Microservices architecture for efficient communication between components.
- Utilized TypeScript for front-end development, enhancing user experience.
- Designed and optimized database schemas using Oracle and PostgreSQL, writing efficient PL/SQL queries.
- Collaborated with cross-functional teams using Agile Scrum methodology, participating in SDLC processes.
- Built front-end applications using JavaScript technologies such as ReactJS, AngularJS and NodeJS.
- Developed scalable APIs using Java-based technologies including Java 14 and Spring Boot.
- Ensured software development with focus on security, availability, and scalability.
- Deployed applications on AWS cloud platform, ensuring reliability and scalability.
- Developed full stack applications using ReactJS for front-end and Java for back-end microservices.
- Designed and implemented RESTful APIs for efficient communication between front-end and back-end systems.
- Utilized SQL and NoSQL databases for data storage and retrieval, ensuring optimal performance.
- Developed scalable RESTful APIs and microservices using Node.js, enhancing system performance and modularity.
- Implemented Redis for caching and session management, improving data retrieval speed.
- Experience in Amazon Web Services (AWS) and Jenkins for continuous integration's and builds.
- Utilized Splunk for logging, defect analysis.
- Developed front-end applications using Angular, back-end services using Spring Boot and RESTful APIs.
- Implemented and optimized SQL queries, stored procedures for RDBMS and NoSQL databases.
- Integrated CI/CD processes using GitHub, Bitbucket, Gitlab, Jenkins for automated deployment.
- Created and managed CI/CD Pipelines, Docker deployment in AWS.
- Understanding of API Management with Security, Integration in Azure Cloud
- Deployed Cucumber, Selenium, Playwright for test automation reducing manual testing efforts by 50%.
- Managed version control with Git, tracked progress in JIRA.
- Designed responsive front-end using HTML5, CSS3, Angular.
- Well versed with core Java concepts like Collections, Multithreading, Serialization and Java Beans.

TECHNICAL SKILLS:

Java Technologies: J2EE, Servlets 3.1, JSP 2.1, JSF 2.2, JDBC 3.0, JavaBeans, Web Services (SOAP, WSDL, REST 2.0), Apache Kafka, AWS, XML, JSON, JMS, Spring Batch, Spring Cloud, Swing, Spring Cloud, Spring Framework, Hibernate, JDBC

Application/Web Servers: Oracle/BEA, WebLogic 8.1/9.1/10.3 , IBM WebSphere 5.1/6.0/6.1/7.0 , Jboss, Tomcat 5.0.28/6.0, Jenkins, Cucumber.

IDEs: Eclipse, Spring STS, IntelliJ, NetBeans.

Web technologies: HTML5, CSS3, XHTML, JavaScript(+ES6), TypeScript, Ajax, JQuery, Angular 6, Angular 8, ReactJS, AngularJS, NodeJS, MERN, Socket, ExpressJS, JSON, Swagger UI, Bootstrap.

Version Control: SVN, Stash, CVS, VSS, GitHub.

Database: Oracle 8i/9i/10g/11G, DB2, SQL Server 2008, MySQL, MongoDB, Apache Cassandra.

Spring Tools: Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Boot, Spring Micro services, Spring REST, Spring Eureka, Swagger UI, and Spring Zuul.

Methodologies: Agile, Scrum, RUP, TDD, OOAD, SDLC, Waterfall model.

Testing technologies/tools: JUnit, JMeter, Mockito, Postman

Build Tools: ANT, Maven, Gradle.

Programming Languages: Java JDK 1.4/1.5/1.6/1.7/1.8 , SQL, PL/SQL, Python, Scala, GoLang, SQL, SQL, UML 2.3, ECMA Script, TypeScript

AWS Skills: EC2, S3, RDS, EBS, IAM, AMI, ELB, CLI, SNS, RDS, VPN, NAT, GIT, DNS, Route53, DBA, Dynamo DB.

PROFESSIONAL EXPERIENCE

Client: Portland General Electric (Remote)

Sep 2024– present

Java Developer

Responsibilities:

- Daily client collaboration for sprint updates and stories.
- Designed interactive interfaces using modern tech: HTML5, CSS3, Bootstrap, React.js, Redux, MongoDB.
- Developed and optimized scalable microservices using Scala and Akka HTTP, improving system performance.
- Created scalable Spark apps (Scala/Java) for efficient data processing (RDBMS, streams).
- Integrated Hibernate ORM with Spring MVC for enhanced Oracle interactions.
- Utilized Apache Camel for seamless data transformation.
- Designed and deployed scalable microservices on GCP using Cloud Run, Kubernetes Engine (GKE), and App Engine.
- Designed a scalable ETL pipeline using Apache Spark to process large datasets, improving 40% data ingestion efficiency.
- Integrated Snowflake with Spark to store and query large datasets efficiently, and optimized performance using caching.
- Developed unit/integration tests (JUnit, Mockito) for Microservices in Docker/Kubernetes.
- Utilized Docker and Kubernetes for containerization and orchestration of applications.
- Implemented and executed test cases using JUnit and Cucumber to ensure code quality and reliability.
- Managed batch jobs using AutoSys and deployed applications in Linux-based environments.
- Conducted performance testing and fine-tuning API response using tools like JMeter and Postman.
- Optimized database performance by designing normalized PostgreSQL schemas, advanced indexing, and query optimization, reducing latency by 30%.
- Implemented Redis for caching and session management, improving data retrieval speed and handling high user concurrency effectively.
- Used Datadog Profiler to identify and resolve performance bottlenecks, improving API latency by 70%.
- Designed, coded, tested, debugged, and documented projects and programs in J2EE, React.js, and Spring Framework.
- Reviewed and analyzed complex technology solutions for tactical and strategic business objectives, ensuring alignment with industry best practices.
- Collaborated with key technical experts and senior technology team to resolve complex technical issues and achieve goals.
- Mentored peers and led projects, demonstrating strong leadership and collaboration skills.

Environment: Java, HTML5, CSS3, jQuery, Ajax, Angular JS , Bootstrap, JSON, J2EE, Spring Framework, Spring MVC, Spring Security, Spring Boot, Spring Data, JSP, Hibernate, , RESTful, Stored Procedures, RAD, WebLogic, Unix, XML, Agile/Scrum Methodology, Scala, Swagger, Docker, Elastic search, Kafka, AWS, Linux, Maven, Pivotal Cloud, Git, JIRA, Junit, Microservices, TDD, MongoDB, Angular JS

Client: Wipro, Ericsson, India Hyderabad
Java Developer

Aug 2021 – Dec 2022

Responsibilities:

- Implemented RESTful APIs and Microservices architecture for efficient communication between components.
- Utilized TypeScript for front-end development and enhanced user experience.
- Designed and optimized database schemas using Oracle and PostgreSQL, writing efficient PL/SQL queries.
- Developed the Java Code using NetBeans as IDE.
- Collaborated with cross-functional teams using Agile Scrum methodology and participated in SDLC processes.
- Developed and maintained web applications using Java, Angular, and Spring Boot.
- Implemented a Continuous Delivery pipeline with Docker, Jenkins and GitHub and AWSAMIs. Converted our staging and Production environment from a handful AMIs to a single bare metal host running Docker.
- Utilized Splunk for logging, defect analysis.
- Built real-time, event-driven architectures using Kafka, streamlining inter-service communication and processing real-time data streams.
- Automated cross-browser UI testing using Playwright, reducing manual testing efforts by 50% and ensuring application reliability across multiple browsers.
- Developed several JSON APIs using Ruby on Rails framework.
- Implemented and managed data pipelines using Snowflake for a large-scale data warehousing project.
- Used AWS S3, RDS, JSP to store code bundles to deploy onto EC2 Instances.
- Worked with OpenShift platform in managing Docker containers and Kubernetes Clusters.
- Developed scalable APIs using Java-based technologies including Java 12 and Spring Boot.
- Ensured software development with a focus on security, availability, and scalability.
- Utilized MongoDB for efficient data storage and retrieval.
- Deployed applications on AWS cloud platform, ensuring reliability and scalability.
- Developed full stack applications using ReactJS for front-end and Java for back-end microservices.
- Designed and implemented RESTful APIs for efficient communication between front-end and back-end systems.
- Developed and maintained Java-based applications using Spring Boot and Microservices architecture.
- Implemented front-end components using Angular for user interface development.

Environment: Java 1.8, Eclipse, J2SE, J2EE, JAX-RPC, JSP, HTML5, CSS, JavaScript, jQuery, AJAX, XML, Servlets, APEX Triggers, SOA, JBoss Fuse, Struts, Hibernate, Spring MVC, Spring Boot, RESTful Web services, Microservices, PL/SQL, Oracle, ANT, CVS, JUnit.

Client: Xcilica, Hyderabad, INDIA
Software Engineer

Jan 2021-June2021

- Developed efficient RESTful APIs using Spring Boot and Cassandra, optimizing request handling, reducing payload sizes,
 - Contributed to the development of web applications using JAVA, Spring MVC, JavaScript, Ajax, JQuery, Hibernate, etc.
 - and enhancing API response times through pagination and compression techniques.
 - Improved integration testing coverage using JUnit and Mockito by implementing data-driven test cases, reducing manual
 - Utilized AWS (EC2, S3) for cloud-hosted solutions, enhancing application scalability and reliability.
 - Designed mockups and test cases for new modules, driving successful development iterations.
 - Developed code to call web services/APIs using jQuery/AJAX to fetch data and populate the UI.
 - Deployed the applications on AWS Elastic Beanstalk.
 - Used SPRING framework to support Hibernate tool and Struts.
 - QA efforts, and enhancing overall software reliability.
 - Transitioned key functionalities of a legacy B2B FinTech application from a monolithic to a microservices architecture,
 - enabling a scalable distributed system capable of handling 10.3M+ user data efficiently.
 - Implemented key performance metrics within an Agile framework, improving system monitoring and performance analysis.
 - This resulted in a 40% increase in response time visibility, enabling the team to make informed decision-making.
 - Created a Python-based dashboard that consolidated key metrics, enhancing data visualization and accessibility for 20+ stakeholders. Streamlined reporting processes and strengthened data-driven decision-making.
-
