

Jaya Preethi Talari

Business/Data Analyst

Email: jayatal55@gmail.com || [LinkedIn](#) || Mobile: +1 7082638411 || Chicago, IL

Summary

- Over 3+ years of experience as a Business Analyst with excellent understanding of business requirements gathering, business analysis, business process modeling.
- Strong knowledge of Business intelligence, Data warehousing and business architecture.
- Proficient in ETL pipelines development using PySpark, including data ingestion, transformation, and reporting using SQL server integration services (SSIS), Tableau and Power BI.
- Designed and maintained dashboards and reports to track KPIs, monitor performance and identify trends.
- Expertise in Microsoft solutions, including Power BI, Azure Data factory and Azure Data bricks, enhancing data visualization and business intelligence capabilities.
- Proficient in developing automated ETL/ELT pipelines processes for Power BI event logs, streamlining data extraction, transformation and reporting.
- Strong background in Data Lake architecture optimization, improving storage efficiency and reducing retrieval costs for structured and unstructured data.
- Hands-on expertise in real time and distributed data processing using AWS Glue, Lambda, Redshift, Snowflake, Google Big query, Dataflow and Pub/Sub.
- Extensive experience in Azure data pipeline development, automating process with power automate and Microsoft Fabric pipelines.
- Deep understanding of SQL and NoSQL databases, ensuring data governance, compliance and efficiency in handling large scale datasets.
- Good experience knowledge in python like Pandas, NumPy and Matlab.
- Comprehensive knowledge and experience in software development life cycle (SDLC) with business process models, Waterfall & agile (scrum) methodologies.
- Proficient in creating various documents like Business Requirements Documents (BRD), Functional Requirements Documents (FRD) and Functional specification Documents (FSD).
- Expert at interacting with stakeholders, subject matter experts (SMEs) and end-users to understand, analyze, communicate and validate requirements using Joint Application Design (JAD), Joint Applications Review (JAR) sessions.
- Hand-on experience in data cleaning, transformation and validation to ensure data accuracy and consistency.
- Passionate about solving business problems through data and continuous process improvement.

Technical Skills

- **Documentation Tools:** Microsoft Office (Word, Excel, PowerPoint)
- **Data storage and Databases:** Azure SQL Database, Azure synapse Analytics, Delta Lake, MYSQL, MS Access, Oracle, PostgreSQL, DBMS, Azure Databricks
- **Data Visualization Tools:** Tableau, Power BI, Looker studio, KPIs
- **Web Technologies:** HTML, Weka
- **Operating System:** Windows
- **Data Analysis:** ETL (Extract Transform Load)
- **Project Management:** Jira, Visio, Agile Methodologies, Scrum Master

- **Cloud Platforms:** GCP (Dataproc, Big Query, Cloud storage, Pub/sub, Cloud Functions, Cloud Composer)
- **Security and Compliance:** Data Governance and security policies, Row level Security, Data masking, Role-based Access Control (RBAC), Identify & Access Management (IAM)
- **Data Engineering and ETL Tools:** SQL Server Integration Services (SSIS), Snowflake, Snowflake queries and data warehousing, Row-level security and data masking, Microsoft Fabric, GCP Dataflow, Azure Functions, Big Query, PySpark, Dataflow, Delta Lake, Pub/Sub

Education

MASTER OF SCIENCE IN BUSINESS ANALYTICS | MAY 2024 | LEWIS UNIVERSITY, ROMEOVILLE, ILLINOIS

BACHELOR OF TECHNOLOGY | MAY 2020 | ANDHRA UNIVERSITY, VIZAG, ANDHRA PRADESH, INDIA

Professional Experience

JOB ROLE: JR. DATA ENGINEER

Client: Walmart -Chicago, Illinois

October 2024-Present

Roles & Responsibilities:

- Extensively used SAS and SQL for extraction, transformation and loading of data from large scale RDBMS like Oracle and DB2.
- Migrated workflows to GCP, developed ETL pipelines using Cloud Storage and Big Query, and automated data validation with python and Cloud Function.
- Designed scalable pipelines with Dataflow, orchestrated workflows with Cloud Composer and implemented.
- Architected distributed workflow with Dataproc and PySpark, built real-time streaming pipelines with Pub/Sub, deployed predictive models using Vertex AI, and automated infrastructure provisioning with terraform.
- Conducted data manipulation using merging, appending, concatenating and sorting datasets in SAS.
- Involved in administration of data warehouse using warehouse administrator functionality of SAS.
- Researched and studied customer spending habits spanning several merchant categories and identified and formed a baseline for launching several merchant centric marketing campaigns and incentives and resulted in the creating of merchant dashboards used by product executives monthly.
- Created and implemented detailed staffing model for security solutions business to evaluate and optimize internal and subcontractor staffing requirements based on the observed and forecasted backlogs, pipelines and historical demand analysis using time series forecasting and optimization models.

- Operationalized and automated end-to-end staffing tools on the AWS cloud using Python & Tableau in conjunction with the cloud architecture team to communicate model outputs and insights with business partners.
- Developed and implemented end to end Data analytics and machine learning pipeline for cloud compute and architecture organization.
- Designed and implanted time series forecasting models for estimating server provisioning on the cloud environments which resulted in accurate demand forecasting for cost optimization and budgeting.
- Proactively determining performance issues and reducing downtime.

JOB ROLE: SENIOR BUSINESS ANALYST

Client: VENGA Software Solutions pvt ltd.

November 2019-May 2023

Roles & Responsibilities:

- Gather and analyze business data to identify trends and patterns.
- Create interactive dashboards and reports using Power BI, Tableau, or Looker.
- Developed the BI Strategy and a 3-year BI roadmap in alignment with the corporate goals.
- Led the tool standardization exercise to minimize the BI tools used in the organization.
- Led and managed an enterprise-wide effort of identifying the Key Performance Indicators (KPIs) across all the domains of the organization. These KPIs will be used to develop a corporate dashboard to facilitate fact-based decision-making.
- Leading or facilitating joint design sessions with business users and reporting staff.
- Conducting data profiling to identify and analyze data quality issues.
- Building and maintain relationships with business partners to keep their active engagement in the BI projects using Agile Methodology and scrum.
- Write SQL queries to extract, transform, and analyze data.
- Collaborate with stakeholders to define KPIs and reporting requirements.
- Work with stakeholders to align BI strategies with business goals
- Provide actionable insights to optimize business operations and strategy.
- Develop and maintain VISIO process diagrams.
- Have launched several data quality improvement initiatives in the organization like establishing the data governance and data stewardship structure and documenting the end-to-end data flow from the source system to the data warehouse.

Academic Project

COMPREHENSIVE ANALYSIS OF “THE US SHARK TANK” INVESTMENT DYNAMICS

- Investment Strategies: The show provides a transparent view of investor strategies and market preferences.
- Entrepreneurial Insight: Entrepreneurs gain valuable insights into market demands and investor expectations.
- Impact on Business Growth: Investment dynamics from "Shark Tank" have significantly impacted startup growth trajectories.

- Market Evolution: The shift towards tech and health investments indicates changing market dynamics and a growing investor appetite for innovation.
