

Jaya Gowthami Priya Nidumoli

Full Stack Engineer

Chicago, IL | priya@theworkmails.com | 312-399-4923

SUMMARY

- Full-Stack Engineer with Around 5 years of experience in designing, developing, and deploying scalable web applications and enterprise solutions using Java (8/11/17), Spring Boot, Spring MVC, and modern front-end frameworks (React.js, Angular).
- Expert in building RESTful APIs and secure backend systems using Spring Security, OAuth2, and JWT. Skilled in implementing role-based access control (RBAC), authentication, and authorization mechanisms to ensure safe and reliable application workflows.
- Strong expertise in event-driven architectures and messaging systems, leveraging Apache Kafka, RabbitMQ, and Google Pub/Sub to design robust, real-time communication between distributed services and microservices.
- Proficient in database design, optimization, and management using PostgreSQL, MySQL, and MongoDB, including designing efficient schemas, writing complex queries, and ensuring data integrity for high-volume, data-driven applications.
- Knowledgeable in database design, optimization, and management using PostgreSQL, MySQL, and MongoDB, including designing efficient schemas, writing complex queries, and ensuring data integrity for high-volume, data-driven applications, leveraging Cloud platforms (AWS and Azure) for database hosting.
- Skilled in Agile development methodologies, Test-Driven Development (TDD), and automated testing frameworks such as JUnit, Mockito, and PyTest, ensuring robust code quality, maintainability, and reduced production issues.

EDUCATION

Master of Science in Computer Science

Governors State University, University Park, IL

Bachelor of Technology in Computer Science (Cloud Computing)

SRM Institute of Science and Technology, Chennai, IND

SKILLS

Programming Languages: Java (8/11/17), Go, Python, SQL, JavaScript, TypeScript (Advanced), C#

Frameworks & Technologies: Spring (Boot, MVC), Spring Data JPA, Spring Cloud, .NET, AstroJS, Koa.js, NX Monorepo, React.js, Angular, Next.js, Redux, GraphQL

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, NoSQL Databases

Security & Compliance: Spring Security, OAuth2, JWT, RBAC, OWASP secure coding, API Security, Keycloak

Web Technologies: HTML5, CSS3, Tailwind CSS, Bootstrap, RESTful APIs, WebSockets, JSON, XML

Messaging & Event Streaming: Apache Kafka, RabbitMQ, Google Pub/Sub

CI/CD & DevOps Tools: Gradle, Jenkins, GitHub Actions, GitLab, Bitbucket Pipelines, Docker, Kubernetes, Helm, ArgoCD, Terraform

Testing & QA: JUnit, Mockito, Postman, Swagger/OpenAPI, Pact (Contract Testing), xUnit, NUnit

Cloud & Infrastructure: AWS (API Gateway, EC2, S3, CloudFormation, CloudWatch, EKS, SNS, SQS), Azure (App Services, AKS)

Design & Methodologies: Agile (Scrum, Kanban, SAFe), Domain-Driven Design, Clean Architecture, Object-Oriented Design (OOD), Dependency Injection (DI), Inversion of Control (IoC), Configuration Management, Caching

PROFESSIONAL EXPERIENCE

S&P Global, USA

Jan 2025 – Present

Full Stack Engineer

- Designed and deployed AWS infrastructure using CloudFormation templates and Terraform for automated provisioning and versioned infrastructure management.
- Built and maintained AWS CodePipeline and CodeBuild workflows for automated build, test, and deployment cycles, improving release reliability by 30%.
- Automated infrastructure monitoring and incident response with CloudWatch metrics and Lambda triggers for auto-remediation.
- Developed Bash and YAML-based scripts to automate deployment, log management, and scaling activities in AWS environments.
- Integrated SSO authentication using SAML/OIDC protocols for secure internal application access without third-party tools.
- Integrated OAuth2 authentication with AWT-based applications for desktop-level secure access, ensuring seamless Single Sign-On (SSO) experience, which increased productivity of end-users by 32%.
- Deployed and managed containerized workloads in ECS and EKS clusters, improving system scalability and reducing manual deployment steps.
- Effectuated asynchronous communication workflows using RabbitMQ, improving system throughput by 35% and reducing API response latency by 40% in high-traffic production environments.

KPIT, India

Jun 2019 – Nov 2023

Full Stack Engineer

- Implemented infrastructure automation and CI/CD pipelines for backend services using AWS CodeDeploy and Jenkins, reducing manual intervention by 40%.
- Developed backend microservices in Node.js and TypeScript, leveraging AWS Lambda for serverless execution of compute-intensive tasks.
- Managed API Gateway and Application Load Balancer (ALB) configurations to optimize routing, load distribution, and latency across multiple environments.
- Boosted RESTful APIs by leveraging AWS API Gateway, implementing caching, throttling, request validation, and efficient routing strategies, which significantly reduced API latency by 35%, and enhanced system scalability for high-traffic applications with concurrent users.
- Enhanced system observability using AWS CloudTrail and ELK Stack, improving incident resolution time by 25%.
- Generated API-first development approach with Swagger/OpenAPI specifications, resulting in 50% faster feature delivery and enhanced cross-team communication with stakeholders.
- Collaborated with DevOps teams to enforce security compliance and IAM best practices, ensuring least-privilege access and encryption-in-transit policies..

Certifications

- Problem Solving, Python, Java, SQL – Hacker Rank Badges
- Google Cloud Fundamentals & AWS Professional Training – Coursera
- AWS Training & Certifications – Credly Badge

PROJECTS

Insurance Claims Automation Platform | Java, Spring Security, MySQL, Kubernetes, JWT

Apr 2024 - Aug 2024

- Developed RBAC-protected claim workflows, cutting manual verification time by 60% through automated validation rules.
- Maintained 99.95% uptime using Kubernetes orchestration and multi-region AWS deployment strategies for robust failover.

Wealth Advisory Portal | Java, Spring Boot, Angular, AWS (EC2, ELB, S3)

Jan 2024 - May 2024

- Engineered secure investment platform serving 200+ clients with Spring Boot microservices and Angular frontend, improving data sync by 45%.
- Deployed scalable infrastructure on AWS EC2 with auto-scaling and ELB, ensuring 99.99% uptime and high availability.

Cloud Infrastructure Automation | AWS, CloudFormation, Bash, Terraform

Oct 2023 - Dec 2023

- Built reusable IaC templates in CloudFormation and Terraform to automate provisioning of compute, storage, and networking resources.
- Created automated CI/CD pipelines with CodePipeline and CodeBuild to enable continuous integration and zero-downtime deployment
- Integrated monitoring dashboards in CloudWatch and Grafana for proactive system health tracking and alerting
