PROFESSIONAL SUMMARY

Results-driven Software Developer with 3 years of experience in designing and implementing scalable software solutions. Proficient in Java, JavaScript, with experience in Spring Boot, Node.js, React. Skilled in backend development, API design, and database management. Passionate about solving complex problems, optimizing performance, and driving innovation through clean code. Strong collaborator with experience in working in cross-functional teams to deliver high-quality solutions. Seeking opportunities to contribute technical expertise and build impactful software products

EDUCATION

Stevens Institute of Technology, New Jersey, USA

Master's in Computer Science

- **Courses:** Data Mining, Web Programming, Agile Software Development, DBMS, Cyber Security, Advanced Algorithm

TECHNICAL SKILLS

- **Programming Languages:** Java, Python | **Web Technologies/Frameworks:** HTML, CSS, React.js, TypeScript, JavaScript
- **Backend Technologies:** Node.js, Spring Boot | **Database Technologies:** SQL, MySQL, PostgreSQL, MongoDB | **API Technologies:** RESTful APIs
- **Cloud Platforms & Technologies:** AWS, Docker | **Version Control:** Git, GitHub | **API Testing:** Postman | **Methodologies:** Agile, Waterfall, Scrum
- **Project Management / Collaboration Tools:** Jira, MS Project, MS Excel, Slack | **IDE:** IntelliJ IDEA, Visual Studio Code, Eclipse

PROFESSIONAL EXPERIENCE

Graduate Teaching Assistant: Stevens Institute of Technology, Hoboken, NJ, USA

Sep 2023 - May 2024

- As a Teaching Assistant for CS 590 Algorithms, guided a cohort of 50 students through hands-on sessions covering **algorithm design, data structures, and object-oriented programming**; personalized mentoring led to a 15% improvement in exam performance.

Software Developer: MatCut Enterprise, INDIA

Aug 2020 - Aug 2022

- Redesigned a monolithic **Node.js** backend by splitting user and billing logic into microservices connected via **RESTful APIs** and backed by modular database tables, simplifying deployments and reducing downtime during feature releases.
- Improved **API response times by 10%** by profiling slow database queries and optimizing async data-fetch logic, which lowered latency during peak hours and stabilized user interactions.
- Helped the team adopt **Agile practices** using **Jira and Git**, which improved sprint visibility and coordination between backend and frontend, leading to **faster delivery** of integrated features.
- Designed and built **RESTful APIs in Node.js** to serve project and user data from a shared relational database, reducing frontend dependency bottlenecks and **cutting API-related support tickets by ~20%**.

Junior Software Developer: Zeronsec, INDIA

Feb 2020 - July 2020

- Built **REST APIs in Spring Boot** for an internal onboarding portal, **reducing manual HR data entry by 40%** and increasing processing speed.
- Tuned **MySQL** performance by indexing high-traffic tables and simplifying complex joins, **resulting in a 25% improvement** in API response time.
- Refactored controller and service-layer logic to remove code duplication and improve maintainability across key modules.
- Collaborated with frontend and QA teams using Postman to test and debug endpoints, ensuring smoother UAT and MVP delivery.

TECHNICAL ACADEMIC PROJECTS

Receipt Processing API (Java, Spring Boot, Docker) [GitHub Link](#)

- Engineered business logic for receipt validation and reward point calculation, achieving **95% accuracy** in transaction-based reward distribution with robust test coverage.
- Developed a RESTful API capable of processing **100+ API requests per second**, leveraging DynamoDB for in-memory data storage.

Apartment Scout (HTML, CSS, JavaScript, MongoDB, Node.js) [GitHub Link](#)

- Developed a web application for international students to find verified accommodation, improving the user search experience through efficient database indexing. Implemented a **real-time chat feature**, improving student-landlord communication and leading to a **15% increase in user engagement**.
- Optimized **MongoDB queries** to reduce data retrieval time by 25%, ensuring **scalability and performance** under high user loads.

Baby Care Web App (HTML, CSS, JavaScript, React.js, Spring Boot, AWS, MySQL) [GitHub Link](#)

- Led a team of **five developers** as Scrum Master, applying Agile methodologies to accelerate development by **50%** through structured sprint reviews and continuous integration.
- Engineered role-based access controls and encryption(name of it) protocols, achieving a **95% success rate** in preventing unauthorized data access.
- Developed **interactive dashboards** and tracking features, enabling parents to monitor baby care activities in **real-time** while ensuring seamless backend integration with **Spring Boot and MySQL**.
